Hello!

You might want to try Hi Tech Software. They made business software for the
Atari called "Sales Pro" that does much of what you want.

I don't have the address for them right at hand but will try to dig it up along
with a telephone number for you if you're interested.

Um, yes and you'll get other answers too. I suggest the easiest way is to
find a "MONITOR MASTER" or a "VIDEO KEY" THere are used ones for sale cheap.
I think I even have both:-) but not for sale:-(.

> I do plan

Uh, yes of course. So, I will email you the Greek JPEGS of the statues in
Greece that show a BIG LARGE HORSE COCK, SHOVED UP A YOUNG 14 YEAR OLD ...
ASS,,, um, I think the topics we speak about are a little different:-).
Religion has nothing to do with my email and the intrusion of spam into
this valuable newsgroup. Red Anals are not the same as what you are speaking
of. Clearly there is a SPAM problem here, and this is my frustration.
The porno is brutal, the IBM computers sales annoying. The Get rich schemes
are made for someone named James:-).

A good post nonetheless, but the Atari related part has to do with the intrusion
into my home. If I going looking for anything, that is different, but when
someone shoves a smelly hole in front of me I am offended. I am not looking
for this when in Comp.sys. anything... and I don't need to be told where to
find it. I spend enough valuable time looking for it on my own.

Well, I got it here on the 22:nd of february! so the message is sent out to
other news-servers!

Perheps the news-server you are using only post the messages 1 time a day?
that could be one of the reasons that takes it so long time to get through?

> your URL is a bit interesting. STinG can resolve and trace, but CAB can't
> load your Web page. Server down???

Well, the URL that is in there is only a redirection, which I hope (IF
anyone links to my page) will be used, the www.alfaskop.net/~faltrion/ that
it links to might change, but the faltrion.home.ml.org will not.

There might be 3 problems here with why you might not reach teh site.

1) the ml.org machines might be down, and can therefore NOT redirect CAB to
the real adress.
2) The alfaskop.net server might be down, and therefore cannot send you the
page (I know that alfaskop has had some problems with its
Internet-connection the last month, but they are working on it.
3) the CAB.OVL that you are using might be old, and therefore do not
understand that the page is beeing redirected to alfaskop.net
(this however I think is not likely, since the redirektion has been in
there for a LONG time now)

Anyway, I hope that you will like what you see whenever you get there...

> link doesn't exist on the server.

Hmm that is strange, it should not bee that slow, my ISP uses a 2Mb
connection, and the have pretty fast computers for the WEB-server, so even
if there were plenty of them trying to access web-sites on alfaskop.net it
should not take so long.. however there might have been a lot of people
online at the time you called since after 18:00 there is cheaper phone
costs, and most users get online arond this time.
However I got 2 picture-links to outside servers that might slow things
down.

About the firecall.lzh file, I'm not sure why cab cannot find it, it should
be there..... hmm I'll have to look into this.

Well what your ISP can do has not so much affect as you can think ,there are
a LOT of machines it got to pass through on the way, and if only one of them
is having a bad day, well that's it :)

> I have VERY mixed emotions about Christians Web site. First, his ISP
> "stinks on ice". No way resolving should take this long ;(On the other

> a survey, which unfortunately CAB couldn't respond too. Many links were well
> setup. The main problem is as you mentioned. FireSTorm isn't released on
> his links ;(Why???

FireCall :)))) Not FireSTorm :))))

Anyway, at the moment you can use the htp://www.aflaskop.net/~faltrion
adress, but since this adress might change (ie if you do not get any
repsonce from this site in the future) you should try the
http://faltrion.home.ml.org adress from time to time since that one will
always point to the real site :)

Also FireNews/Babel is not release on my pages at all, but this might change very
soon :) there are some minor bugs to be fixed first....
Then you have a new news-package with a little difference from Newsie...

Anyway, about the slow connections, I know of 2 problems why this might be,
and I'll see if I can fix it...

Maybe. Jo uses a Crazy Dots 15 bits card (ET4000) with NVDI 4.11
graphic card driver on his TT030. I on my Hades uses a Herkules ET6000
4 mb card. As driver I use the Nova-VDI of Computerinsel (modified by
Medusa).

Yep. That's why I added the time in my posting. The day after I went
once more to your site but now after 22.00 and with the proxy server
disabled. Now I tooked me 3 min before I had the page on my screen.

3663. Having problems to connect with STinG...

Newsgroup: comp.sys.atari.st
Date: 1998-02-22 00:00:00 UTC
From: Yann Lossouarn <tannoz@mygale.org>
Message-ID: <6cq6a4$7j$1@news4.isdnet.net>
Source record: 107059

First, I wasn't able to use Sting under MiNT : it makes it lethally crash everytime I run it before the MINT.PRG.

Then, under TOS, I achieved to connect to my ISP, but the transfer speed is _really_ low, as I wasn't able to view my ISP's homepage, within an 8 minutes connection, even without the pictures... :-(The connection rate should have been 33.6 Kb/s...

I used HSMODEM7 (DRVIN + SCC, default parameters), and dialed in PPP, with compression.

Last : I wasn't able to use CAB2DEMO to connect, even with the CAB.OVL file copied to CAB and CAB/MODULES directories...

Heeeeelp !!! :-)

Yann

By DMA, do you mean ACSI, the Atari hard disk port? Do you at least have
the manual or the data transfer spec? And does anyone know of any
drivers for TOS or, more importantly, Linux or MintNet support?

Dan

3668. POPwatch 2.50 now available

Newsgroup: comp.sys.atari.st
Date: 1998-02-22 00:00:00 UTC
From: gary@the-gap.demon.co.uk
Message-ID: <47525637_000003_OASIS_NEWS@the-gap.demon.co.uk>
Source record: 107064
Cross-posted to: comp.sys.atari.st,demon.ip.support.atari

The latest version of POPwatch is 2.50 and is available from my web site.

Some of the changes since 2.42 are as follows:

*New Statistics Window shows how many emails have been sent,
retrieved, rejected, and killed. Also shows size of HISTORY file by
number of message-id entries.

*Writing and checking of HISTORY file can be turned off within
General Preferences.

*When sending email's from NEWSie, the signature is now not prefixed
with '--'. See POPWATCH.TXT for more details.

*No longer hangs when sending email from NEWSie and appending a
signature file that doesn't end in CRLF.

*If no 'To:' field is found within the header of an incoming email, then
POPwatch defaults 'postmaster' as the To: address. In practice, this
only benefits people who download email in the NOS format. In which
case, the email is deposited in the postmaster mailbox. This will
either be postmaster.txt or can be overidden by use of the 'alias'
file.

Also available are the French,Swedish, and Italian RSC's for 2.50.

Regards,
Gary

3669. Sting SERIAL.CPX and TOS 3.05

Newsgroup: comp.sys.atari.st
Date: 1998-02-22 00:00:00 UTC
From: Kenneth Medin <kennethm@tripnet.se>
Message-ID: <01bd3f30$6a4c3040$LocalHost@default>
Source record: 107106

Iï¿½m having some troubles setting up a friends TT for Internet use. With only the hsmoda7 progs in the auto folder (in correct order) when I try to save port speed configuration in SERIAL.CPX after some delay I get the message "Drive U is not responding". If I change the running order for SCC.PRG and MFP.PRG I get a total freeze when SERIAL.CPX loads. Is this a bug in TOS 2.05? Any workaround?

When I run OEXPORT.TTP from Okami 1.33 I get the same "Drive U not responding" alert though only when runned under Geneva! If I boot without SCC.PRG this does not happen!

Apart from this both Sting, CAB, Popwatch, Newswatch and Okami runs pretty well at 19200bps on Modem 2

You could try offering your services to people, a large number of people don't have internet access and might want to get things from the net, you could charge for that, even if it's just enough to cover your phone bill. Unless of course you are on limited access.

Kev AKA AtariMad on decent IRC servers and not bloody virgin servers which are crap.

There was some discussion about this a little bit ago, yeah. I personally don't think Wizztronics is being very smart about this, either. According to their web page, they had a working prototype of the Hawk, and twice "decided to make it hard on themselves" and do something better, scrapping their working ideas for the new, distant, and more difficult ones. What they should have done was instead of getting frustrated with their new-and-improved ideas, they should have released what they had, which looked pretty good from the specs. And so they scrap that to make yet another of many Atari clones in the works from various companies. I have this feeling that just maybe they will decide that their "new" machine isn't good enough, and the cycle will continue. I don't think they'll every put any of these things on the market unless they do something with what they have now.

For me under STinG, ASCII uploads (like HTML) always end up to be 0 bytes
by the time they get on the server. Binary uploads always end up with
missing bytes (incomplete files). Tested with both AFTP and NEWSie. I
have to boot STiK to upload.

Your results are exactly the same as what I see. Jo Vandeweghe also
viewed the page with the same results. Perhaps the problem is related to
our video cards? The reason I suspect this is that a stock Falcon user
told me the colors match perfectly.

I don't have this happen off the bat. It will happen after a number of searches in a row. I have learned to follow the upper header on the URLs and you can pretty much predict when you can be in trouble:-). However you should be able to do a search for certain.

I was somewhat ticked by this however I have been using Internet Explorer at the library and it crashed 5 times in 2.5 hours while doing searches. At which point I realised I have fewer problems with Cab 1.5:-).

>default.cfg?
><< Neil >>

Thanks Neil for the reply. They deleted my old email and now everything is working as it should. Essentially after receiving a large file in mail, the next file would not arrive, and the EOF bad handle messages appeared in the log after this point. It is like being offline afterwards, yet all other functions work. So, I escaped in NEWsie past my large file to look at the other email messages and each message would contain the previous emails including the large file and any post large file messages.

example:
Message one 2k
message two 1k
message three 900k
message four ..... EOF,bad handle.
message five ......EOF bad handle.

Ok, so I skip past message three to message four.
Message four contains messages 1,2,3 and a new message in 4.
Message five contains messages 1,2,3,4, and new message 5.
These messages will be over 900k each obviously.
after receive each message whether four or five I will get
the EOF bad handle error.
This got ugly as I had 14 messages past the 900k message and therefore lost them all as I wasn't about to download each message as an over 900k file:-).
I also could not delete them.

So, I asked my IP to delete them and they did, and now everything works as it should. However I haven't received a large file yet, so who knows.

Now to answer the technical part. No I haven't put anything in the default.cfg file of STing. I thought that putting it in NEWsie the POP3 stuff was adequate. Should I do this? Anything else I should do? Should I do this for CAB.OVL too? Maybe this is why I cannot get the email stuff to work in CAB;-).
Anyways, NEWsie has worked fine for over 4 months now, (Gee, I feel like a veteran now), and I have had no reason to believe I have anything set up wrong. So if it works why change it.

I think they shuffle large files to another server, but I am not certain.
Would editing the default.cfg fix this?
I don't have a POP3 or POP listed in the file, I may add this if you think
it is a must. Also really should I put anything else in the default file now
that we are on the subject? Such as IRC, ect.

Oh no my ignorance prevails again:-).
Well, I got all this stuff working by myself so I have a right to be confused:-).

Thanks Neil,
later
Brian from Brantford,
Home of Wayne Gretzky and not an Olympic Gold Hockey medal:-(.

Just a note, I found with that earlier version of STing you didn't need
to reboot. Just clear the IP address that was given from the dialer and
you could redial without getting disconnected. Of course not knowing any
better at the time, I thought this was how things worked:-).

Its not the porn I find offensive. It is the aggressive marketing of it in non
related newsgroups and sending it to me directly by email. What it my 10 year
old daughter, logged on to get her email, or Barbie doll newsgroup, and read
messages on Anal intercourse? For me this is an Atari Newsgroup and I want it
to be just that. (I don't have a daughter by the way:-). Although more offensive
in nature, I dislike normal spam behaviour in general.

>but at the same time I do
>want to protect the rights of others.

Well, think of your own rights first. I want the right to see porn and buy computers
and I also want the right to restrict their marketing in my limited email
account.

In Canada it is against the law to send unsolicited faxes. Heck some people
I know are getting over 25spams a day in email, without a filter. We used to
have a serious problem of bussinesses receiving many, many, many ,many
unsolicited faxes. Now this problem appears to have virtually dissapeared.

I hate seeing more spams in announce and demon.ip than atari related messages.
Anyways, enough for now, its just these messages also don't need to be graphic.

Brian.

>

Well that is interesting. I found an A 500 useless, for animation, and I
wondered how they got some of these games to maintain the proper fps when
ever I used Dpaint, the Frames Per Second changed depending upon the complexity
on the screen at the time. Having never played any of these games linked
I am surprised they can move data fast enough to be enjoyable with a serial
link? However, since hooking up the ST with midi cables I have been a network
link game freak:-) and I don't play games:-). I also found the Midi Cables
seem to almost work with RVF before it locks up.
Thanks for your input. I will talk later.

Photochrome is really nice on the STe. SOL author may have left, but can I still
get a full version? I appreciate good efforts and good software.

>Gemview is/was at v. 3.17 AFAIK, but the save JPG option is only available when
>running in Truecolor, when I'm doing 256-colors it ain't there...
>And as far as I got the msg, Mr. Vollbeding is residing on another planet.

hahaha. For Gemview, I am again interested in getting the key, so I don't
have to reinstall it. Again as above, I have no problem supporting software
I use, even if the author doesn't:-). Strange little quirk I have.
Mr. Vollbeding may be on another planet as am I, but 1ST Guide plays the MPEGS
on my ST and I consider that no simple feat.

>

Hi all!

Where to find FIND IT and START IT by E.R.S (France) ?

Is there a webpage somewhere or demo versions of the apps?

They was shown at the French dec Paris show.

Hi Martin!

Both you and me knows that there's nothing we can do about the long lines. The Emailer is on the market and people will buy it. You can't scare away people from the discussion forums.

It probaly was wrong by ASH to not use some Internet standards, but they haven't ignored everything. I can read all the messeges in this forum with Emailer with no problems.

And the opposite is that there's noone using the 28.000 Newsareas on the Net that have problems with the long lines that Emailer makes, except users in the Atari areas.

so this crap (all the discussions here) about standards is irrevelant.
Noone of my PC and several Mac users have problems to read my mails, so where do you think the problem is?

o.k I admit that they have a default option set in their e-mail apps that break lines but this feature would be something for NEWSie.

Hi!

This is really a good idea to collect all the available MagiC apps (or links to them) into one place. I still can't patch MAGIC.RAM to not search for a IDE-drive.

Your site will be added with my favorites in CAB for sure.

The old one does not work with MagiC 5.20

There is a lot of stuff in the PS folder, but as far as I know there are no overlay files. I wouldn't know one if it bit me :-)

Can you email the overlay files for 3.53B? Mabye I can nail down what works & what don't work. I'm pretty sure Adobe 3.0 PDF files will never work in GhostScript. 3.0 seems to be a whole new binary beast.

| . . .

I don't want to bore people with this and I certainly don't want to ruin anyone's machine but the reason that the TT has not been keeping time with a 3.6 volt battery might be because the battery is low _or_ it might be because the battery should be 6 volt.

My TT battery gave up in 1994. The battery was marked 6 volt. I asked System Solutions to supply a replacement and they sent me a 3.6 volt one. This did not keep proper time. There then ensued a certain amount of toing and froing by phone and by post but eventually I was told that the matter had been resolved with Atari and the battery should be 6 volt. A 6 volt battery was supplied and worked well until it had to be replaced last year (with another of 6 volts).

> displaying colors in a strange way. I would appreciate it if any CAB
> users could stop by for a visit and let me know your results:
>
> http://www.excelprinters.com/cab_color.htm

The result is no surprise. The reason for the difference is simple.
CAB uses a color table which is also known as "Netscape color table"
(because Netscape Navigator uses the same colors). The color table
uses 6 levels for the intensity of red, green and blue. That means
the table has exactly 6 * 6 * 6 = 216 colors. Using a fixed color
table makes sense, because a browser can't know in advance which
colors are used in a HTML page (there can be many images on the page,
each with its own unique color table). So all colors which are used
in the HTML page (for background, font color, border color) are
matched to these 216 colors (the Atari-VDI currently doesn't support
to set any colors which are not part of the current palette).
When displaying images it is possible to match the colors more
closely because of the dithering. This is the reason of the
difference on this page.

Because of the 6 levels of intensity for the color components, only
the following hex values are used for this palette: $00, $33, $66,
$99, $CC and $FF. That means a color definition of #33CCCC can
be matched exactly but something like #238E8E (the color named "teal")
will be "converted" to the color #339999.

So "web-save" colors are only those colors which can be written
with the hex values mentioned above.

You plug it into the ST serial port (it's a serial mouse after all, isn't
it?), then you need a special driver that runs in the AUTO folder. There is
one on most FTP sites called mouse25.prg

Hi Steve! AFAIK, they must have, because I've got 2 copies and I've played
both through to completion, and I've never had this problem. (hint: do not
find Lord British until you have something from his room, otherwise the
ending to the game is a real bummer!) ;-)

>
> Thank you for taking the time to fill me in on this, Peter...! ;-)

Actually, PCBoard, a product no longer supported, had a decent precense
on the net for a while, and the option to Telnet into the board was not
built it. Under OS/2 Warp a modem driver was used to assign a 'virtual'
serial port to an ethernet connection. This vitual serial port (vmodem)
responded just like a modem, but wasn't. Now, if someone could come up
with a way to redirect a BBS program talking to a serial port while a PPP
connection was established, you would be in business. If you could setup
multiple sessions, you can have 2 lines through one connection. BTW, if
all of the "Vmodem" ports are busy, the clients telnet session gets the
message "BUSY."

There is a program somewhere that allows you to use a serial mouse via
the serial port (imagine that! :) however it ties up the port for
other things like your modem. Perhaps if you have a TT with multiple
serial ports, that's ok, but otherwise it's kind of a pain, I would
think. Someone correct me if I've got this info wrong.

>Or, is there a Atari compatible mouse that I can buy??? (Sweden)

Yes, there are Atari compatible mice out there. If you contact nearly
any Atari dealer they should be able to get you one or tell you where
to get one. I know Systems For Tomorrow has a couple, and Toad used
to, but I'm not sure what kind of stock they have now.

3717. SOFTJEE Products

Newsgroup: comp.sys.atari.st
Date: 1998-02-23 00:00:00 UTC
From: Jaccard Emmanuel <softjee@hol.fr>
Message-ID: <34F1C15D.446E@hol.fr>
Source record: 107004

Hello from SOFTJEE in France.

Some explanation about SOFTJEE products for your information :

EXPAND the last soft is a software which emulate an Expander/sampler Midi on your Falcon. You can load audio sound, make multi-sample instrument and play it with some effects (Reverb,Chorus,Echo...). This soft runs in SAME TIME than a Midi Sequencer like Cubase.

MIDPLAY is a midifiles player without additionnal card. MIDPLAY play the most of GM Midifiles using a audio kit. There're some new features like playing the Midifiles in Midi, handshake for AB40,...

DIGITAL TRACKER 1.9 the last version of DIGITAL TRACKER is the most popular and powerfull tracker on Falcon and very cheaper !

DIGITAL HOME STUDIO the bigger software from SOFTJEE allow you to use 5 software in one : Synthetiser,Midi Sequencer,Sampler,Digital Effects and Direct To Disk.

LIVE MACHINE a 8 track D2D to help you in scene (live).

You can ask me more informations or see our Web site,

Thanks a lot,

JACCARD E.

>Yes, I saw STunt Car racer and it was excellent. Did he do any other ST
>3D stuff.

Formula One Grand Prix released by Microprose was, and still is, one of
the best games ever on the ST.
His other games were:
A flight sim for the BBC model B
Revs - an F3 racing sim, for the BBC and Commodore 64
Sentinel - a strange 3D game soon to be release in revamped form on
the PC and PlayStation (I think) though not programmed by
Geoff.
Stunt Car Racer - ST, Amiga and later for the C64, Spectrum and PC
(I think) though Geoff did not program the last 3.
F1GP - ST, Amiga and PC
F1GP2 - PC

> By the way I should show you some of the work we did with the

>the Same guy. 3D fanatic, animation ect?

What stuff?
There are a few of my CAD3D2 models floating around.

>Well that is interesting. I found an A 500 useless, for animation, and I
[Snipped]

I certainly wouldn't say the A500 was useless. It was as capable as
the 520ST at just about everything. When games makers started to use
the custom hardware of the Amiga rather than doing simple ports from
the ST there was little chance of the ST keeping up.
F1GP, mentioned above, was, apart from a few extra colours used in
some static pictures, identical on the ST and Amiga. The 520ST had
a fractional FPS advantage over the A500.

>Thanks for your input. I will talk later.

It's quite alright.

Rich.

If people keep posting wrong messages here, they won't change their situation.

If you would read the accompanying documentation to the JPEG saving module
(yes, I *did* care to provide this in *english*!), you could easily proof
your statement wrong.
But again, I'm likely expecting too much from you, sorry.

>temporaily make a cable to connect my st to a composite monitor.

I have made cables for ST -> RGB and ST -> composite. Pin-outs are available in your ST manual. The only tough part is making up your own DIN connector. I'm told you can get those from Best Electronics, but I had some 0.1" header pins and some perf board and a pc board drill, so I "rolled my own." Probably the advice to look for a ready-made solution is the best, plus it will come in handy when you find you need a mono monitor for your MIDI programs!

Hi,

I'm trying to put together a comprehensive help area for Atari users. This isn't meant to compete with any established sites, just to provide another resource. I've been combing sites looking for interesting help files, and then emailing the site owners to ask permission to link to the files, but it's taking a while. Therefore, I'd also like to get some input this way....
Do you have a/some useful file/s on your site? Would you like to ensure that there is even greater access to them? If so, I've put a form up where you can provide me with all relevant information. You can link to it directly at:

http://www.geocities.com/SiliconValley/Peaks/6320/ahd01.htm

if you don't feel like trying to locate it on my site.

Any information (as long as it's legal) is welcome. FAQs, hardware/software help, histories, anything.

Thanks!

Terry Ross

Roy,

Cubase will have a hard time running in 1 MB of RAM. Steinberg made an older sequencer called Pro24. Very powerful, it would work in that environment.

It did not like clocks or hard disks.

Another choice would be MasterTraks Pro. It was not as hip as Cubase or Pro24 but it was a tool I used almost every day in the recording studio for 6 years.

As far as current software look at shareware and demos.

>
> What is a 12MHz 520ST+? How do you get 960*544 Mono?

Needs a bit of handyworks ;-)

Exchange the CPU by a 16 MHz version, improve system bus termination,
exchange LS type bus drivers for ALS or F types, then feed the video
shifter with 48 MHz instead of original 32 MHz. Now your machine works
with 12 MHz. Make sure ACIAs, floppy controller and sound chip see
original clock.

Now make a little sequencer that creates original video timing. You
can program the sequencer such that more time between syncs is used for
visible information on the screen, then decrease vertical sync clock
slightly (around 65 Hz) and you've got 960x544. A tiny AUTO program tells
VDI (or NVDI) about the new resolution, and everything works just perfect.

Component cost is around $30, and it's been the most rewarding hardware
hack on my machines so far.

Older SM 124 can display this resolution directly, Monitors newer than
1988 will need a little patch to cope with the 48 MHz pixel clock.

Cheers Peter

> have to boot STiK to upload.

I think this is fixed now. The bug caused uploads to not close the newly created file, but instead append another, random byte. The effect depends on the server OS. Unix systems will always get the data, if a file is not closed on a Unix system, all written bytes are still accessable. Due to the nature of the bug, they happen to be one byte too long. On NT servers, the file will be zero bytes long, as is every file that is written and not closed under Microsoft OS. I should add that Ataris do the same ! Open a file for writing, write something, and forget to close it, the file will be zero bytes long.

The bugfix will be available on my web page in a couple of days.

Cheers Peter

I definitely think I have fixed this bug today. I certainly fixed it for the
few occasions I've seen it. The bugfix TCP.STX is in beta-test now, and will
be available in MODULE.LZH from my web page in a couple of days if no new
problems crop up.

So you can go back to STinG ... ;-)

The Dialer tells you the connection rate, if you've set up the modem
properly.

Possibly you've enabled Van Jacobson Header Compression. Don't do that
unless you're using the latest SERIAL.STX from my web page. Try to switch
off VJHC.

Hi Frank,

I'm not sure about the key for Selectric, but I used it for long time.
Dunno about the NEW versions of Boxkite, but I hated the "Russian Keyboard
Shortcuts" for it... :-)

And maybe Peter calls Freedom a "Schweineprogramm", so what about UIS-III?
So far I got no problems at all with Freedom. I'm not gonna say it's NOT a
Schweineprogramm, on the other hand I don't have problems with it. And believe
me, my set up is hyper sensitive to troublemakers... :-)

You're the second Falcon user to state that the colors look the same. If I view the page in 256-color mode, many of them are different (even in 24-bit mode). As I posted earlier, two other CAB users with graphics cards stated that the colors are different.

Is that a typo or are you really using NVDI 1.12? I'll assume you mean 4.12? It sounds like the color differences could be VDI-related, as I run Nova's own VDI (NVDI's screen drivers have to be disabled).

That's a nasty episode. Is there any chance your ISP has workspace limits for e-mail?

I have EMAIL=, SMTP_SERVER=, POPSERVER=, and NNTP_HOST= defined in STinG's default.cfg. These parameters are carry-overs from STiK's default.cfg, and I do remember having server troubles if they weren't defined. It sounds like you have a POP3 mail account (must be if you've defined one in NEWSie). POP3 also handles the deletion of mails, of which you had trouble with, so I'm quite certain you need to update your default.cfg. Either that or stop sharing those huge MPEGs <g>.

Based on the limited feedback I've received, why would Falcon users see the page's colors the same (i.e. correctly), while others with video cards see them differently? The page should look the same whether on a 256-color Falcon or a 256-color TT. Everything seems to point to what VDI is resident. No?

>
>James
>

Forget it, these are scams.

Just think about the theory of pyramid sales:

1 person ask 4 people to participate
These 4 people each have to find 16 new people
next step : 4x4x4=64
4x4x4x4=256
4x4x4x4x4=1024 people on the 5th step

These things are based on peoples ignorance. Even in the first phases, it'll be pretty hard to find 1000 people willing to send you $10. If you keep on this way, the pyramid easily gets exhausted, and the people at the bottom (=you) lose their money. This is why it's illegal.

If there really was a way to get rich quick, there wouldn't be so much misery on earth. Their is no way to get money to appear out of the air. Their is always someone you gets conned in the end. These are the people who get desperate and send spam mails.

Cheers,

Nick.

As I told you before, this is not true. I use Agent on my work for
reading newsgroups, because I do not like Newsie for this. And Agent
does not cope with long lines to. So it is not only Atari. At least
one MS-Windows program expects standards to be hold too.

Hi Bill,

Here's the latest info I have on Hybrid Arts (now Binary Sounds):

Binary Sounds
431 Oak Dale Drive
Stafford, TX 77477
(713)499-3129

I ordered the latest upgrade (7.10) to EDITTRACK Platinum and the latest upgrade (2.01) for Genedit so I could use them on my Falcon. The guy's name is Robert Semaan. It took him about 9 months (after several phone calls and a letter), but he DID send me the programs along with a lengthy apology. He was not presently developing any of the Hybrid Arts stuff, but hoped to get back to it sometime. That was June 1997. As far as I know, Audiotrack has not been finished. Can't hurt to give a call. Good luck!

I have Logic Audio now, but SMPTE-track (or EDIT-track) is SOOOOO much easier to use. Maybe because that's the one I learned on. ;-)

Source record: 107078

Hi Peter,

I started this thread some time ago. This is what I learned:
You need to set your NVRAM to boot the Falcon in 640x480x16 to run
Stoop. But you knew that already didn't you?
Stoop should be placed before magxboot.prg in the auto folder.
You can then create all your Magic and non-Magic setups in Stoop and
pick them on first bootup.
When Magic reboots it always starts in ST-HiRez, which doesn't work with
Stoop, but as you've already picked your Auto programs with Stoop you
don't need to run it again. If you do, Stoop should exit on its own with
a message. To stop Stoop running at all create a file called
autoexec.bat in your auto folder. Magic will only execute the programs
named in this file and only in the order specified (list the programs
one per line). Of course you will need to create different autoexec.bat
files for different Magic setups, but you can use Stoop's ability to
copy files to a different name to get the correct autoexec.bat to run.

Hope this helps,

Michael

> Seconded! Frank, could you please say if v5.26 now supports .wmf import /
> export as the W95 version, also word counter?

Iï¿½m sorry but word counter is still a missing feature. Perhaps it will
appear in V.5.0 but I am not sure about it.
Which W95 version of Papyrus do you use? I ask because the current
Papyrus ATARI Version is 5.5x (But you certainly have to pay for an
upgrade from 5.26).

AFAIK the current versions for OS/2, Win95 and ATARI are the same
(except IBM Voicetype support).

Tschuess,
Frank

> What's this?? I just purchased Papyrus (which I'm very happy with BTW) but
> it's only version 5.15!

And that is correct because this is the latest english version.

> How can I upgrade to the latest version (System Solutions when I asked them said they knew nothing of > any newer version.)

I know that this is not a perfect solution but you can get the german
version 5.26 directly from R.O.M. BBS without any extra fee (except the
huge telephone bill ;-)).

So you can use the german V. 5.26 to import .doc-files and then switch
back to the english V. 5.15 after you saved the document in .pap format.

> And now it seems like version 6 is just around the corner! Will there be
> an English version?

The german version of Papyrus 6.0 is announced for the ATARI fair in
Neuss at the beginning of april this year.

If this will happen however is not certain because all of you know what
can happen during development of a complex software product.

And the translation will take time anyway.

Tschuess,
Frank

It is planned for version 6 that it will handle .html files. But no current version of Papyrus is able to do that.

Nice to read.
Although the author of selectric is a german it is impossible to get a
key here in germany.

So perhaps everyone who paid in advance directly to the author should
try to get in contact with Denesh?

Hmm maybe I should tell my falcon that because I definately *do not* have
it set to boot in 640x480x16 and Stoop runs just fine setting the correct
resolution itself.

It does? I didn't know that. I guess the main problem is MROS which
messes
around with GEMDOS, but it's interresting that it almost works with
N.AES.
With MagiC you wont get that far.

> One day it will;-|

Maybe but I doubt it. We realy need a new sequenser.

Well I would ignore that error but it is preventing the StonX startup. The
StonX window appears but that erros makes it hang, it stops after that.

I have X11R6 libs installed
the TOS version is 1.04 I believe...would this somehow give me an error?
Or moreover, cause this hang up? All is fine before, it reports a few
errors regarding keys it can't map etc but that appears to be ok.

What is the most recent version of the NOVA graphics card driver and where may I find it?

I am currently using version 2.6.

The reason I ask is that CAB often quickly eats up large amounts of memory (12mb) until it eventually runs out and bombs. I was told that this could be due to the NOVA driver I was using - that there was a version of the driver that had a memory leak.

Matt Faehnle

Newsgroup: comp.sys.atari.st
Date: 1998-02-24 00:00:00 UTC
From: Jim Trageser <trageser@geocities.com>
Message-ID: <34F36E55.30DF@geocities.com>
Source record: 106898

Howdy all,

I recently picked up my first Falcon, an original Atari 030, and find my old copy of Universal Item Selector 3.0 won't run on it. I notice that A&D had a later version, 3.1 I think, that apparently did run on the Falcon.

Are they still in business? Is there, indeed, a version of UIS that works on the Falcon OS? And, finally, does anyone know where I can get a copy? The calluis.acc works fine, but if I try to use the UIS 3.0 .prg file in the AUTO diretory, the system freezes up on me (so I use the calluis.acc with the built-in file manager, but it's not nearly as sweet).

Danke!

(Oh, I don't get on here too often, so if you can respond privately, or at least cc me on a public response (to share the info with everyone), that would be pretty darn helpful.)

Try a null modem cable. This would allow you to go to the full speed of the ST 19.2K Somewhere on the net there is a file tranfer program. But can't remember the name off the top of my head. If you had a zip disk that too would work. Hey good luck on your quest.

P> I'm using XBoot happily on my ST but the Falcon I've just got has
P> Stoop installed. This seems to have the advantage of allowing easy
P> setting of the start-up screen resolution, but only works in 256 colour
P> (and up?).

That's incorrect. Stoop works fine with lesser colors, but it requires a screen at least 640x480. On a Falcon with RGB, that means setting your NVRAM at 768x480.

P> I'm hoping to add MagiC soon. Does Stoop work with that?

Stoop works great on my MagiC Falcon. It actually only runs after a cold boot (i.e. before MagiC is installed), but I like it that way. Warm boots bypass it, which is fine by me.

What is your Falcon set to? The docs very clearly state that you need a screen size of at least 640x480, and my experience confirms that.

> multiple sessions, you can have 2 lines through one connection. BTW, if
> all of the "Vmodem" ports are busy, the clients telnet session gets the
> message "BUSY."

Actually that should be possible indeed, and not even too difficult to
achieve. It would be a TSR program that provides virtual modem ports for
the BBS via RSVF, and awaits Telnet connections via STinG. Thus it had to
be run in the AUTO folder *after* STinG and *before* the BBS.

Then it only depends on how well the BBS was written. If the author followed
the SERSOFTST standard, the BBS could have a dozen ports or more !

An interesting piece of work actually, but I got to much going on ATM, so
don't rely on me for doing it.

Cheers Peter

Message-ID: <34F37CC6.7F36@m3.sprynet.com>
Source record: 106910

My Mega STE doesn't seem to want to read 720K disks. They check fine in my PC, but the STE will either stop reading the disk immediately, or will stop after about 1/8 of a format with an error.

1.44M disks work fine. I'm not running any patches and I have TOS 2.06.

I _think_ I had similar problem with STinG until I set 'delay' value on 'STinG Internals' CPX to be reasonably(?) high. I had tried to get STinG to work for months (at least for ten months) but I always failed, even with the new bugfixes. Now I have been using STinG for some months instead of STiK for some months. That problem disappeared completely after that setting.

I had also tried to set the value before, but only between values like 10 to 40. What did this cause? At least timeouts in connections all the time. If something got transferred, the rate was about one kilobyte per minute or even less.

My setup is Falcon030, MiNT and multitasking AES. The same thing happened with STFM as well. Serial port speed between 19200 and 57600.

Thank you. :)

Since reviving the old ST and reformating the HD which was inactive for years I am now missing ARC.TTP or any similar LZH Extracting programs to extract everything I archived when it was taken out of service in the early 90's. Any help is greatly appreciated. Once I have the ability to extract all the old ST stuff I will gladly fill any requests in return. I unpacked ARCSHELL by writing to a 720k IBM floppy and using LHARC to extract it but there are no TTP files which I remember it used to call on to extract with like LZH.TTP or whatnot yes?

Hi all,

As I mentioned some time ago, I have been doing some experiments porting

the uClinux patches to other target platforms, and now I have managed to

compile a Linux kernel which boots on an old Atari ST machine with 4Mb
RAM (actually, I only tried it with an emulator so far, but I'm pretty
confident that if the emulator can handle it, the original machine can
do it too).
Check it out if you're interested:

Get the starter.tos package from the umich archive. It contains all the basic dearchivers (LHARC is the one for LZH files). They can also be obtained individually from the archiver directory.

You should also get Two in One, which is an excellent multi-archiver shell that used to be shareware, but to which the registration key is free.

Cheers,

Nick.

3796. Hardware MIDI-timing problem!

Newsgroup: comp.sys.atari.st
Date: 1998-02-24 00:00:00 UTC
From: Krister Sundstr&#65533;m <support@axxess.se>
Message-ID: <34f293d7.0@d2o1.telia.com>
Source record: 106948

I have a strange problem with my Atari 520 STm, upgraded to 1MB RAM. I use a MIDI-program called Concerto v1.4 and a Yamaha CBX-T3 GM-module. The module works OK on a standard PC-computer. I have tried the Pacifist ST-emulator and Concerto on a Pentium-PC, and it seems to work, too. So, the problem should be in the Atari ST.

When I play MIDI-tunes with lots of sounds (2 or more), the timing become somewhat wrong. I can hear that the music is a bit untight.
Facts about the motherboard:
Part No: CO70243 REV.I
ACIA: MC6850P
MFP: MC68901P
ROM1: C101632-002
ROM2: C101631-002 (TOS 1.02, UK)
MMU: CO25912-38

Missing parts: C107, C108, C110, C121, C127, C130, C210

Thank you, Krister!

>zero bytes long.

I have been finding a similar effect. Under MagiC, trying to transfer large files (60Kbyte and 300Kbyte) to an IBM-formatted disk in the A drive results in a zero-length file which the Falcon cannot delete (reports write protected, but it isn't). This is the same whether specifying the A drive as the destination for an unZipped file, or straight copying from the HDD. It works OK under TOS.

On file sizes: is there any known restriction on the size of .WAV file that GEMJING will play? It doesn't play 140KByte files for me (Falcon + Afterburner+MagiC).

Hi everyone,
I am using Multitos with Mint 1.14.6. I am also using sting to connect to my ISP.

When I use sting under single Tos everything is ok. When I try to use it under Multitos there is a problem. It connects ok but when I try to download my messages or a page or connect to an Irc server (Cab, Newsie etc.) everything stops working and I get a message like this: pid <number> (AESYS) bla bla bla bla bla....

What's happening? I have placed in my auto folder Mint, Drvin, Scc, Sting. I have tried several combinations. When I put Sting before Drvin and Scc it doesn't work (Mint,Sting,Drvin,Scc). When I put Mint after Sting then Multitos doesn't run (Drvin,Scc,Sting,Mint).

Thanks,
Pantelis

I can tall for sure it is possible do connect an atari w/o RF-output to any tv w/ SCART input: you only need an atari monitor plug and a scart plug (and some wire). it works fine with every german (PAL) TV-set but it should do as well with NTSC-sets (as this is not RF). If you find the wiring description. go ahead I found: (try Deja-News (i won't) if you don't find anything,mail me and i'll find out about it this weekend)

Try this:

```
DRVIN
SCC
MINT
STING
```

I know the HS-Modem docs says it must run after MiNT, but in that case
it doesn't work at all on my Falcon.

I would say that ASH or Andreas better drop System Solutions as they are
not doing a very good job (and I'm being kind when I say that).

MagiC is up to 5.2 and you should look out for version 6.0, not 5.20.
Note that the situation is not any better in sweden, so I will buy my
next
update directly from ASH in the future.

Well what can I say? Just test them all and I promiss that you wont get
disappointed. These are some of the best programs I have ever seen for
the
Falcon and they even works on my AB040. They are all great programs and
if
we support Emmanuel I can promiss that you wont get disappointed in the
future either. :-)

Hi there! What version of the MultiTos AES are you using? I've managed to get the combo you are talking about working with AES 4.0, but when I swap it out for AES 4.1, I can't get it to work either. Shame too, considering how much faster AES 4.1 is, and the extra features like the ability to iconify windows... If anybody else has got this combo working, please let us know how! ;-)

3809. HP Deskjet 820CSE

Newsgroup: comp.sys.atari.st
Date: 1998-02-24 00:00:00 UTC
From: Eric Cron <ericcron@wwa.com>
Message-ID: <34F2F9C9.3D8DD1EA@wwa.com>
Source record: 106961

How can I get this printer to work with my 1 meg 520? I have Timworks publisher and I tried to use the driver for the HP Deskjet, but it didn't work. I know it must be the drivers because I had no problems using a dot matrix printer.

I'm really not concerned about color printing at this point, but it would be nice. A solution that would also allow me to print from Wordperfect 4.1 would be great too!

I'm not using anything fancy. I guess it's tos 1.0....Timeworks also installed GDOS 1 I think. Please forgive me if I didn't give all of the information needed to help me, I'm an ST newbie.

Thanks for any help!

Eric

Got an ICD host and 60 meg scsi drive. Partitioned as two 30 megs C:
and D: but only C: shows up on the desktop after it boots 4.6.0 bla
bla. HDUTIL shows one GEM and one BGM partition. The ICDFormat now
blows up with cherry bombs on the screen so I've tried writting zero
HD to D and so forth with HDUTIL and so far no luck. Do I need some
newer HD Utilities besides the ICD 4.6 which came with the Adapter?

Thanks in advance for your suggestions.
C: works great but I sure want the other 30 meg!

:
I'm not sure what Semper is, can you fill me in? I had experience in ST BBS's for a while, ran a BBS for 5 years on an ST before I moved to the PC. Started with FoReM ST, then went to Turbo Board, then to Ratsoft, then moved it to a PC because of hard drive problems and modem port problems. I also own a very old copy of BBS Express ST from ICD (Only problem with it back then was the fact you could only use 1 drive for a file directory, back in the day there were size limits).

ANyway, enough of the past....

What is Semper, and where might I look around for it? If I were able to setup a telnet BBS, I would do it in no time. I already have 2 Mega STEs with ethernet cards. (And I am in the US also!).

Of course, a real evil way of trying to do telnet on a BBS is set one up under PaCifiST using the serial port in OS/2 Warp, and routing the requests to the virtual com port..... very evil, and probably unstable.

Maybe I will give this a try (If I could only get an SMP capable OS/2 on my computer!).

Maybe we could stir some interest in this, I would be willing to test it over a connection throught ethernet on a Mega STE with Ratsoft 2.1i. (Last version of Ratsoft I had, is there newer?).

Bonjour,

Dans l'article <34F2F9C9.3D8DD1EA@wwa.com>,
Eric Cron , <ericcron@wwa.com> a ecrit :
>>How can I get this printer to work with my 1 meg 520? I have Timworks
>>publisher and I tried to use the driver for the HP Deskjet, but it
>>didn't work.

Be careful with HP-820 : some of them are >>Windows-optimized>> and
can't be used at all on ST, because all the preprocess is made by Window's
driver and not by the printer (which doesn't seem to understand PCL, unlike
other HPs, but directly Window's graphic format or something like that...).
I don't know if it's the case with the cse... If it was >>cheap>>
(compared to a 870), it is certainly the case : good luck to get the cash
back.

>>I'm not using anything fancy. I guess it's tos 1.0....Timeworks also
>>installed GDOS 1 I think. Please forgive me if I didn't give all of the
>>information needed to help me, I'm an ST newbie.

I'm afraid it's the printer fault more than TOS or GDOS
one... Normally, HP deskjets are compatible with HP-500 - except the 820
designed for Windows :-(

Try this: drvin.prg, scc.prg, mint.prg, sting.prg.
STing *must* be loaded after MiNT in order to work.

He,

I have it working on my Hades using N.AES/freemint 1.14.6.
N.AES uses AES 4.1.
Is it possible that *multitos* can get along with AES 4.1?

>2.0.3. Anyone have any suggestions?

Hi!
Your system description is a bit short!
Linux 2.0.3. ? - whiat libs (/lib - /usr/X11R6/lib) are installed ?
Well, i am using STonX out of the S.u.S.e.-distribution alike as compiled by myself
from the original site with a dump of my own TOS 2.06 (out of a former 1040 STE).
When starting up there is a bunch of error reports - just ignore them! STonX is
running with any program i tested to run on every of my MegaST2, 1040STE, Mega STE.
Including TWord 2.91, LDWPower, TurboC, Mahjongg's, Guck, Calc,
ZIP/ARC/LZH/ZOO-tools, old elite could be started from disc !...
S.u.S.e now is at 5.1.(003 ftp) with linux.2.0.33, libc5, libXpm4.10 ...
Btw.: are the output looks like ->
Starting emulation...
Bus error at e0019e, sp=8000, sr=2710 addr=41fffe rw=0
?
Those i ignore :).

It is possible to use a VME card adaptor with two VME slots ... or even more ... the guy who is developping the Startrack (german VME sound digitising card) was talking about that to me at the last german atari show ... it works a little like hard disks ... you can assign different commands to each card so they won't have any interference... something like that ...

So it must be possible to make live together two VME cards !
But of course practically you'll have to find such an adaptor and install both cards ... you'll certainly should put your TT in a tower case to make this possible ...

atari@hem1.passagen.se wrote:
:
: so where do you think the problem is?

The problem is for all of us that don't want to spalsh out $100 for Magic, plus $50 for CAB to get I-Connect, plus $50 for the E-mailer, that's $200 now, just so we can read these crummy posts. Whether we use Newsie or any other newsreader that _conforms_to_spec_ we suffer. I use tin on a Unix box and it breaks the lines where it has to, which means in the middle of words and all over the place. And when I reply to your email I have to carefully re-format all the text from your article that I quoted.

You imply there is no solution because the product is already on the market. There is a _simple_ solution. ASH needs to write a patch to fix this bug (for that is what it is, a BUG, and just because the people who suffer for it are the majority of the newsgroup, rather than the minority suing this BUGGY product doesn't change that), and give the patch away to all their users.

if you go to the main STiNG .CPX, you'll see a slider dial. Push
this down to 10, and you'll notice a dramatic speedup in operations
(don't forget to save the configuration for this).

>
> I used HSMODEM7 (DRVIN + SCC, default parameters), and dialed in PPP,
>with compression.
>

if you take a look at your DEFAULT.CFG file in a text editor,
you'll see a series of lines dedicated to proxy servers for CAB right
at the end of the document. Either replace these with your ISP's proxy
servers, or comment them out with hash marks - you'll notice you'll be
able to connect. Be sure also to use the latest CAB.OVL (1.28???? if I
remember correctly) for the best results.

> have to boot STiK to upload.

I have a similar problem with FTP and STinG, except that all the files gain a byte. This doesn't just happen when I use PPP, I also get the same results with SLIP as well.

I've tried both aFTP and NEWSie and, although in cases where the file is small, upto 900 bytes, the transfer usually works as it should. Between about 900 and 2000 bytes the transfers randomly fail. Sometimes the same file can be transfered correctly after a failure, or will fail if uploaded a second time.

Above 2000 bytes, it's virtually guarenteed to fail. This causes problems with aFTP as it locks up at the end of a transfer, thereby requiring it killing in the task manager. Newsie will at least allow me to escape and disconnect, although I'm not to sure if it disconnects properly.

If you're having a problem with NEWSie and email, try POPwatch. It will
display all the mail, with filesize, waiting on the server so you can mark
individual mails. Then you either download, reject or delete any mail.
Any mail downloaded is put into the correct place and format for NEWSie.

If you want it, if is available from Gary Priests homepage:

<URL: http://www.the-gap.demon.co.uk>

The latest version is (I think) v2.42. Just follow the links, you can't miss
it.

If you want more than one enemy at a time, try pausing while in hyperspace
and looking at a map of the destination system. I've had some pretty fierce
battles with about 10 ships, of varying types, almost as soon as I arrived.
This was discovered by accident, of course, but I routinely do it when I
want to have a more even battle. I've a Panther with a 100Mw laser in front
and a 20Mw on the turrets, and a lot of shields since the Couriers are a
damn good shot far too often.

>Colours are different for me with Falcon, no card, 1024x768x256.

Are you running NVDI? Joergen is running NVDI 4.12 on his Falcon and
says the colors _aren't_ different.

Note that the colors are correct if I view them in Netscape on a PC in 16-
bit color mode. Yet with CAB 2.5 running in the same color mode -- and
coincidently under the same Mach 64 graphics card -- the colors aren't
correct. Ironically, if I run the older CAB 1.5 in the same mode, the
colors match better than with 2.5. If I'm not dealing with 'Netscape
safe' colors as Alex mentioned, then why does Netscape take a 'liking' to
the test page and CAB doesn't? I can only point to the VDI.

More feedback from other CAB users would be appreciated:

http://www.excelprinters.com/cab_color.htm

If one isn't actually connected with CAB, I've added a link to download
the pages for viewing offline. I've also added a screengrab from Netscape.

3848. Re: TOS version 1.02, ROM

Newsgroup: comp.sys.atari.st
Date: 1998-02-25 00:00:00 UTC
From: dietmar.belloff@chiru.med.uni-giessen.de
Message-ID: <6d29j0$1b9o@c4.hrz.uni-giessen.de>
Source record: 106739

Hi!

>Yes, that's strange.
No, thats not strange. Only the older Megas came with 6 EPROMS or ROMs,
the later had 2 Megabit-ROMs for TOS 1.02 which is better known as blitter TOS.
So your Mega should come with location U12 (74LS11) empty. If U12 is present and one of its pins is cut (mainly pin 12) the board was modified to fit 6 EPROMs.

The problem with these 2 ROM chips: You can't easily replace them with EPROMs for upgrading to
TOS 1.04 - you have to build an adaptor.
So your Mega is better in upgrading to TOS 1.04 - simply replace old ROMs with new EPROMs...

> Also, wasn't TOS 1.02 the version installed in Mega ST
>computers only (blitter tos) ?
That's right.

>I also thought that all the "non-F" machines
>had only TOS 1.0.
Not automatically. My first 1040STFM I bought in 1989 was fitted with TOS 1.04!

CU
Dietmar

My 1040 STFM (bought new in 1988) had TOS 1.02 ROM (never opened it, so
dunno if it was a 2 or 6 chip set)

I traded it in for a new Mega 4 in 1990, which also had TOS 1.02. (I
should have waited about six months or so, the I could have got it with
1.04 ROMs)

What's wrong with a midi connection, like the one used in Substation? I'm sure that would work equally as well, and wouldn't it be cheap to do as well, midi cables are only a couple of quid anyways for a set.

Kev.

3852. Multitos+Sting

Newsgroup: comp.sys.atari.st
Date: 1998-02-25 00:00:00 UTC
From: goodman@matrix.kapatel.gr
Message-ID: <6d29ll$d3n@lithos.kapatel.gr>
Source record: 106743

Hi everyone,
I am using Multitos with Mint 1.14.6. I am also using sting to connect to my ISP.

When I use sting under single Tos everything is ok. When I try to use it under Multitos there is a problem. It connects ok but when I try to download my messages or a page or connect to an Irc server (Cab, Newsie etc.) everything stops working and I get a message like this: pid <number> (AESYS) bla bla bla bla bla....

What's happening? I have placed in my auto folder Mint, Drvin, Scc, Sting. I have tried several combinations. When I put Sting before Drvin and Scc it doesn't work (Mint,Sting,Drvin,Scc). When I put Mint after Sting then Multitos doesn't run (Drvin,Scc,Sting,Mint).

Thanks,
Pantelis

I think there is something great to be said about how diligently Peter
follows users' problems and works on bug fixes. As big as the net is
with seemingly infinite numbers of variables with different ISP's and
user configurations, it is a great task. Such dedication is truly great.

They are most likely upgraded from the original chips. TOS 1.2 often
said Mega TOS on the chips. They could also be Rainbow TOS (1.4). Check
the date under the Desktop Info box. 1985 is 1.0, 1.2 should be about
1987. Rainbow TOS will give a color display on the Fuji symbol. More
reliable to download one of the system snooping utilities.

Hi
well, I want to install LINUX on my Nemesized
Falcon.
How do i go abouts doing this? My friend just
bought redhat linux for his PC on a CD with a
installation program and everything (by every
thing I mean Netscape , x11)
Is there such a CD for TOS?
BTW, I wrote this using ASH emailer.
Can you Newsie Guys View this Ok?
I hope so...

Both is done now. A new TelStar version is available on my web page. I've
posted the parallel resolve code to the developers and beta testers mailing
lists, so all client authors should have a copy. Hopefully Dan considers it
worth to put it into CAB.OVL, I'd love to see it done as with TelStar it
works very well.

That would be "insane" :)) Since I for one is not using the normal desktop
anymore, I use Thing, and thing saves it's info in a total different file..

Also beeing abel to select the application myself, is quite good sometimes
for example, all those .txt files I would still like to be able to use CAB
to view, insted of Everest (which I use in the desktop).

Nope, keep it the way it is, let US define what to do with the files...

> copy files to a different name to get the correct autoexec.bat to run.

Hmmm, all I can think of when hearing this is that you got an old version of
Stoop, since here Stoop switches to 640*400*16 by itself, no matter what
starting resolution I have (320*200*4 can bu used as an example, or ST-High
which you mention here)
Also Stoop recognises If it has been started from Magic or NOT and
terminates itself directly without any error or anything, so why bother
mking that autoexec.bat file? :)
BUT if you doo want to use that autoexec.bat file, you do not even have to
you can even create it in Stoop.

Then what Stoop am I talking about? V1.05b ofcourse, from my knowledge the
last version released before the authors Falcon broke...

New at Systems For Tomorrow February, 25th 1998
~~~~~~~~~~~~~~~~~~~~~~~~~~~

Suzy B's Treasury Vol 2 CD $29.99
This CD from Suzy B Software continues the tradition of bringing you "a honey of a deal." It includes the best in Atari PD and Shareware, all clearly described by "The Unabashed Atariophile" of Z*Net, AEO and ST Report fame. It's been three years since the first collection and thousands of new files have arrived. Most files are compressed in ZIP format in order to fit more data onto the CD. We also have received more copies of the origional Suzy B's two CD set, now also priced at $29.99. From Suzy B's Software.

Link 97 for ST/STe/TT $89.99
Easly connect harddisks, CD ROM drives, streamers etc. to your DMA port. Technical features: SCSI 2 Commands (Harddisks above 1 GB can be used), Parity, SCSI Initator Identification (Harddisks like the Quantum Fireball series can be used), You can connect up to 7 SCSI devices. Note: Does not include driver software. From WB Systemtechnik.

DTP+G Desktop Publishing CD $39.99
A desktop publisher's dream! This CD contains over 3,600 fonts in Calamus, True Type, Postscript, GDOS, Signum, and other formats. It has over 8,000 pieces of clip art as well as DTP support programs, printer drivers, word processors, font editors, CAD software, printer utilities, and more. Over 90% of this CD is in English! It also includes four commercial packages: Family Roots I, DegasArt, Edith Pro, and X-Lator. From Floppyshop.

Atari Computing #7 $9.99
Reviews: CAB PPP-Connect, Geneva, ImageCopy, CENTurbo I, Magnum ST, Texel, Tetris II and More. Neuss 97 Show Report. C Compilers: Prospero vs Lattice. From the Atari Computing Group.

Scan X: UMAX for TOS Computers $49.99
This new edition of the Scan X scanner drivers provides support for the UMAX Astra 1200s and VISTA S-12 scanners. A MicroTek E3/E6/35T+ version is also available. From Homa Systems.

RAM Gizmo /w 14MB for Falcon030 **SALE** $99.99
Wow! RAM prices sure have droped over the last couple years.. This is by far our best price ever. Under $100 (well a little) for a populated RAM Gizmo with 14MB RAM! Limited quantity available. From chroMAGIC.
~~~~~~~~~~~~~~~~~~~~~~~~~~~

HD Driver 7 for TOS Computers $49.99
Latest version of the best Hard Drive software you can get.
Upgrades from v5 or v6 are available for $25. The return of your
manual and disk are required for the upgrade, Email for details.
From System Solutions.

Electronic Cow!
Three cool music applications! For more information check out
the Electronic Cow link on our web site!

MIDI Arpeggiator for TOS Computers $27.99
Sound Chip Synth for TOS Computers $19.99
Snippit Synth for TOS Computers $29.99

Also Available:
CAB 2.5 $49.99 HTML browser /w PPP socket for MagiC!
Atari Works $79.99 Easy to use home/office suite.
Lattice C 5.6 $139.99 C Compiler.
True Image $29.99 Image Processing Package.
Alien Thing (Expert) $19.99 Alien Blasting fun!
Tetris II $11.99 Cool Tetris game
Power Up $19.99 Racing fun for ST/STe/TT/Falcon
Desktop Solitaire $19.99 8 solitaire card games for TT/Falcon
Face Value $69.99 Visual style GFA programming
All Things Falcon CD $9.99 Tons of Falcon PD/Shareware on CD
Hard Disk Sentry $39.99 Optimize that Hard Drive
Photo Show Falcon $9.99 View Photo CD discs on the Falcon
Card File 4 $29.99 Personal Information Manager
Moving Pixels CD $29.99 Software Collection /w sources on CD
ESG Clipart CD $19.99 IMG, CVG and GEM/s clipart on CD
True Paint $19.99 GEM based paint package
Plus about 400 additional products for your TOS Computer!

I noticed that they are now selling out their Falcon cards. Nice
price. Regarding the latest driver vesions Nima is not up to date.
He is saying that the latest driver is 2.62, how come that I
use 2.66 then? :-)

To get the latest driver go to my page (see below). It might only
work on a AB040, but I don't think so. It has got some bugfixes.

There is a way, but it's a DIY project published (in german) in a german
electronics magazine a few years ago. The thing required PALs or GALs that
were supplied by the magazine. Not for the faint hearted.

Cheers,

Nick.

That's right in order to be able to run Stoop from the desktop (this don't
work with Magic though). But my rez in NVRAM is set to ST high for a good
speed at bootup.

Bye,
/Pascal/

> jm> stuff, printing reports, financials etc

I used to run a business using Atari's and had a program called
System3 which had three modules: Cashflow Controller/Invoicing&Sales
Ledger/Stock Control, which sounds just what you need.

It was marketed by Digita International, UK (tel: 0395 270273), but I
very much doubt they are still in the Atari business.

Address: Black Horse House, Exmouth EX8 1JL England.

Good luck

Mark

It would be nice if that very annoying bug in my version had now been removed.
It is a bug in the VT52 emulator, and I had to write a patch...

BTW, I don't know if there is only one version of the driver, or if it has
variations according to card/computer.

Cheers.

Well I've got a few questions....

I just found the "Collapse Threads" option - which was inadvertantly switched on. I could never figure out why there messages missing...

Why would anyone want to use this "Collapse Threads"?

I've also had some problems with Newsie and WINX. WINX is a window gadget enhancer, but it requires that GEM be loaded into RAM and then modified. When I use WINX, Newsie and CAB will crash on me big-time. They're quite stable when I disable WINX, but I _NEED_ my WINX....

What is this? Where can I get your patch? If there is a bug, why not ask
them to fix it? It's not that hard to ask even though some seems to
think it
is. :-)

> BTW, I don't know if there is only one version of the driver, or if it has
> variations according to card/computer.

I don't realy know. I omly know that when you buy the Nova there is a
special folder for the AB040, so there should be some difference but
I'm not sure. Try it and see what happens. You can find it at my
webpage.

There was a hardware diagnostic cartridge that Atari used to trouble shoot
ST's in the factory. It might be possible some people were able to order them
from Atari dealers.

This cartridge had a menu driven test program which could test the ST at a
very low level. You needed an external terminal, as the program used the
serial port as an interface.

Probably hard to find nowadays.

Running Gembench will not test the serial /midi/printer ports.

You would also need to test the floppy/ DMA interfaces.

Lunkily, the ST is not difficult to understand & most of the interface chips
are standard parts, so data is available.

You would be advised to purchase a service manual, a very worthwhile
investment.

Good question... I think it was in a german magazine called C'T technik or
something like that. I also seem to remember that one of the c.s.a.s regulars,
Hallvard Tangeraas, built one of these adapters, only to find out that it
wouldn't work on his STE. Maybe you could contact him.

Cheers,

Nick.

Hi Matt,
I am not sure which version that person was referring to, but the
2.6x versions have been very stable. You might want to look at your
system more closely. You may have something else that is causing this
memory chewing up.

The latest version of the drivers is v 2.66.

BTW, we have a newly updated webpage (I know, in there it says 2.62, but
at the time, that was the version I was aware of, until 3 days ago!)
http://www.magma.ca/~nima

Hi,
The price of the Falcon Nova cards has been drastically reduced
(299 US$ for 2MB M64)
Last Saturday, when I checked with ComputerInsel, I was notified that
the latest version of the drive is 2.66. I actually forgot to change it
on the web site. I will do so soon.

I am suprised that you actually checked out the web site so quickly.
It was all uploaded and check out last night!!

If you really need to test the computer capabilities, then you must
have a diagnostic cartridge sold by Bestelectronics ... I have one for
my TT and this helped a lot a few months ago ... a friend of mine own
the Falcon version ... I suppose it exists the ST version.

You could try a null modem, available at Radio Shack (cheap). Run a term program on each computer and transfer the files. Ii¿½ve done it with a Mac and an ST. Im sure it would work with a PC as well

Just what is it that you are trying to test for? Are you trying to test the hardware ports and such. If I recall sysinfo doesn't test the hardware at all. You can buy a diag. cartridge that can put the st thru a series of tests. Memory / Os / ports / midi / video display / sound / floppie drive / etc. though this isn't a cheap way to go. I have this setup as I repair the ST, also the 8-bit

> They're quite stable when I disable WINX, but I _NEED_ my WINX....

No problems here. WinX is _indispensable_ (for me at least) on my Falcon
in single Tos. It works also on my 1040STf. No need to load Gem in ram
with the STf (Tos 1.02).

BTW, what do you use to load Gem in ram ? I prefer gemram but romspeed is
good too. The former allow you to set environment variables.

That's very weird. If I try to run Stoop in a res less than 640x480 it tells me I need at least 640x480, just as it says in the docs.

Aha, that sounds familiar to me. You see on my Hades I use an ET6000
graphic card with the NOVA driver v2.61. When I view a page which
contains a large animated gif my system runs within a few minutes out
of memory (32 mb).
Medusa System has told me that it was probably a driver problem but
with the newer version of the driver I still have the same problem.

You mean 'test' rather than just discover what is there?

There are some freestanding progs. which test RAM. The best is
probably the prg which comes with the Marpet RAM extension.

There are also some which test HDs. HDCHK13 is one but it only works
on the ACSI port.

I use to crash all the time when going to AltaVista and Yahoo. (On my TT)
it turned out I had to use a different CAB.OVL file (the 1.5 '030 just
wouldn't work).

I'm using 1.28 (non-'030) and everything works great now. I'm so please I
purchased CAB 2.54 (after working with 1.5 for ages). Wow! 2.54 is
GREAT, fast and I haven't bombed out in ages!

Another problem I had with the old CAB.OVL with 1.50 (didn't happen with
the demo 2.0 of CAB) was the graphics would load 4 times before the page
came up! That really slowed things down.

Now, I'm looking to get a Multitasking enviroment so I can telnet and CAb
at the same time! Anyone with advice, I would love to get it... Send me
some e-mail

Again, thanks to everyone who helped out there: I now have my 2G HD
going, new battery, 18M... Next hardware... A graphics card! <g>

2.66 didn't work on my TT. The driver sta_vdi.prg actually does run (I can see the screen prompt) but something conflicts with it during bootup and the video goes 'all-white' (fixed only by a cold boot). I tried rearranging the boot order but the driver just doesn't seem to work on my system. Normally I run 2.61 on a Nova Plus 64.

HSH's Web page vaguely suggests that the 2.66 driver is 'generic' (TT/Falcon/Hades). Maybe Roland is right and the drivers have variations according to card/computer. What do people have 2.62 running on -- a Super Nova?

3911. CAB Colors II

Newsgroup: comp.sys.atari.st
Date: 1998-02-25 00:00:00 UTC
From: roughley@HORMEL.unix.dsoe.com
Message-ID: <6d26vq$ctt@thoth.portal.ca>
Source record: 106880

About the CAB colors... I understand 'Netscape safe' colors now, this based on what Alexander posted and from what I could glean from Web tutorials.

I found a document that says browsers in 16- or 24-bit modes aren't, of course, confined to these 216 colors. If one defines, for example, a <bgcolor=#$$$$$$> that isn't one of these 216 colors, the RGB value displayed in the browser should be exactly _that_ color and not be 'brought down' to a specific color table (like 'safe' colors). CAB does this in 16- and 24-bit modes, yet Netscape doesn't. Images aren't affected of course -- just those colors defined within HTML (fonts, backgrounds, rules, links, etc.). Some sites don't use 'Netscape safe' colors, as they assume everybody visiting has 65K or 16.7 million colors in front of them. A good example is a site which defines one of those fancy Netscape background colors: CAB just rounds it to the nearest safe one, even though the video is there to show the original RGB values (Netscape's soft whites are a good example).

The gist of things is that CAB 2.5d isn't exactly color accurate in high- or true-color mode. I can appreciate the browser adhering to safe colors, but it would be nice to have any HTML-defined color viewable while in extended video modes.

Thanks to all those who stopped by the test page and sent their results. I'm a big CAB fan, and admire the work Alex has done.

3912. Can someone tell me the name of this game and where to get it.

Newsgroup: comp.sys.atari.st
Date: 1998-02-25 00:00:00 UTC
From: deano@zetnet.co.uk
Message-ID: <34f3f4fc.12890400@news.zetnet.co.uk>
Source record: 106881

Theres a game I saw on the ST years ago, and all I can remember about it is that.....you are traveling in some kind of spaceship and you have to rescue people from mountains. On some mountains there are green aliens who bang on the cockpit window and smash it ending the game. Its a 3D type game and the view is from the cockpit.

Does anyone know what its called and where to get it?

Cheers

Howdy

As the Doom Source Code is released as Freeware, wouldn't it be possible
to include standard Doom logic into Bad Mood, so that you could network
play with PCs?

Oh, yeah, that'll rely on an Atari Falcon network card! No such thing,
damm!

It sounds to me as if you are describing "Rescue on Fractalus" also known as "Behind Jaggi Lines" (I believe this is a Beta or Pirated title). In any case, it was released by Lucasfilm, but only for 8-bit computers (Atari 800, Commodore 64) as far as I know. I would be quite pleased to purchase an Atari ST version of this game, and for that matter, I'm not quite sure why this great game has never been updated.

>in the Opus docs ?

Don`t think he is around the Atari sceene anymore. It is 4 or 5 years
since I had contact with him. It was via AtariNet.

Havn`t seen him in any NG or conf. on any network. I remember he told me
he was living 80 miles from his postbox office.

I`m still using Opus 2.23 on the STFM, but it won`t be long before I had
to buy Texel. It is the only spreadsheet that has any support left, that I
know of.

No. How should CAB know in which file to look for these information?
Remember, there are about 10 different desktops in use (Atari Desktop
with DESKTOP.INF, Atari Desktop with NEWDESK.INF, Thing, Jinnee,
MagXDesk, NeoDesk, and some others). Each of these desktops use
different configuration files in different formats.

A temp fix would be for those that use Newsie to install Everest
as the off line reader. It can "fix" these problem messages. It does
take a little more effort to reply, I guess. Actually, if a message
runs off my screen at 1024*768, I figure it is some sort of Microsoft
advertisement and just pass it by:).

Mike

3922. Another totally out of it question. How do you load ACC files?

I had exactly the same problem with Newsie and my ISP (Zetnet). In the end
I, too, got themto kill my mailfile :(

Owing to a slight argument between my Falcon and my soldering iron (which
I'll deal with some other time, once I've caught up with the newsgroup),
I'm
now picking up my mail on an Apple Newton. Thankfully the mail app on it
(and
also the news app) have size filters, and is able to delete messages without
downloading them. I've not used the very latest version of Newsie, but if
this isn't a feature in it yet, I think it definitely should be.

BTW I was connecting via STiK

Cheers,

Xav

I've come across anifty little sample editing program on an FTP
site called MERLIN2 ...its really great for editing, filtering,
recombining samples in interesting ways...but I can't seem to get the
samples in any kind of usable format (Sound Designer, AIFF, WAV...ANYTHING!!)

Has anyone here come across this program? found a way to convert
or export samples in a usable format to load into a sampler??

Any help appreciated...

regards,
Graham Collins

>The Emailer is on the market and people will buy it.

They should stop right now until it is fixed. And the folks with
previous versions should get a free update.

>You can't scare away people from the discussion forums.

No, but you'll find lots of people will not reply if they have to
format the thing themselves, if they even get it (below).

>It probaly was wrong by ASH to not use some Internet standards,
>but they haven't ignored everything.
>I can read all the messeges in this forum with Emailer with no problems.

So can I, but I cannot read them while *replying* to them unless I
format them manually. This with a PC using Agent!!!

>And the opposite is that there's noone using the
>28.000 Newsareas on the Net that have problems with the long lines that
>Emailer makes, except users in the Atari areas.

And potentially all other computer users.

>so this crap (all the discussions here) about standards is irrevelant.

It is entirely relevent. See below.

>Noone of my PC and several Mac users have problems to read my mails,
>so where do you think the problem is?

Ticking away like a timebomb. The usenet protocol (nntp) only requires
a line length of 512 characters. What does this mean?

Simply, that from the moment your article leaves your machine, each
and every ISP that gets involved with your article is quite at liberty
to chop off all the extra characters. ie these folks ...

news.demon.co.uk
dispose.news.demon.net

news-lond.gip.net
news-peer.gip.net
news.gsl.net
cpk-news-hub1.bbnplanet.com
news.bbnplanet.com
news.algonet.se
pepsi.tninet.se

... this time for me, next time it'll be a different lot. And for someone else it will be completely different for the same article you posted. You can't even say the 'demon' stuff will be the same even though they are my ISP. This is because they run multiple news machines in clusters (synchronised so you don't get the same article twice).

>o.k I admit that they have a default option set in their e-mail apps
>that break lines but this feature would be something for NEWSie.

But when Newsie gets fixed for it, you then need to email all the above people plus every other ISP in the world and any other network running nntp (including the military who developed such protocols to be "nuclear war" proof) and tell them that the nntp specification has been changed so now that the line length is arbitary.

"Arbitary" of course includes the term "infinite". You will of course have the answer when all involved ask of you how their computers are supposed to allocate the memory to process even a *single* news article? Infinity is a tricky thing to process - takes a while.

And no, it is not good enough to sidestep the issue by stating they can keep allocating more memory until enough has been obtained. News servers are possibly, if not the most, overworked pieces of kit on the internet. The demon news clusters for a good proportion of the time are not even the same machines running the same software - constant upgrading of software and hardware makes this so. What makes them all hang together is adherence to the nntp RFC. When a cluster fails it can takes *days* for it to catch up with the others and become synchronised (and usable) again. Why make this process more painful than it already is?

Well you don't. You do what many ISP's do already to save money. Just drop the groups that aren't worth processing. It just so happens the groups that aren't worth processing are the ones with "not as much bandwidth as others" which means the porn groups will be around long after comp.sys.atari.st has vanished.

Methinks it is easier for all concerned if half an hour were spent introducing an option into Emailer for carriage returns to be inserted at 65-72 characters perhaps?

Hmm. Another point. Mime and uu-encoding. Notice both introduce carriage returns. Now you know why. Even these darned html postings use a mime header - otherwise all the horrible html might get lost

en-route!

I've gone over the top admittedly but it is important we understand
the ramifications of what you propose!

Yes, that's strange. Also, wasn't TOS 1.02 the version installed in Mega ST
computers only (blitter tos) ? I also thought that all the "non-F" machines
had only TOS 1.0. If so, maybe your machine has some home-blown eproms.

Cheers,

Nick.

: I wonder if there is a way to use them both?

I expect that there should be no problem about this, provided that the cards can be configured to use different address spaces. If this is not possible, I expect you could make an adaptor to cause the cards to appear in a different address space to that which they are designed for.

I don't know whether you have a problem with these cards with interrupts or other resources where the cards would need to not conflict. Maybe someone else can give more definite answers.

Martin Byttebier (martin.byttebier@ping.be) wrote:
: N.AES uses AES 4.1.
: Is it possible that *multitos* can get along with AES 4.1?

Atari's AES 4.1 is a particular version of the AES that you can use.

"Multitos" refers to a package of MiNT and Atari AES 4.0. Basically AES 4.1 is could be considered a newer version of "multitos". It's really nonsensical to talk about AES 4.1 getting along with multitos, since they are one and the same.

When you say N.AES uses AES 4.1, you mean that N.AES supports the same features as AES 4.1, or that it supports the AES 4.1 specification (if there is such a thing).

Can't check it right now but I think its in 320*200 on boot up (its
definately in a 40 column mode)
Stoop appears to change into the correct res when it runs, as 640x480 is
not possible in 40 column mode this must be what it is doing.

Another reason I can be sure that it is not in 640x480 is that some ST
games refuse to boot from floppy if the boot res is set at this and so I
leave it in a 40 column mode.

Well, it seems to be original Atari-ROM chips. C101631-002 & C101632-002.
Is it possible to derive the TOS-version from these partnumbers?

>with the STf (Tos 1.02).

Are you saying that Winx and Newsie work together on your system? I
tried this several times, with always the same results. WITH Winx,
Newsie would crash on retrieving a large group overview (more than 20
messages). WITHOUT Winx Newsie was quite stable.

I should clarify that WINX is dependant on GEMRAM. I disable WINX by
disabling GEMRAM, so the real conflict is between GEMRAM and NEWSIE.

>BTW, what do you use to load Gem in ram ? I prefer gemram but romspeed is
>good too. The former allow you to set environment variables.

I hadn't heard of romspeed. I'll check that out.

Unless of course you are running an environment like Geneva where you are limited only by memory (not strictly true I think there is a 255(256) limit).
But who needs that many ACC's, I get by with about 10 :)

That sounds really good, I would like to try that out. Does it work with
new version of STinG?
Esp. concerned with PPP connection.

Of course, but everyone hates spam (with the exception of those people making money from it) so I don't condone that at all, but I see nothing wrong with setting up an internet cafe style arrangement, which could prove quite profitable in some areas. I know someone who charges £3 for 30 mins online, I'm sure that they'll be covering costs at least if not also making a healthy profit.

3958. News from www.atari.de

Newsgroup: comp.sys.atari.st
Date: 1998-02-26 00:00:00 UTC
From: szhays@catbert.ucdavis.edu
Message-ID: <6d2mte$47o$1@mark.ucdavis.edu>
Source record: 106771

I saw some news at the website www.atari.de that I thought merited translation and distribution. I hope this is considered appropriate (my translation may not be the best). I think many will find the Milan news particularly interesting. Please note, I've included prices in US dollars as well as the German Marks for my own benefit; these numbers are simple conversion of the original German prices at the going currency exchange. Obviously other factors will be considered by local importers when they set prices for any of the products these choose to import.

#----------8<----------8<----------

Neon Grafix is available again:

The well-known Raytracing program "Neon Grafix" from the company Team/Compo is now available again from Falke Verlag. The new price is 149 DM (U$83), and the program can be supplied either on CD ROM or several diskettes. There are separate versions for TT and Falcon, so please specify your system when ordering. Neon will also soon be available for the Milan. SUPERSPECIAL: At the April 4-5 Neuss ATARI fair, Neon will be available at the exclusive price of 49 DM (U$28).

#---

New game for the Falcon

The house M.u.C.S. presents a new gmae for the Falcon, a graphically responding puzzle play, which is to appear to the ATARI fair in Neuss. The price will be approximately 30 DM (U$17), and first tests of the program ran absolutely perfectly!

#---

Milan delivery dates now known:

Finally: The Milan has gone into producting. The first dealer and developer units are expected by the middle of March, just in time for a world premiere at the Frankfurt music fair. Final customer units are expected to ship at the end of of April as larger numbers of items become available. The base package, with a price of 1499 DM (U$833), contains 8 MB-RAM, a hard drive, keyboard and mouse, a 2MB-Grafics Card, a completely revised TOS 4.x as well as the Milan Multi OS, data-communications software, and several user programs like, for example, "Papyrus Home" and perhaps also "Milan Communicator." Stores accross the rest of Europe will be supplied approximately 6 weeks later. The Milan homepage goes online on March 3, 1998 at http://www.milan.atari.de

#---

Neuss Spring Atari Fair

On April 4 and 5, 1998, the first Spring Atari Fair at Neuss will be held. Due to the many customer and exhibitor requests, it is now desirable to hold, for the first time, a spring Atari fair in addition to the regular winter Neuss fair.

As has been the case since the end of of 1996, the venue for this event will be the town hall, at the center of Neuss, a town near Duesseldorf. Currently, almost all of the exhibitors from the past winter's show have confirmed that they plan to be there.

Many visitors and exhibitors from abroad will be in attendance, creating ever more of an international character to this event. The large fair runs daily from 10:00 am to 6:00 pm.

{driving directions ommitted. Sorry, I couldn't make sense of them myself, actually}

>If however, you don't think you'll ever, ever upgrade,
> then the $99.00 price for the populated Ram Gizmo board is a deal... ;(

99 $,how expensive !!
even here in France,we sell our memory boards
cheaper (CENTRAM 14) and it works until 25Mhz
acceleration (50MHz Videl) !!
the problem is you can't use reliably memory
boards with 4 simms because they "suck" the
electric signals, only boards with one single
simm will work reliably,some 70 ns simm
are good but at 25MHz better use 60 ns ones...
(avoid those that have components on both
sides,they're usually bad...)

>Thanx Frank

Frank,

Installing the CATT on a TT can be an ordeal. Before trying, read the documentation very, very carefully. If your TT has a revision "B" mother board (docs give an explanation on how to determine), your best bet would be have a good service person do the installation.

The CATT just increase the clock speed on the TT to around 48 MHz. Some programs that are speed sensitive will have a problem - but most the normal productivity software runs fine.

Neil,

For a long time I used version 2.08 as it was the most stable of the
then available drivers. Have been running for the past year or so with
2.52 without any problems. With each of these versions there were two
drivers, one for 6800 machines and one for 68030. If you are going to
use the Nova driver with NVDI the you do need a version above, if I
remember correctly, 2.60 (2.61?). Unless HSH did some fancy programing
there should be different versions for the 6800 family and the
68030,40,80 processors.

Goody goody. I can't wait to try out the new toys. As Dan posted into the newsgroup his interest in employing this technique in CAB.OVL I am optimistic. I just hope it works with Geneva. By the way, did you get Dan Wilga's e-mail about that call you spoke of as possibly being missing in Geneva? Apparently the call does, and has always, existed in Geneva, albeit with a slightly different nomenclature (which may have actually been my own type-o, as I am quite prone to them as anyone following this newsgroup can no doubt attest to). Well, I'll try the new Telstar directly and report back shortly.

3963. Sourcing Linux

Newsgroup: comp.sys.atari.st
Date: 1998-02-26 00:00:00 UTC
From: ben@imperial.co.uk
Message-ID: <6d37m4$7ot$1@nnrp2.dejanews.com>
Source record: 106776

Hi All,

I use AIX and SCO UNIX systems at work on a daily basis. I would like to have some form of UNIX at home for programming, and teaching myself the aspects of UNIX that I am not so familiar with, without the risk of distroying the data on our UNIX systems at work. As SCO OpenServer or AIX is not available for the Atari range of computers, I am considering installing Linux.

Could anyone tell me where I can find the complete Linux package for the Atari platform, either on the Internet, or perhaps a PD Library that can supply the complete package on disk or CD.

Secondly, does anyone know if Linux will run on a Hades, and would it also be possible to setup a dual boot, so that I can either boot into Linux or TOS?

Thanks.

Regards,

Ben Hills.

Hmm, unfortunately the background resolve is still locking up my system for one minute (until the resolve times out) if I try to resolve an address that doesn't exist. So this new trick does not seem to do the trick under Geneva anyway. A bit of a dissapointment, but perhaps I've missed a trick?

Otherwise, the new TelStar seems quite a nice terminal emulator. Even if not the full set of vt100 codes is supported, at least enough are to run pine and tin and stuff. I'm happy to see support for the clipboard (copy and paste) are high on your list of things to do. Might I also suggest that the "Open Session" dialog also have a few commonly used hosts (perhaps set using a new Options dialog) that could be selected from, so as to avoid having to type the host in each time.

I have tried 2.62 and 2.64 with my Afterburner. Both worked ok except
that the NOVA VDI didn't like the D&I cache enabled on the 040. V2.66
corrects this on my machine. However, it dies a quick death if I use
fast ram for the CPU copyback cache:).
I am using NVDI 4.11R3 under MiNT.

I take this back. Pine works fine (pico too, and the shell), but tin seems
to be using a screen clearing method that is confusing TelStar. This
didn't use to happen with the earlier version of TelStar, so must be
related to one of the changes made between 0.8 and 1.0.

Doubtless someone will answer the question you actually asked, but you might like to give http://www.netbsd.org a visit as well.

> Secondly, does anyone know if Linux will run on a Hades, and would

At least one person is running NetBSD on a Hades. As for the dual-boot thing, it should be possible if your HD driver lets you choose the boot partition. On my Falcon, I currently boot NetBSD from TOS by double-clicking on a desktop icon, but that's just an interim measure until I feel bold enough to start fiddling with boot sectors again. :)

I didn't think about TT MegaST users, only Falcon users. Sorry. I guess
Falcon, MegaST and TT must differ as the expansion port are at different
addresses. It could be that the VDI is the same but the emulator must
differ in some way.

I don't think it matters if it's a Super Nova or not as long as it has
got a Magch64 chip on it. The same driver supports 1, 2, and 4Mb of
video RAM, as long as it's for the same computer.

I want this, but does it work with a Nova card??? I know that the Falcon
version doesn't but maybe the TT version does? Or maybe even the Milan
version as it must use a graphics card on that one. Anyone knows?

: How do i go abouts doing this? My friend just
: bought redhat linux for his PC on a CD with a
: installation program and everything (by every
: thing I mean Netscape , x11)

I have heard that Redhat is on its way to develop a linux-m68k-release, as well, but I have got no idea how far they are.

: Is there such a CD for TOS?

There is an unfortunately outdated CD from Whitline with the ALD-distribution.
This thing confronted me with several installation failures due to missing SCSI-reset (kernel too old) leading to timing problems with the SCSI-devices.

I recommend to fetch the Debian-collection from a ftp-server like: ftp.debian.org, ftp.de debian.org or ftp.uni-erlangen.de.

The installation software is not exactly famous for excellent user-friendly handling, but it works and you get a fine Linux-system with a more modern kernel (least 2.0.29). For sure, the real work starts, when it comes to setting up the system to individual needs.

Regards,

Kerstin

And you do have a printer connected to ST now then?

> Why don't you send me the new data file or havent you written it yet,

Well, I have the version that I did, so it does not have any tags or
anything in, so I think I'll try and C&P that one in and then reformat it
to 52 chars across. And see if I find any more typos in that other data
file :)

> Lets get this finished and released :)

It may take some time, I'm thinking of the really long cheats.

Oh yeh, anyone who has any cheats for Atari games then please send them to:
kevj@clara.net
and I will bung them in the up and coming Cheater's Database :)

Kev AKA AtariMad that jolly nice chap from IRC

Well, about the docs, I _do_ have read it... I even read it again after your message, but I found NOTHING about MiNT-STiNG friendship... Perhaps I don't have the latest archive ? I'll have a look at your W3 site to check the newest one.
In fact, I have no problem anymore with STiNG+MiNT : they are lovely, together ;-)

The problem is that I have VERY low transfer rates with STiNG (It took me several minutes to get a 50Kb file, calling ftp.lip6.fr from France... The rate was something like 0.200 Kb/s, if my memory is ok... I think there's a parameter I should change, but the docs don't explain anything about what are the parameters in the CPX's. The only text displayed in front of the CPXs snapshots are something like "This is text" or "This is an exceptionnaly long line". Funny, but not very informative... :-)

NB : my Delay is at 10, my MTU at 1540 (this is ok for my ISP), the DTE is 57600 (USR 33,6), and all the other parameters are default.

Heeeellppp ! And thank you very much for your work ;-)

Yann

Hi David! Thanks for the reply. Yes, you and Titan Designs both agree that 72-pin (single) SIMM Ram boards are the way to go. I started to do that, (still kicking myself!) but after reading posts from other Falcon/Nemesis/ Ram Gizmo owners who said their setups worked fine, I decided to try it, and of course, it didn't work out for me. I'm still confused as to why it would work on (apparently) some Falcons and not mine. Also, one nice user sent me a .JPG of schematics and how to change the wait-states so that the Ram Gizmo might work. Any thoughts on that? Thanks again!

BTW, that $99.00 price included the board
and 16 megs of Ram... ;-)

:
: I want this, but does it work with a Nova card??? I know that the Falcon
: version doesn't but maybe the TT version does? Or maybe even the Milan
: version as it must use a graphics card on that one. Anyone knows?

I'd guess the Milan version will have to be modified to support the
Milan's graphics board, but I don't know what this means for Nova
compatability. Perhaps an e-mail to Falke Verlag (info@atari.de) would
clear that up.

Here're my questions:

: > revised TOS 4.x as well as the Milan Multi OS, data-communications
: > software, and several user programs like, for example, "Papyrus Home" and
: > perhaps also "Milan Communicator."

Anybody know what Milan Multi OS is? Is "Papyrus Home" some sort of cut
down version of Papyrus? And what is "Milan Communicator?"

: This is cool. I did also read that you would be able to add a Pentium
: CPU to this box and turn it into a PC compatible computer. Is this true?

I heard this some time ago, but the only authoritative answer would have
to be from Falke Verlag. Maybe when the Milan website goes online next
week we will know more about these things. I wonder if they will have an
English language page?

I think somebody should have told him how to pick which ones he wants to load. I'm not sure, but don't you have to rename the ones that you DONT want to load .acx or something like that?

Also, get a bootmanager which lets you pick which ones you want at boot time. Perhaps somebody could suggest a good pd bootmanager at umich for him? The machine I have came with Xboot, which is very functional.

Kev wrote:
> Crapman? I naturally assume this is a Pacman clone but what is it's twist?

The game was originally in the Synergy Mega demo. B.A.T.
of Synergy adapted the music routines for Falcon and
changed the direct sector read on the high score to
a system call for loading the high score.

I made some changes to get the game working on
1MB machines (the OS is killed on a one 1MB
machine, the game uses almost all memory, about
1000kB if I am not mistaken), made some changes
for 68030 processors and packed the game.

It a realy good pacman clone for maximal 2 players
in a split screen mode. Runs on any 68000 computer
with a ST low compatible video mode.

Great musix by Scavenger (one of the best chipsound
composers) and good graphics by Zanac. There are
50 levels ranging from easy to very hard. Animations
are played every X levels to show whats happening to
Crapman on his quest for love.

I never managed to finish the game (whithout cheating)
in single player mode. With to players it's Still a
hard job but certainly not impossible.

The game is available at the Atari archives of
umich.edu.

Hans

The program was featured on a BBC childrens programme hosted by Johnny Ball, running on an Atari.

Unfortunately, as far as I know it never made it onto the ST platform, unless Lucasfilm/Activision had done it quietly.

Out of all the formats; Spectrum, C64 and Amscrap (sorry, Amstrad), the Atari version was the best and fastest.

Oops! nearly forgot, the title:- Rescue on Fractacus.

I would love to see an ST version :-)

Cheers! for now

3987. Toshiba CD-Rom XM-330ITA Problems

Newsgroup: comp.sys.atari.st
Date: 1998-02-26 00:00:00 UTC
From: mike.borsley@zetnet.co.uk
Message-ID: <6d4frf$6mh$1@irk.zetnet.co.uk>
Source record: 106800

Hi everybody,
I'm getting problems with the CD Rom ie. it won't
work. The CD carrier ejects all the time, and when I try to access the
drive on the desktop I get the report 'O/P device hasn't received any data.

The driver I'm using is ExtendosPro 2.4A. I've tried it with and
without Magic 5.11, also without any other PRG's or accessories both at
boot up from the auto folder and from the desktop, but I still get the same
warning message. The computer is an STFM TOS 1.02 4mb ram, hard disk driver
CBHD.

I've checked continuity of all the connections which are OK,
voltages are 4.5v and 10.5v.

I would be glad of any help with this. The voltages seem to be
about 10% low, does anybody know if this would have any effect re this
problem?

Thanks for any replies
Mike

Actually, Peter didn't CC you on his reply back to me. The call in
question is an undocumented one that is not part of Geneva, which
accomplishes the same thing as the one I mentioned (which is part of
Geneva). It would require a change to one of the other programs (STing was
it?) in order for the call that works with Geneva now to be used.

I'll add the call to the next version of Geneva, but I can't even guess
about when that might be out.

I would also like to know if there is a driver for this printer
or for the Epson 400.
I�m intrested in drivers for both Calamus and NVDI.

Source record: 106809

I need some info on the Xtra RAM Deluxe STFM memory upgrade made by Frontier/Marpet.

I know you need to attach jumpers if you want to upgrade to 4 meg using the board. The problem is where to I jumper it?

Has anyone got an ASCII file of the instructions?

Thanks

Cheers! for now
Steve

FS> And... Do yourself a favour and forget Selectric. It's old fashioned,
FS> not updated and you can't get a key.

Hi Frank,

I'm not sure about the key for Selectric, but I used it for long time.
Dunno about the NEW versions of Boxkite, but I hated the "Russian Keyboard
Shortcuts" for it... :-)

And maybe Peter calls Freedom a "Schweineprogramm", so what about UIS-III?
So far I got no problems at all with Freedom. I'm not gonna say it's NOT a
Schweineprogramm, on the other hand I don't have problems with it. And believe
me, my set up is hyper sensitive to troublemakers... :-)

MEGA DISCZINE.

A new discmag for the ATARI.

Mega covers all of which is wired and different along with everything in life that you
never thought of. MEGA covers all of which that other mags do and a whole lot more.

Here's a list of some topics.

Dreams, Lucid, FAQ, What they mean
Hypnosis, FAQ, How to...
Reviews and news
Electronics
How to create your own lightning
Nikola TESLA, Inventions and more
Jokes, and silly stuff
Stories, true horror, fiction, ghosts (+ True) and general
STOS, Tutorial and tips
Facts of life and the rest
How to get rich
Near death experiences
Cold fusion
Death rays and lightning
Anti-gravity
UFO's and abductions and more
Meditation and Yoga

Plus lots, lots more. Download the first issue off my site...

http://www.users.globalnet.co.uk/~mega01/

Please take the time to contribute a article, or say HELLO and say your a proud
owner of a ATARI computer.

Issue 2 is out in a few days, A VAST improvement on issue1, in all respects.

Please E-mail me at..

mega01@globalnet.co.uk

Enjoy !!

Yep, this is correct - Stefan authorised me be a registration point for Selectric - and so far he has not asked me to stop. Mind you, he hasn't been in touch with me for ages and I don't know where to find him.. :((I posted in the german newsgroups a while ago asking if anyone knew his whereabouts, but no one knows....

I have some registration money for him waiting to be collected - the germans told me I should spend it and buy my wife flowersand wine and dine her... but the money is still waiting for Stefan...

I am using a borrowed Mac to get this on the net.

Have had no news access in about a year since my Univ.
changed hardware.

Has anyone beeen able to get CAB 2.5 to work?
or any other ppp/browser software for that matter!

I only have ppp and c-slip access and as I understand it nothing
but CAB supports ppp. and CAB apparently doesn't work
without magiC , which systems solutions failed to mention until
after selling the CAB package.

I am in dire need of www access, any suggestions?

tt030/multitos/nvdi3

Thanks for any help

Mike Marion

There was also a nice shareware .acc called Chameleon that when you
clicked on it, it brought up the item selector, and then you could pick
any .acc you wanted -- made it easy to simply create an ACC folder and
stash them all in there. Don't know if it worked with later versions of
TOS or not, but it worked with 1.6 on my STe (I have a Falcon now).

Lost your e-mail address, but if you can take $25 a month for that
Falcon ram upgrade you wanted to sell I can do that, otherwise go
ahead and sell it.

Hi Jim,

from what I recall, the latest version of UIS-III was TT compatible. Whether
that means it's Falcon-compatible too or not I simply don't know...

The one I've been using was 3.32 and to my belief that was the last update.

I have what you are looking for! The following software titles are
available, all original and complete with manuals in the original
packaging.

SOFTWARE TITLES

Renegade
Into the Eagles Nest
The Chessmaster 2000
Falcon
Falcon-Operation Counter Strike
Team Yankee
Midwinter
Midwinter-Flames of Freedom
Supremacy
Black Gold
Kings Quest I
Kings Quest II
Kings Quest IV
Road Raider
Manhunter New York
Epyx Winter Games
Final Assault
Impossible Mission 2

Foundations Waste
Crystal Castles
Ogre
Battle of Britain
Gold Rush
Empire
Red Lightning
Dragon Lord
Roadwar 2000
Operation Wolf
Labelmaster
STOS Games Creator
Printmaster Plus
Printmaster Art Gallery-Fantasy
Word Writer
Legend of the Sword
Leader Board
North & South
Popoulous
Out Run
Dungeon Master
Dungeon Master-Chaos Strikes Back
Batman
TV Sports Football
Thunderstrike

Also have fully functional Atari 520ST complete with colour monitor,
Star NX-1000 printer and extra mice and joysticks.

If interested reply to chrisrps@telusplanet.net

> accomplishes the same thing as the one I mentioned (which is part of
> Geneva). It would require a change to one of the other programs (STing was
> it?) in order for the call that works with Geneva now to be used.

That change cannot be done, though, that is the problem. The version that
is implemented in Geneva (and which for Atari is not documented either - it's
the docs for PC-GEM from which that was taken) is a real AES call. Therefore
for calling it, the application's global array must be known, however STinG
does not have that information when it comes to calling that function. Even
more, for TOS programs this information does not exist in the first place.
These are the reasons why the call that is supported in Geneva ATM cannot be
used.

Actually there is another reason. AFAIK there is no version of single-TOS that
supports that call, while the one used by STinG exists in all single-TOS, MagiC,
NAES, etc., just Geneva lacks it.

> I'll add the call to the next version of Geneva, but I can't even guess
> about when that might be out.

Good.

In our private conversation I suggested releasing a patch for existing (or
maybe just the latest) versions, which shouldn't be too hard for the author
I suppose.

Cheers Peter

Which system do you use ? Note you need preemptive multitasking to get this non blocking. So with MiNT it should do the job. MagiC would need to be a recent version (V5), as earlier versions need to load another binary as an overlay to execute something else in parallel. I found the gain not worth the effort.

So with MiNT another process is used for the resolver, while with MagiC 5 another thread is used. In both cases the resolve won't block anymore.

> that doesn't exist. So this new trick does not seem to do the trick under
> Geneva anyway. A bit of a dissapointment, but perhaps I've missed a trick?

The trick is to install MiNT.

> and paste) are high on your list of things to do. Might I also suggest
> that the "Open Session" dialog also have a few commonly used hosts (perhaps
> set using a new Options dialog) that could be selected from, so as to avoid
> having to type the host in each time.

Hmm, I had the same request by someone else recently, and when I wrote him my reply, he responded that he had a "User IQ too low error". I found that really funny :-)

So place your mouse pointer above the "Host :" edit field, and press the left mouse button ? What happens ? ;-)

There are a few other features I never had the time to write up docs for properly. Pressing the Backspace key sends a usual Backspace control character of course. In same cases it might happen that the other end's idea of terminal emulation is entirely different from what TelStar supports, and the Backspace key won't work anymore, this is a problem shared by all terminal emulators, be it a terminal program for serial lines or Telnets. In such cases still the generic Telnet protocol Erase-Character and Erase-Line commands can be used, which are invoked by typing Shift-Backspace and Ctrl-Backspace, respectively.

Also the Telnet protocol provides a couple of goodies which can be accessed by typing UNDO in an opened Terminal window.

These things also exist in V0.8 of TelStar.

The best explanation without having more info on your setup and your ISP
is that you use Van Jacobson Compression with a too old SERIAL.STX. That
STX must be a very recent version to work properly, the version in the
main distribution STING.LZH does not do VJC properly.

If that is the reason, switch Van Jacobson Compression off, or get a new
SERIAL.STX, by downloading MODULE.LZH from my web page.

> explain anything about what are the parameters in the CPX's. The only
> text displayed in front of the CPXs snapshots are something like "This
> is text" or "This is an exceptionnaly long line". Funny, but not very
> informative... :-)

That is stuff from early versions of the HYP. I guess it'll remain until
I write up all the details on the CPXs. But I wasn't talking about that
part. The docs contain a major chapter on "Frequently Asked Questions",
I expect people to at least have a look there. And the problem

YL> First, I wasn't able to use Sting under MiNT : it makes it lethally
YL> crash everytime I run it before the MINT.PRG.

is explained there, and also how to fix it : Put the offending program (MiNT
in this case) before STinG in the AUTO folder.

The MiNT docs say MiNT should run last in the AUTO folder. That is nonsense.
There are loads of reasons why there should be programs loaded after it.

> NB : my Delay is at 10, my MTU at 1540 (this is ok for my ISP)

Even though they *say*, I've heard of so many instances where ISP technicians
simply told crap. MTU of 1540 is a VERY unusual value. Try 1500, and try 576
too. Low MTU values cannot cripple your speed significantly.

> DTE is 57600 (USR 33,6), and all the other parameters are default.

You haven't told which machine you've got. Maybe it's worth to just do a
test with a lower speed, for instance 19200 bps (Modem can still connect
at 33k6 bps).

4028. For Sale

Newsgroup: comp.sys.atari.st
Date: 1998-02-27 00:00:00 UTC
From: cutshal@okstate.edu
Message-ID: <Pine.PMDF.3.95.980227222746.96856A-100000@vms.ucc.okstate.edu>
Source record: 106644

I have the following items for sale:

-Atari Mega ST 4
-Atari SM124 monochrome monitor
-Atari SC1224 color monitor
-Atari SLM804 laser printer
-Atari SF354 disk drive
-Atari SF314 disk drive
-Supra Drive 20meg hard drive
-Atari 800
-Commodore color monitor
-Atari 1050 5 1/4 disk drive
-Atari 830 modem
-Atari 1030 modem
-Microbyte 5 1/4 disk drive
-ST Software
--Captive
--Xenomorph
--Rick Dangerous 2
--Beach Vollyball
--The Immortal
--Dungeon Master
--LDW
--Zany Golf
--Lemmings
-Atari 800 Software
--Pacman
--Defender
--Missle Command
--Donkey Kong Jr
--Centipede
--Pole Position
--Star Raider
--Galaxian
--Basic
--Typo Attack
--Pilot
--Music Composer
--Atariwriter
-Miscellaneous stuff

OK...Lots of stuff....The 800 works along with the commodore monitor and I have tested all the game cartridges as of today and they all work. The Mega 4 works but is missing the cable to the keyboard(so really all I can say is that it boots up). Both ST monitors work. Could not test the

laser printer but I can only assume that it works(my parents always kept care of their computers). All cables are included except the keyboard cable as mentioned. Everything is as-is. Not sure how shipping will be handled(it depends on how far it is). I would like to sell it all together but I will consider selling seperates if the deal is worth it.
Send bids to cutshal_osu@osu.net
Thank you very much for reading.

MSC

: >without magiC , which systems solutions failed to mention until
:
: CAB needs preemptive multitasking, so it should work with MagiC or MiNT.

This is all wrong! CAB does not need multi-tasking at all, much less preemptive multitasking. True, some CAB modules have extra functionality under multitasking in the latest versions of the program, but CAB itself runs fine on plain TOS. And the _only_ part of the package that needs _preemptive_ multitasking is the PPP stack that ASH bundles with CAB (which I call I-Connect, as that is what all the dialog boxes within the program say, although I've seen tons of people call this program PPP-Connect and other confusing things!).

But remember! I-Connect is only one of _many_ ways of using CAB on the internet. If you do not own Magic, or Mint (the two TOS-like preemptive multitaskers) get STiNG or STiK as your TCP-IP stack. Of these two programs, only STiNG currently supports PPP, so that makes the choice easy.

And STiNG really is an easy choice. It is quite a nice program. Remember to get the appropriate CAB.OVL file (the bit that allows CAB to interface with a TCP/IP stack, CAB now comes with the overlay for I-Connect, but you can substitute the overlay file for STiNG/STiK and use either of these two TCP-IP stacks). Plus, once you start using STiNG, you can start using all the other STiK/STiNG compatable programs, like Newsie, TelStar, FracIRC, A-FTP, whatever.

: wondering if someone can tell me where I might find a decent IRC
: application and also a good MPEG player for it?

There are at least two IRC clients battling for attention, Frac IRC and Atari IRC. You can snag either (or both) at Flinny's STiK site (http://www.flinny.demon.co.uk/) once you get on the Internet.

As for the m_peg player, again you have several choices. 1st Guide will do mpeg1 (the readme indicates that mpeg2 is in progress). You can get it at (http://www.esc.de/homes/guivol/). The other mpeg player I saw was for audio mpeg2 files. Its from bITmASTER at (http://www.th-online.de/personen/bITmASTER/) or from the Internet underground music archive at (http://www.iuma.com).

: Also I haven't gotten my system completely organised yet and currently
: I'm running Neodesk and Geneva. I don't have an ISP yet and no
: experience setting up any browser for the internet. Can someone tell me
: how well CAB and PPP connect works with Geneva?

Yes, this is exaclty what I use. I have a Nemesised Falcon, running Geneva and Neodesk. I use STiNG for my TCP/IP stack. The latest version of STiNG is available from (http://www.stud.uni-hannover.de/~perot/index-e.html).

4036. Misc ST Items FS

Newsgroup: comp.sys.atari.st
Date: 1998-02-27 00:00:00 UTC
From: aa778@cleveland.Freenet.Edu
Message-ID: <6d5951alg1@alexander.INS.CWRU.Edu>
Source record: 106689

Hi,

Here's some Atari ST stuff that I'm not using
anymore. Those are my asking prices. I'm open to offers.
Buyer pays shipping. E-Mail me or call me at
440-729-0761 evenings EST. I am also open to trade offers.
E-mail me your list.

HARDWARE

Syquest 5 1/4" 44 meg removeable cartridges. Will be HDX formated and
verified good. each $20.00

Atari SC1224 Color Monitor. Unit is in perfect working order.
Comes with power cable. $60.00

Spectre GCR by Gadgets by Small. This is the Apple Macintosh emulator
for the Atari ST/STe/TT/Falcon computers. Includes cartridge, disks,
box, and an extra disk of misc ST utils. $60.00

Supra 2400 baud external modem. No power supply. $3.00

Fast Fax by Michtron. This is the original fax hardware/software
for the Atari computers. Works with ST 520 to Falcon. This is a
special Michtron 9600 Send/Receive Fax Modem with software. The
software is very efficient, powerfull, and simple. Send, receive,
view, log, and print, faxes. has drivers for popular printers and the
SLM804/SLM605. Use a spare 520 or 1040 as a stand alone fax machine.
Comes with special fax modem, diskettes, and manual. $40.00

SuperCharger by Beta Systems. This was one of the better IBM
emulators for the ST. Best part was this was an external unit
that plugged into the ST's DMA port and had it's own power supply
so as not to put any stress on the ST. This is an XT emulator
that is twice as fast as a regular IBM. The external box CPU is
housed in a beige case with a data and power lights, also has a
reset button on the case. The case has a DMA passthru port to
allow connection of other devices. Comes with all diskettes,
MS-DOS 4.01, a copy of the instruction manual, power supply
and DMA cable. You can have IBM and ST partitions on your hard
drive and hot key between DOS and TOS. When the IBM emulator
is not in use the 1 Meg RAM in the CPU case can be used for a
fast RAM drive under TOS. $60.00

GAMES

Imperium Game manual and registration card from Electronic Arts.
I no longer have the disks or box but for someone who needs
the docs here you go. $1.00

Conquest of Camelot by Sierra. Complete with box, docs, and disks $10.00

Gold Rush by Sierra. Complete with box, docs, and disks $10.00

S.D.I. by Mindscape. Complete with box, docs, and disks. $10.00

Plan 9 From Outer Space by Gremlin. Complete with box,
docs, and disks. $15.00

MISC SOFTWARE

Moving Pixels CD-ROM. This CD-ROM has Tony Barker's programs
and source code from all the programs he ever wrote for the Atari.
Includes programs like Atax, Brushworks TT, MIDI Battle, Offical (The
official Falcon Demo used by Atari), Tina (The 70 meg Tina Turner TV
comercial), TT Wars (The Star Wars Demo) $15.00

ST Control by Trio Engineering. A BASIC like language that
is closer to using normal language to program. Example
"Draw picture with Neochrome" Includes box and diskette
no manual. $5.00

BOOKS $5.00 each unless noted

Compute's Technical Reference Guide to Atari ST TOS Vol 3.
Includes fully commented C and machine language examples. $5.00
Thunder! The Writers Assistant manual. $2.00

MAGAZINES

I have a large selection of mostly 80's and early 90's Video Game and
Computer Magazines, Books, and Newsletters for various systems.
Please E-mail me for a current listing.

CAB needs preemptive multitasking, so it should work with MagiC or MiNT.

Otherwise, get STiNG, which will do PPP quite happily with CAB.

Cheers,
Nick

4042. Kirk to Spock/NOVA to Apex

Newsgroup: comp.sys.atari.st
Date: 1998-02-27 00:00:00 UTC
From: grovem@suluridgecrest.ca.us
Message-ID: <6d5odjnvh1@ash.ridgecrest.ca.us>
Source record: 106695

Now that I have your attention:).

Titan just returned my Apex disk that are now upgraded to V2.41. The ability to clip an FL* is a very nice improvement. Now all we need is some sort of compression:). Thanks to Titan for rapid overseas service.

Anyway, (and I am long winded), I was dreaming of Apex Alpha and for the heck of it, I launched Apex Media with my NOVA active (knowing full well what would happen:).

I got to thinking about the Videl blanker option in the TK. I went back and deselected that option, and rebooted. (TK as in Afterburner Tool Kit).

Once at the 1024*768 32K desktop the NOVA is set at, I launched Apex Media again. I reached over to my VGA monitor switch box and selected the Falcon video position. There, before me, was Apex Media in all of its glory:).

Everything functioned as normal, except I had problems getting it to abort loading a rather large flh file. The other trick is when selecting a file, you have to go back to the NOVA, make the selection, then switch back to the Videl.

Of course you know what I tried next. I launched Falcon Tripod. Same results. Capture a 1024*768 24bit image, then quit, go back to the NOVA and work in a decent video resolution.

The NOVA desktop was froze while Apex was running, but i'm sure that if you selected return to desktop from within Apex, then went back to the NOVA, you could leave Apex running while playing with the NOVA active.

Alternately, I guess if you just had two monitors connected, one Videl port and one NOVA, you could do the same thing without a switch box. Now I finally found a use for that SC1224:).

Sorry if this is old news, but I thought it worth mentioning.

Hi,

There are hundreds of programs for making music and listening
to music which you can download at
http://www.hitsquad.com/smm/atari/

There is mainly ST software but there's also some for the
Falcon.

The site has software for midi, MOD, audio, recording,
multi-track, MPEG, soft synths, drum machines, guitar tuners,
samplers, patch editors/librarians, mp3 players, sequencers,
algorhythmic composition, and heaps more.

cheers,
jason.

There is a patch available that upgrades UIS III to 3.32. I don't know if its
on the net, or some floppy I have. I'll look for it if you want it.
UIS III 3.32 runs on a Falcon, and will run under MagiC 5.11.

>MegaSte beyond 4 MEGS?

To my knowledge, there exists only one memory board designed specifically
for the MegaSTE. It is called "Magnum STE".

Magnum STE adds 4 or 8 Mb to the existing 4 Megs, i.e. it allows a 12Mb
MegaSTE. You need TOS 2.06 to run the board.

Check the Web page of the manufacturer: http://www.aixit.com

Oh well.

>I just truncate to about 100 characters. This seems to works.

Okay. :-)

I might experiment. Yeah, I will ...

[time passes]

There seem to be certain stages to it and it happens the same for both NAME and INFO.

The first stage for my test program was that it worked okay but the Ease window under the test app showed corruption when the test program terminated (ie Ease had to redraw its window under the test prg). This was round about 215 chars. I also saw the "huge font" problem appear in other unrelated applications depending on the circumstances of the redraw being performed.

The second stage seems to apply to the application itself. The test program got the "huge font" problem you described or other such corruption of its OBJECT tree. This was round about 240 chars.

The third stage (I tried 600 chars) caused MagiC to halt with "system destroyed".

Hmm.

Values of 210 or less worked ok. I dismiss this though because it is more likely 210 is actually causing "harmless" corruption otherwise values up to approx 255 should have worked iyswim.

So it is likely the actual limit is 127 imo. Does Andreas Kromke care to comment on these findings?

when I was having my initial teething pains with my Nemesis installation (it wouldn't boot in HI mode and would give two bombs when I hit the desktop), David Encill was mentioning to me that there was some sort of code in Cubase that, indeed, switches off Nemesis. I'm sure that if you get in touch with Dave he could give you an idea of how to go about fixing it.

BTW, I suspect that my problem stems from having the RAM Gizmo in my Falcon - I wound up fixing it by (discovering this quite by accident) using the NEMHI_AB program to boot with (this program is for booting in Nemesis HI in an Afterburner-equipped Falcon). Dave and I are surprised that this works, but it does :)

I have one of these populated to 4 megs. There were no jumpers on my board.
There were jumper wires supplied with the kit, to be used to tie the old RAM
chip RAS pins to +5 volts (disable chips to prevent access problems.).

The board was installed by placing one connector under the shifter & another
on top of the MMU. There were no jumpers to change on the STFM.

Ghostlink- makes the PC a slave to the ST, so that the PC partitions
appear (renamed if necessary) on the ST. Saves having to operate both
machines at once.

>If you had a zip disk

Zip discs are differently partitioned unless you set up the ST (e.g.
using magiC) to accept PC partition formatting.

So do I just to see what al the huh-bub is about.

-> > Is there such a CD for TOS?

I have LINUX included in my Atari Compendium CD although it doesn't have
the docs I've been told. I haven't even looked at it since I didn't
have a math coprocessor, but I do now.

-> I think there's a CD called Whiteline or Whiteline Alpha in the last Toad
-> catalog.(from 1995) And a Transmission (?) CD too.

I got the Atari Compendium from Toad but now I'd recommend lokking
elsewhere for it or Whiteline.

From: james.burr@acpu.com
Message-ID: <888587972@acpu.com>
Source record: 106718

Hello all!
I just finished Nemesizing my Falcon (although I still need a VGA monitor to actually see it work) and added a math coproccessor and a second IDE drive and I'm back even though I have some strange anomolies with it now with some demos and games.

I also added CAB 2.5 to my acquisition of registered software. I was wondering if someone can tell me where I might find a decent IRC application and also a good MPEG player for it?

Also I haven't gotten my system completely organised yet and currently I'm running Neodesk and Geneva. I don't have an ISP yet and no experience setting up any browser for the internet. Can someone tell me how well CAB and PPP connect works with Geneva? Since I don't have an ISP I don't know how to experiment with it.

THANKS!!

Later,
James

Hi Jim! Yep, the Chameleon ACC was just great. I never could get it to
work on my Falcon though. Also, sometimes (but not often) a rogue ACC
would not release vectors, and Chameleon couldn't change back so that
you could pick another ACC without re-booting. This wasn't Chameleons's
fault, though. I still use it on my son's ST! ;-)

Yes, you can build your own adapter :-) eMedia (emedia@emedia.de IIRC)
in Germany sells a PCB and GAL for this, you have to source the rest
of the parts yourself (ELFA has everything you need).

The interface is quite easy to build, and in addition to a
IDE-interface is also has sockets for TOS 2.06. Actually, 2.06 is
required if you want to boot from the IDE-drive.

I have one in my Mega ST, and it's excellent. It's reliable, and quite
fast as well. Quite cheap too, I think I paid ~NOK300 for everything,
including the necessary parts from ELFA.

4069. Mega STe To Tower? 2 Floppies, need help!

Newsgroup: comp.sys.atari.st
Date: 1998-02-27 00:00:00 UTC
From: kws@Radix.Net
Message-ID: <6d737h$q6n$1@news1.Radix.Net>
Source record: 106722

Hi!

I am in the process of putting a Mega STe into a tower case. I, so far, have been able to get all of the external ports to be useable EXCEPT the RCA stereo ports, and the external floppy port. Now my questions....

I have heard I can port 2 drives off of the internal controller, I would like to do this, but how? What type of cable (can I use a standard PC cable with the twist or does ti need to be flat?) do I need and what do the two drives need to be setup as? Right now I have 3 PC drives to choose from, 1 720k, and 2 HD drives. The 720k drive has 4 positions for drive select, and one of the HD drives has 2 positions. Right now I only have the standard drive controller, but will most likely get an AJAX chip in the future.

What can I do to make the RCA connectors accessible? I would rather not cut the case (I have gotten away with not cutting it yet and have full access to all of the ports in the middle without problem, the ISA slot holder was screwed in, and easily was removed!). Can I just goto Radio Shack and pick up some RCA cables, cut them in have and remove the insulation, and wrap them arround the connector somehow?

And the last question, for now at least. How would I connect the RESET button in the PC's case to the Mega STe? Is there an easy way, or is this not too simple. It should be relatively straight forward, I would think......

Thanks!

Hey. I had an atari st a long time ago and am looking for a game i used to play. I dont remember the name of this game but i remember what it was like. It was an overhead view of different maze-like areas. Your character was this beaver-looking guy who ran around getting different items and such. I remember a graveyard area and other areas. Different items would be hidden in the maze along with enemies. The main point i remember though was the beaver-guy who you controlled. If you have any information about the name of this game or where i could get an image please mail me at xtort@earthlink.net. Thanks
xtort

btw its not gauntlet.

To be honest, I should be embarrassed not knowing about 'safe' colors.

But based on 256-color CAB 2.6 screengrabs of the test page (thank you Joergen), I know now that the newer version is better with safe colors: the HTML and GIF colors were exactly the same, as isn't the case with 2.5 and previous versions. If the HTML and GIF share the exact color, _both_ should be matched to the nearest safe color. That's why the test results varied -- only two people were running CAB 2.6 (which does this correctly). What I don't know is if CAB 2.6 (and greater) allows any RGB value to be displayed if the video can handle it (no safe color-table 'kicking' in, altering once-subtle colors).

BTW, it might be worth mentioning that I had a palette problem with CAB 2.5 running in 256-color mode: When qed was summoned, it altered the system palette, causing CAB's window (behind qed's) to display 'swapped' colors. To fix this I 'topped' CAB, which alters the system palette, and then saved the new system colors to disk (in my case using Nova's Color Setup accessory). There's no inversion problem while multitasking now. Essentially my default palette has these 216 safe colors, besides the 16 standard ones that remain unchanged.

I have just bought an STFM for on behalf of someone, and after giving it a physical, I found it to have an Xtra RAM Deluxe memory expansion fitted.

I have tried to install 2 meg on the board, but couldn't get it to register more than 1 meg. I know when I upgraded an STFM in 1992 with the same type of upgrade, you were supplied with 2 jumper leads for upgrading to 4 meg. I don't know why it doesn't register 2 meg though!!!!

Cheers! for now
Steve

Let say you're wrong ! Cab works very well on plain Tos. Sure it's better
to use a multitasking environment but it's not mandatory.

> Otherwise, get STiNG, which will do PPP quite happily with CAB.

And on "only" plain Tos ;-)

Sharing MPEGs, what MPEGS, I have never mentioned, MPEGS, I do not know what
you are talking about, I don't even know what an MPEG is:-). Ok, I will stop:-).

Ok, I will set these in STing, and see how that works. But I think I will
wait to see the problem once more. So far everythings good again, but I haven't
received any new large files, which may or may not be MPEGS.

Would you like an MPEG:-).
Brian.

Thanks, I have considered trying another go at Popwatch. I am not certain as
this would solve the problem. However, I certainly could monitor the situation
a little easier if it gets out of hand again.

> IS VJHC useful on a STandard ST? I have been staying away from it, and my
> provider didn't recommend using it. What are your comments to this Peter?

It's basically a tradeoff between CPU time and transfer speed. VJHC allows
better use of the serial line bandwidth, but it costs CPU time. Basically
you gain speed, if CPU time needed for VJHC encoding is less than the time
the line had needed to transfer the saved bytes. So obviously one should
use it when having a fast CPU and a slow modem connection. With slower CPUs
the time for encoding will grow, while with faster connections the time for
transferring the "extra" bytes (uncompressed, compared to compressed) in the
uncompressed case shrinks. When they meet, one should stop using VJHC, as the
CPU will need more time for coding than is saved by the compression. I'd say
an 8 MHz 68000 ST with a 33k6 connection should not use VJHC.

I've never measured the actual performance of the encoding code, so any
recommendation is rough guessing. If you really want me to say something,
I'd say ordinary STs should not do VJHC compression if connections faster
than 14k4 are used. Falcons can use VJHC unless ISDN is used. With TTs,
using VJHC should be ok in any case (well, unless a direct link at 230kbps
is used). But you're warned : This is just guessing. Anyway, using the
worse setting will not do much harm, you won't feel the slowdown, unless
it's shown in some measurement (by CAB or an FTP client for instance).

Speaking of speed, I should mention that I just rewrote the code for cal-
culating the TCP checksum. I had used a straightforward C implementation
of the algorithm described in the TCP RFC. Now a handcrafted assembler
version is in place. I tested the new TCP on an Ethernet line, where the
CPU speed of that 8 MHz 68000 ST I used is indeed the bottleneck. With the
newer TCP, I gained a speedup by 40 % !

Cheers Peter

I use SuperBoot 8.1. Written by Gordon Moore.

T > There was also a nice shareware .acc called Chameleon that
T > when you clicked on it, it brought up the item selector, and
T > then you could pick any .acc you wanted

Lots of great tricks you can do with The Chameleon, including
loading .prg files as .accs! If the program in question only used
one screen, it would ordinarily run just fine - but bomb on exit.

I don't use it much now, with MultiDesk in the machine, but it is
highly recommended if, like me, you like to load any old .acc that
shows up, and have been burned by the eternal boot problem.

I can tell you that I had fairly severe problems with my CaTT before
it was removed. Any program that accessed the fpu crashed on fpu
access. This doesn't sound like a big deal, since there aren't very
many such .prgs, but the number grows every day, seems like.
The CaTT was also suspect for unreliable cold starts, and for SCSI
bus transfer problems. Alex removed mine for me, due to these
problems.

Signum, Harlekin, Script and Neodesk are all commercial, so you'd have to
buy them even if you want to use them on the emulator.

As for PD software, check out the FTP sites.

Yes, you need an IDEal interface from TUS in the UK. It's STE only and
mainly designed for use with an internal 2.5" IDE drive. Using a 3.5" drive
would require an adaptor and a tower mount.

4096. How to get SCSI Zip running w/BigDos on Mega ST2???

Newsgroup: comp.sys.atari.st
Date: 1998-02-28 00:00:00 UTC
From: Charlie Wood <spidersi@sprint.ca>
Message-ID: <888808062.547562@michelob>
Source record: 106596

I have a mega st2 and ICD's FA*ST acsi to scsi box with an 85Mb scsi drive
inside.

I also have a scsi zip drive that I would like to use to transfer files that

I download with my PC onto the Atari.

I've read on this newsgroup about BigDOS and HDDriver being used to do this
but haven't a clue how to do this.
Could anyone be kind enough to send me instructions on how to set up
BigDOS and HDDriver to see my zip drive.

I should mention the TOS on the Atari is 1.02(1.2) <-- Will I need to
upgrade this??
Also the scsi ID on the ICD box is set to 0 will I need to change this when
I add an external device??

Thanks in advance.

Perhaps people call it PPP-Connect because that's what it's called in the press releases and in the manual? I don't know why ASH uses two different names for the same program.

The information I had intended to put in my previous post was that I believe any EPSOn ESC/P2 driver will work with the Epson 600 and perhaps the older 24 pindrives like the LQ will also work. I'm told by the Epson technical help line that the EPSON 400 is a windows only printer and will not even work on a PC just running DOS. I can't prove this as I wasn't about to buy one after being told it wouldn't work.

Nemesis gets switched to Low speed as soon as any data goes through the midi port - it's some sort of bug in the Falcon. If you really need to keep Nemesis at high speed for Cubase (it would be nice), you can hardwire the card to High Speed. You then cannot use the software switches to go to low speed. I didn't do this because my system seems to need low speed for printing.

Cheers

It is only if your ST has a port fault and many I have seen do have this fault that Atari never seemed to get rid of. Also HSMODEM gives you higher transfere rates because it re-writes the Atari's built in procedures for this.

4107. Re: Help: Xtra RAM Deluxe Info

Newsgroup: comp.sys.atari.st
Date: 1998-02-28 00:00:00 UTC
From: dwmoar <dwmoar@teleport.com>
Message-ID: <34F82E9B.27F0EC9@teleport.com>
Source record: 106661

Did I miss something here..... I have a couple of Xtra Ram deluxe boards here and nowhere in the docs that are with them do it say anything about turning off the stock memory when upgrading. They have two cables on them one going to the MMU and the other going to the video shifter. The manual does however tell you how to connect the board if you have a SMD (surface mount device) video shifter or MMU. Neither of the Xtra Ram Deluxe boards that I have have any other wires on them nor do the manuals tell anything about turning off banks of memory. If I recall the Xtra Ram Deluxe board actually does this thru the MMU adaptor. One of them *&*^*& pins has a epoxie coating on one side. Thus keeping the mmu from sending information from that pin. I am going to assume that you have checked all your connections to this board. IIRC the MMU adaptor was the source of the most problems. Just a thought. Good luck!

Atai*Dave

4108. HELP! Dr. T's "Copyist" disk corrupted!

Newsgroup: comp.sys.atari.st
Date: 1998-02-28 00:00:00 UTC
From: bm827@FreeNet.Carleton.CA
Message-ID: <6d9bfu$13k@freenet-news.carleton.ca>
Source record: 106662

My Dr. T's Copyist "program" disk gives me the dreaded "TOS 35" error message whenever I try to run any of the programs on the disk (the "data" disk is OK, as far as I can tell).

Can anyone help?

Randy Kwak

4110. News about Studio Son

Newsgroup: comp.sys.atari.st
Date: 1998-02-28 00:00:00 UTC
From: C&#65533;dric RICARD <cedric.ricard@hol.fr>
Message-ID: <34F84136.CB076DC2@hol.fr>
Source record: 106664

Texte en Franï¿½ais aprï¿½s...

*** IMPORTANT ***
Our publisher has changed. It's finished with Studio Capitale

Our new one is :
CENTEK
4 av. St Exupï¿½ry, 60180 NOGENT S/OISE, FRANCE

****
*** A new release of Studio Son is ready (v 1.78.9) :

+ You can change the virtual tracks number (up to 1024 !!). For the moment, the Falcon can only have 8 real tracks, but with other computer, like Phenix ((c) CENTEK), we will able to have more easily. And Studio Son is ready to use its.
+ The Soundpool SPDIF/ADAT is now fully implemented in Studio Son.
+ The Wave import bug is definitely fixed (if the Microsoft documentations are good...).
+ With some Falcon, it was impossible to have sound at 49, 44. and 48 KHz. It's fixed now.
+ Some new toolbar have made their appearance. We have now one toolbar per tool (one for the editor and one for the timeline, for the moment). But one very

important miss. It's the main tool bar (a new one). So, actually, its buttons are still on the Editor Toolbar.We're actually working on it.
+ Debugging...

- The Documentation is not yet updated for the new tools (and first for the Timeline !!). But we're working on it too. In 3 week, a french version will be available. And the english version will come a few time after...

Since january, there not a lot of new functions. But there are some essential corrections. And we have work on tools who're still in development (like a new chutier, the DSP plugins,...).

Of course, you can download it at :
http://www.emi.u-bordeaux.fr/~ricard/

Mailing list :

To automatically receive all news or new official version of Studio Son, just send me a mail to tell me what you want :
- Studio Son News
- Studio Son V2 (French) : about 600 Ko
- Studio Son V2 (English) : about 600 Ko

********** FRANCAIS **********

*** IMPORTANT ***
Notre Editeur a changï¿½. Ce n'est plus Studio Capitale.

C'est la sociï¿½tï¿½ CENTEK qui prend le relai.
CENTEK
4 av. St Exupï¿½ry, 60180 NOGENT S/OISE, FRANCE

****
*** Une nouvelle version de Studio Son est disponible (v 1.78.9) :

+ On peut enfin changer le nombre de pistes virtuelles (jusqu'ï¿½ 1024 !!).
Pour le moment, le Falcon ne peut avoir que 8 pistes reelles simultanï¿½e, mais
avec l'arrivï¿½e de nouvelles machine, comme le Phenix ((c) CENTEK), nous allons
pouvoir facilement en augmenter le nombre. Et ï¿½ ce niveau lï¿½, avec 1024 pistes
virtuelles, Studio Son est prï¿½s.
+ Les interfaces SPDIF/ADAT de Soundpool sont maintenant correctement gï¿½rï¿½es.

+ Le problï¿½me d'import des fichiers Wave a ï¿½tï¿½ dï¿½finitivement corrigï¿½ (si les

docs de Micro$oft sont correctes...).
+ Avec quelques Falcon, il etait impossible d'avoir un son correcte avec
l'effet nul ï¿½ 44.1, 48 et 49 KHz. C'est corrigï¿½.
+ Ajout de nouvelles toolbar. Maintenant, une toolbar est dï¿½diï¿½e ï¿½ chaque
outil (pour le moment, il y en a une pour la TImeline et une pour l'ï¿½diteur).
Malheureusement, par manque de temps, on n'a pu implï¿½menter la plus importante :

la Toolbar gï¿½nï¿½ral. Ses boutons se trouve donc encore sur la toolbar de
l'ï¿½diteur 2 pistes.

- La documentation de Studio Son n'est malheureusement pas encore mise ï¿½
jour, concernant pour les nouveaux outils, et notament sur la Timeline. Mais
nous travaillons actuellement dessus et nous estimons qu'elle sera prï¿½te d'ici 3

semaine (pour la version Fanï¿½aise). Pour la version anglaise, il faudra rajouter

le temps de la traduction...

Depuis janvier, peu de nouvelles fonctions ont rï¿½ellement vu le jours dans
Studio Son. Mais cette version intï¿½gre quelques corrections essentielles.
Plusieurs "gros" outils sont actuellement encore en phase de dï¿½veloppement, et
ne sont donc pas encore disponible (par exemple le nouveau chutier, les plugins
DSP, les outils de la Timeline...)

Bien entendu, Studio Son est disponible sur notre site :
http://www.emi.u-bordeaux.fr/~ricard/

Mailing list :

Pour recevoir automatiquement toutes informations ou mise ï¿½ jours de Studio
Son par mail, il suffit de m'envoyer un mail et d'y indiquer ce que vous dï¿½sirez

:
- Studio Son News (Juste les infos)
- Studio Son V2 (French) : environ 600 Ko

- Studio Son V2 (English) : environ 600 Ko

4111. Atari ST Collection For Sale

Newsgroup: comp.sys.atari.st
Date: 1998-02-28 00:00:00 UTC
From: dpfonts <dpfonts@concentric.net>
Message-ID: <34F840FC.6F96@concentric.net>
Source record: 106665

I have a very large collection of Atari ST hardware and software for
sale.

The collection is to large to inventory, but as far as software is
concerned, if it was made for the Atari ST it is probably in this
collection. Below is a list of some of the main item of this collection.

2 - Atari 1040 ST computers
1 - Atari Megafile 30 Hard Drive
1 - SupraDrive Atari 30MB Hard Drive
1 - Atari SC1224 Color Monitor
1 - Atari SM124 Monochrome Monitor
Over 800 3 1/2" diskettes with probably over 2000 software titles, most
of
these titles include instructions (either original or photocopies)
Over 30 Books, (either original or photocopies)
Assorted Cables, wires, power supplies
Other miscellaneous items

I am looking for best offer for the lot. I live on Long Island, New York
and would prefer someone who could pick up the collection instead of
shipping. This collection fills about 8 large boxes.

Please email responses to dpfonts@concentric.net. I do not read this
newsgroup.

Dennis

Nope, it was distributor by ST Informer publisher (A & D). The later version
was suppose to run on all machines.

I have a selection of Atari ST titles for sale.

This List Updated 28/2/1998.

email: steve@steverosie.demon.co.uk

I'm looking out for the following, possible swap, part exchange etc...
SCSI external CD-ROM drive, Atari CD ROMS, 16-bit sampler
cartridge/hardware etc...

All are on original media. I may be interested in part exchange/swap W.H.Y.

Key:
ds = double sided disks
ss = single sided disks
?d = number of disks
meg = one meg of memory or more needed
ni = no instructions
nb = no box
NSTE = Not STE compatable

Please Note The Key Codes Are Only There For Guidance, I cannot be
responsable for in accuracies.

>>>>>>>>>> All prices are in UK Pounds (sterling) <<<<<<<<<<
^^

Prices DO NOT include postage.

GAME COMPILATIONS

Hollywood Collection (5d,ni) 4

Heres a list of some old software/junk I want to clear. Will accept stupid prices.

ST software :

Ikari Warriors
Lombard RAC Rally
Dragon Spirit
Kick Off 2 + Final Whistle
STOS compiler
Starglider 2
Robocop
Original (old) STOS Game Creator boxed/manual
Fontkit plus 4
Jimmy White's snooker
ivan ironman's super off road
International 3d tennis
Gravity
Sim City
Warhead
Castle Master
Battle Chess
Their Finest hour

/Most/ issues of ST Format, some with and some without coverdisks.

If you're interested in any of the above then make a suggestion via email!

Tim

4115. Atari Falcon for sale (US)

Newsgroup: comp.sys.atari.st
Date: 1998-02-28 00:00:00 UTC
From: Miranda Collins <medusa@user1.inficad.com>
Message-ID: <6d9jki$5at$1@news.inficad.com>
Source record: 106669

Hi,

I have a Falcon030 with 4 megs of RAM, a 350meg SCSI external hard drive, and an SC1224 color monitor for sale as a package deal. Also includes original manuals, Atari monitor adaptor, VGA monitor adaptor, and various ST Format magazines with cover disks. I will be shipping it from Phoenix, Arizona.

If anyone is interested, please make me an offer.

Thank you.

Miranda Collins
medusa@inficad.com

>
>I certainly wouldn't say the A500 was useless.

1987 A500 1 floppy, absolutely useless for anything, except games.

> It was as capable as
>the 520ST at just about everything.

No! Even though I considered the 520ST fairly limited even then, I soon discovered
the flickering amiga was a useless piece of crap. If you spent more, and got
1 meg memory and a second drive it began to improve. But anything serious just
crashed, and crashed and crashed. Perhaps it wasn't that bad, but the store
sold it to me as the God of computers to relieve me of owning an Atari that
was going to become hopelessly obsolete. Same store that sold me the ST no less.

> When games makers started to use
>the custom hardware of the Amiga rather than doing simple ports from
>the ST there was little chance of the ST keeping up.

Ports from the ST? THings must have been different there. I'll I saw were
terrible ports from the C64 and IBM to the Atari, taking no advantage of the
ST let alone the Amiga:-).

>F1GP, mentioned above, was, apart from a few extra colours used in
>some static pictures, identical on the ST and Amiga.
>The 520ST had
>a fractional FPS advantage over the A500.
>

Understandable on both counts.
Since 1987 however ST and Amiga Specific programs did come, which is good for

both. I return to an A3000 back in 1991 which reearned my respect. However it still choked on realtime complicated animation. Since I bought and sold my A500, I think I can be allowed to my opinion based on a very bad experience;-).

Marble Madness was very very dissapointing on the ST:-(. Perhaps we need
a STOSSER version to show how it should be done:-).

I just went to Tonys Page and started downloading his games. Hey, these are
fun and now I can't get my nieces and nephews away from them. I say hey,
why don't you wreck and second laser printer for me, or go play on your PC,
but NO, they must play these STosser games. Very good indeed:-).
Playing Diamond atm, and it is pretty interesting puzzle game.

Thanks Tony.

I paid for marble madness and was mad, I didn't pay for STosser and was
happy. What does that tell you about commercial software.

Later Brian.

Oh yeah, getting the falcon Today, FINALLY.

I just bought this system. I am overwhelmed. There is ALOT MORE SOFTWARE
in ORIGINAL BOXES than is listed here, such as NVDI, HiSOft Basic, HD DRiver
and MORE.

Ok, I have spent 6 minutes on this computer and I now know everything:-).
Briefly save me a bit of reading, so I may get into a familiar environment.
I want to exit both NEODESK and GENEVA and use the TOS desktop for a bit.
Yes, so far I like the combo, I am just not familiar with it.
I can exit NEODEsk but then I am in the Geneva Manager. I cannot highlight it
to exit.

Also how do I set the serial port to 14400? I see 9600, and 19200 but
no 14400. Some software I see only has 9600 and 19200 as well.

I also cannot get the syquest to read. It says path not found?
Anyways, after about 1 month of reading I will know everything. THERE IS JUST
SO MUCH STUFF HERE.

I now have extra Calamus's and Word Perfects and other stuff that will have
to go somewhere:-).

Has anyone used PHOTOLINE and a FALCON? What is your impression?
Also what resolution is TRUE COLOUR available in?
I went to STLOW and then tried it, seemed ok, but I couldn't get the software
to work that wants true colour. Well, heck don't answer this part, I am just
clicking away here randomly like a dumb windows user;-).

I will have MANY MANY QUESTIONS.

A) Magic 4.0 worth using? It is still in the wrapper.
B) Set up MINT with Geneva/Neo and use STing?
C) Update magic over choice B) and use it instead with STing?

Oh, yes it plays MPEGS very nicely:-).

Well, what can I say, I will let you know. BUT I AM HAPPY:-).

HARDWARE

Go ahead and set it to 19,200. Your computer will talk to the modem
at 19,200 and the modem will talk to the phone network at 14,400.
That's the way it works for me!

>I also cannot get the syquest to read. It says path not found?

You might send an email to the ExtenDOS author to see if it
supports Syquest drives.

>Anyways, after about 1 month of reading I will know everything. THERE IS JUST
>SO MUCH STUFF HERE.

Well, I'm jealous! ;-)

Just remember -- do not defragment the partition that has
STudio Photo! It screws up the copy protection and you're
only allowed to install it TWICE before you have to buy
another one. PageStream also doesn't like the defragmentation
process, either. In fact, it might be worthwhile to keep
the programs on one partition and the data on another partition!

Have a good time!

I just got the latest version. It's ok, but NeoN is suppose to be
available soon for wim (no pun intended Parx people:). Its way faster.

> Imagecopy v4.0, 3.5 & 2

How can anyone with an Atari not have this?

>
> PHASE 4 Phoenix

Fast and easy to use. You will have to learn how to work with Cad3D or
Cybersculp. I can convert DXF files for you with Dynacadd. Dosen't
render as nice as otherplatforms/TOS packages, but it does do what it
does fast. Copyprotection manual is a bitch.

> Positive Image
Only tried the Demo and it didn't like my machine. Packageing looks
impressive.

>
> Outburst v3.1 (inkjet printer accellerator)
Still supported and works great.

> Warp 9 v3.80 accellerator

Get NVDI (if you don't already have it).

There is a lot of wrong stuff here. CAB does not support PPP, in fact it's got nothing to do with PPP or SLIP. CAB works very well without MagiC, it also works with single-TOS (the original TOS in ROM) or MiNT.

So do not confuse a web browser (what CAB is) with the TCP/IP stack, which is the only thing that needs to deal with stuff like PPP. Go to my web page and download STinG which is faster and better than PPP-Connect (which comes with CAB these days) anyway, and also runs on all systems, not only with MagiC. You'd also need a CAB.OVL for STiK / STinG. You can get it from my web page too, but the latest version from the author :

What does that mean, an "IRC application for a web browser" ? An IRC
application is a network application just like a web browser is. Saying
"one for the other" is meaningless. Both are entirely independent from
each other.

> Also I haven't gotten my system completely organised yet and currently
> I'm running Neodesk and Geneva. I don't have an ISP yet and no
> experience setting up any browser for the internet. Can someone tell me

There are no IRC applications for PPP Connect. Get STinG instead, there is
FracIRC V2.0 and AtariIRC (dunno the current version number ATM) for it,
both being nice IRC applications.

Cheers Peter

>problems.

I too gave up on my Catt a long time ago. I did manage to install a
44Mhz clock in place of the 32Mhz one and all worked fine except the
SCSI. However, using a Link, no problems with the DMA port.

From: jaubrey@jaubrey.demon.co.uk
Message-ID: <888779618_OASIS_@jaubrey.demon.co.uk>
Source record: 106542

I am considering getting a Mono Monitor, I use Cab and a few other programmes with Sebra(Mono emu), and I find it hard on my eyes trying to read the small text. Is there much difference, with a Mono Monitor, will images in Cab be clearer and text more sharp? Is there another Mono Emulator out there thats better than Sebra? Will I be able to buy some sort of socket switch to flick between colour monitor and the mono one(I don't want to wear out plugs/socket)? Finally is it worth buying one, or should I save my hard earned pennies?

Thanks,

James

From: tos4ever@ping.be
Message-ID: <34f9cc448a73c0@ping.be>
Source record: 106545

Hello,

Because I've some very annoying problems on my Hades when I use
HSMODA7 (system hangs when loading ha_escc.prg) I tried to load all
the HSMODA driver from *mint.cnf*
This seems to work, at least the system boots up, but I can't make a
connection.
BTW: I'm using the *modem2* port.
All my other com.prg's like Connect 95, Starcall, Rufus works just
great.

This is what I get in the logfile:

Mar 1 21:39:48 tos4ever pppd[26]: pppd 2.2.0 started by root, uid 0
<27>Mar 1 21:39:48 pppd[26]: Couldn't get device fd flags: invalid function number
<30>Mar 1 21:39:48 pppd[26]: Exit.

When I use *pppd 2.1.2* I get this:

Mar 1 21:19:54 tos4ever pppd[25]: pppd 2.1.2 started by root, uid 0
Mar 1 21:19:54 tos4ever pppd[26]: tcgetattr: invalid function number <150>
Mar 1 21:19:54 pppd[26]: Exit.

My *mint.cnf* looks like this:

```
CON=u:\dev\console
PRN=u:\dev\centr
cd u:\
setenv UNIXMODE /brUs
setenv TEMP /tmp
setenv PATH .,\bin,\usr\bin,\usr\local\bin,\usr\etc,\usr\ucb

Hi
Could someone email BINARY files of the two EPROMs need for TOS2.06 in an STE. I have the STFM ones but now I have an STE.

I have two 28 pin EPROMS under the diskdrive. They sit in 32 pin sockets.

I will also need to know which tracks to cut to get the power to the correct pins. I DO NOT want to be able to switch back to TOS1.4

Thanx

Brian

4146. Cab ov; 1.2805 vs NEWsie

Newsgroup: comp.sys.atari.st
Date: 1998-03-01 00:00:00 UTC
From: madmax@bfree.on.ca
Message-ID: <6dcm7efum1@newsbell.bellglobal.com>
Source record: 106550

Well ever since installing 1.2805 I cannot sustain any connections in CAB.
Getting any web page ends up in a software error many many times and downloading
a file is IMPOSSIBLE. I never had these problems to this extent with any
1.270*. Quite frankly it is unusable for me. If I can find where I
put 1.2705 I should be operational again. I at first thought it was because
the sites were busy, but this has been pretty much 3 weeks of testing and
total failure. Anyone else have this experience? I wanted the new features
but I will be happier just getting full web pages again without the software
disconnect error.

So, I tried NEWsie browser and sure enough, rock solid fast downloading
huge files from same site.
I was getting M_Player and supporting FLMs:-).

Went back to CAB immediately and sure enough, it continues to not finish
receiving pages or downloads. I am under 300ms when pinging the sites.

Cab is working fast to, it is disconnecting while maintaining high transfer
rate.
I am a little frustrated by this since it was working so well before.

Anyways, I haven't installed the latest NEWsie yet, but it sure is solid
for downloading.

Finally, thanks to both Dan and John for giving me the ability to even come
on the internet:-).

Any Ideas?

later
Brian.

Hmm, I remember someone else mentioning a similar problem. I can only suggest
to log such a session into a file, then send me the file. If I can reproduce
the problem by REPLAYing the file, the bug is half fixed ;-)

That's right basically. The need for HSMODEM depends on the TOS version
that's in use. TOS versions prior to V2.0 will *require* HSMODEM. With
V2.0 or later HSMODEM is still recommended, but not essential anymore.

> It is only if your ST has a port fault and many I have seen do have this
> fault that Atari never seemed to get rid of. Also HSMODEM gives you higher
> transfere rates because it re-writes the Atari's built in procedures for
> this.

This hasn't got to do with hardware port faults. HSMODEM replaces TOS' buggy
routines, that's right. On older TOSs it also adds some OS extensions that
are built in in later TOS versions.

4153. Keyboard problems

Newsgroup: comp.sys.atari.st
Date: 1998-03-01 00:00:00 UTC
From: tom.derrick@acpu.com
Message-ID: <888802147@acpu.com>
Source record: 106557

Hi, everybody. A week or two ago somebody asked about a keyboard fault, and I mentioned that I had read something that might bear on his problem. He emailed and asked, but I couldn't find what I was looking for. Well, I found it while trying to solve a totally different problem. It was not, as I had thought, something from the CodeHeads, but from Mark Slagell in the SilkMouse dox. Here is a clip from Silkmouse.asc:

"All Atari computers manufactured to date (at least, the ones I've used) have a problem in the keyboard. It happens when a shift key is held down and two other adjacent keys are pressed at about the same time. The keyboard will in that case sometimes erroneously report a shift-F1 or shift-F3, in addition to one or both of the keys actually pressed. If you've never noticed, it's because you are an exceptionally careful typist, or because none of your programs does anything interesting when you press shift-F1 or shift-F3 anyway. But it is a problem for a number of people. The keyguard feature effectively cures the glitch.
This feature must be turned on with the SMC utility in order to work; it is off by default because of possible conflicts with key-macro utilities. Such conflicts can also often be resolved by changing the order in which your AUTO programs run."

I don't know whether this helps that individual (or anybody else) or not. I posted it here because I forgot who it was.

4155. How to get SCSI Zip running w/BigDos on Mega ST2???

Newsgroup: comp.sys.atari.st
Date: 1998-03-01 00:00:00 UTC
From: Charlie Wood <spidersi@sprint.ca>
Message-ID: <888824456.37680@michelob>
Source record: 106559

I have a mega st2 and ICD's FA*ST acsi to scsi box with
an 85Mb scsi drive inside.
I also have a scsi zip drive that I would like to use to transfer
files that I download with my PC onto the Atari.

I've read on this newsgroup about BigDOS and HDDriver being used to do this
but haven't a clue how to do this.

Could anyone be kind enough to send me instructions on how to set up
BigDOS and HDDriver to see my zip drive.

I should mention the TOS on the Atari is 1.02(1.2) <-- Will I need to
upgrade this??

Also the scsi ID on the ICD box is set to 0 will I need to change this when
I add an external device?? My zip is scsi ID 5 with termination on.

Thanks in advance.

Yes. I got mine from Best Electronics at one of the Atari Shows for
about 20 UKP, you can probably get one from System Solutions.

> Finally is it worth
>buying one, or should I save my hard earned pennies?

Yup, very much so. Medium res is at best a compromise and an
increasing amount of software needs high res or better to be useable.
Emulators are OK for short spells but for prolonged working you can't
beat the real thing. I picked up my spare mono for about 15 UKP second
hand, which is next to nothing really.

Message-ID: <888711268.41C6@cyberspc.mb.ca>
Source record: 106598

GIANT ATARI ST HARDWARE / SOFTWARE / MAGAZINE / BOOK BLOWOUT!

The Winnipeg ST User's Group (STUG) is having a huge fundraiser to help keep our still-going-strong user group in good health, clear out some useful software that isn't getting much use, and help members do the same. The majority of the proceeds from all sales will go directly towards helping the club which has been promoting Atari since 1986 in Manitoba, Canada.

Please look through our list and pick out something you can provide a good home to. All hardware/software is fully guarenteed for 2 weeks from receipt. Everything comes with full email tech support from a knowledgable STUG member, we'll try our best to help you out!

If you want a whole bunch of stuff, discounts are available. Let us know what you think is a fair price. We just want good homes for all this STuff!

Every item purchased includes an issue of Atari User magazine FREE! Please specify which issues you want or random.

All prices are in US$ funds as most sales tend to be to the US and so it makes everything easier that way. Canadian prices should be calculated accordingly.

Shipping is extra and NOT included in the price listed.

Thanks for helping out our user group!

Trevor Cordes - STUG President

MISC
==========

CD-Recordable service - unrelated to STUG, it is my own company, but
worth mentioning here. STUG recently moved its nearly 1000 library
PD floppies to CD-ROM - never again worried with faulty floppies!

We can move your data or audio to compact discs and CD-ROMs! Over 800
Atari floppies per CD-ROM!

Pricing from $6 to $50 per disc depending on the data and how it is
delivered to me (ie hard drive or syquest is cheaper than floppies).
Email for more info.

==========
WANTED
==========

OmniSwitch or ToadSwitch multisync monitor adapter for regular ST's.
Email your price.

4159. FS: SyQuest 88 MB SCSI removable hard disk system + carts REDUCED

Newsgroup: comp.sys.atari.st
Date: 1998-03-01 00:00:00 UTC
From: Trevor Cordes <trevor@cyberspc.mb.ca>
Message-ID: <888711656.41C6@cyberspc.mb.ca>
Source record: 106599
Cross-posted to: comp.sys.atari.st,misc.forsale.computers.other,misc.forsale.computers.mac-specific.misc

SyQuest 88 megabyte removable hard disk system with 6 (or 7) cartridges.
Drive is in perfect condition and all carts have NO bad sectors and are
in perfect condition too. Rarely used - only used for monthly backups.
This drive can also read 44 MB cartridges. This drive is SCSI.

Comes with 14 day guarentee to be free from defects.

Bare drive with 6 carts for only $299.

Bare drive with 1 cart for only $99.

Carts separately only $39/each.

Possibly available is an external case made just for this drive.
Most likely $20 _with_ purchase of the above drive.

>The one I've been using was 3.32 and to my belief that was the last update.

The latest version I'm aware of (v 3.32R1) does work on an TT, even
with N.AES/MiNT. Furthermore it seems to work on the Hades too so I
can't see any reason why it shouldn't work on a Falcon.
The 3.32 Rev.1 can be found on the net somewhere.
Anyway this is what the *file_id.diz* says about it

UIS_III v3.32 Rev 1 (URAn 95.10.10)
Improved with XBRA protocol for all vectors.
Fully compatible with:
TOS 1.04, 2.06, 3.06, MTOS, MagiC, Geneva.
(Tested with all of the above)
Revision is freeware contribution, origional copyright
remains unchange.

4161. Atari ST Game

Newsgroup: comp.sys.atari.st
Date: 1998-03-01 00:00:00 UTC
From: David & Kim Greth <greth@ecu.campus.mci.net>
Message-ID: <6datntkmn1@news.campus.mci.net>
Source record: 106601

Am also looking for a title on an old Atari ST game. Conquer the world type game. Russia was red, US blue, France Green, Germany Grey, Japan Yellow, Britian Purple. World divided into territories that you had to conquer. As you conquered an area it took on your color. Any ideas out there? Played it on an Atari ST at Ft. Devens back in 89-90. Was just fun to play. Any help would be appreciated.

Please send replies to greth@ecu.campus.mci.net

thanks.

Dave

Using Newsie in Offline mode, I find that when I read and delete articles, about 1 in 10 aren't actually deleted from disk, although they are correctly removed from the XOVER file. There doesn't seem to be any particular pattern as to which files are deleted and which left. Has anyone else come across this?

4164. the 9th Adventurer`s Convention

Newsgroup: comp.sys.atari.st
Date: 1998-03-01 00:00:00 UTC
From: Larry Horsfield <Alaric@larryhorsfield.demon.co.uk>
Message-ID: <xc6N+hAO8R+0EwO0@larryhorsfield.demon.co.uk>
Source record: 106604

Hello there all in C.S.A.St.

There must be people in this NG who still play adventure games, be they text and/or graphic, on their Atari`s or on PC`s under emulation. If so you may be interested to hear about the 1998 Adventurers Convention, which is being held in Birmingham this coming October, as it has been for the past 8 years.

The Convention is being held on Saturday, 24th October 1998, in the Ariel Suite of the Royal Angus Thistle Hotel, St. Chad`s, Birmingham B4, which at the end of the A38M and easy to get to from all parts of the country. It runs from 9am to around 6pm and covers all formats from Spectrums to PC`s, including Atari`s. Tables are available if you wish to bring along your own computer(s) and we actively encourage this as we depend on those attending to bring their computers, so the more the merrier! If you wish to bring hardware and/or software to sell you are more than welcome to, but no pirated software please!

The event attracts adventure enthusiasts from all over the UK, including Northern Ireland, and the atmosphere is very friendly and informal. Many of us stay overnight at the hotel and the evenings can be just as lively and interesting as the convention itself!

During the day we have the popular "Megapoints" competition running. In this the contestants get 20 minutes playing time at a specially written Spectrum text adventure, with the object of scoring as many points as possible in the alloted time. There are usually cash prizes and special certificates for the 3 highest scores. The adventure this year is being written by Ulsterman Jon Scott, author of various Spectrum text adventures published by Zenobi Software.

Tickets are available now and cost 6 ukp per person if you buy yours before 30th June, 1998. Thereafter, or if you pay on the door on the day, the price will be 7 ukp per person. Tickets may be purchased from:

Vicky Jackson, 128 Merton Hall Road, Wimbledon, London, SW19 3PZ

Please make cheques/PO`s payable to V. Jackson

* * * * * * * *

HOTEL ACCOMMODATION:

The Royal Angus Thistle Hotel has special room rates for those attending the Convention. These include full English breakfast and are as follows:

Single Room: 37.50 ukp per night.

Double/Twin: 32.50 per person, per night.

Please contact the hotel to book your accommodation, NOT the convention organisers. The address and phone number are:

Royal Angus Thistle Hotel, St.Chad`s, Queensway, Birmingham, B4 6HY

Telephone: 0121-236-4211

Don`t forget to inform the hotel you are attending the Adventurers Convention, otherwise you will be charged the normal room rates!

NOTE: The Convention is on the weekend before the start of the Birmingham Motor Show at the NEC. Whilst the hotel have promised to reserve a number of rooms for us, you are strongly advised to book your accommodation AS EARLY AS POSSIBLE to avoid disappointment.

If you have any queries about the Convention, or would like to reserve tables for your hard/software, please contact me at the email address below.

Hope to see you in Brum in October!

Larry Horsfield

>is enough.

Like Peter says, CAB doesn't need a pre-emptive multitasking
system to work. It works fine under plain TOS (without some tools) or
on a co-operative multitasking system like Geneva.

However if you want to use *Iconnect* AKA PPP-Connect instead
of *STing* or *mintnet* you do need a pre-emptive multitasking system
like N.AES, Geneva/MiNT or MagiC.

I only hope that someday ASH doesn't decide to make CAB an
only_with_MagiC application.

FS: Hand Held Scanner Accessory
Find it difficult scanning straight and keeping the document in place
when using a hand scanner? Then you need, Scanner and Mouse Pad with
'keep scanner straight' thingimajig.

The scanner pad (doubles up as mouse mat) is a large (more than easily

accomodates A4 size paper) pad which had a clear plastic sheet
attached under which yu place your document. Place the straight 'rule'
on top to hold down the document and to guide the scanner in a
straight line.

Want one? Well, I only have one - so contact me ASAP to reserve it.

Yes, there is Linux on CD for Atari. In fact, it's on 2 CD's: one is
from Walnut Creek (in the USA) and one is on the Atari Compendium CD
from Toad Computers.

Yes that 3.32 runs fine on a Falcon in any resolution I've ever tried. It also
runs just fine under MagiC 5.11 if you put it in the /start/ folder.
The reason _I_ like UIS III is that you can view _any_ file from within the
file selector. This is something win95 will never be able to do. HAHAHA! :-)

I'm not familiar with Studio Photo, it seems like a dumb Mac installation (2 installs? how about with the dongle? 3 installs then?)

> PageStream also doesn't like the defragmentation process, either. In fact,
> it might be worthwhile to keep the programs on one partition and the data on

You can defrag, copy, delete, move and otherwise screw with Pagestream all day long, as long as your current copy is configured with valid paths to the fonts, printer drivers, etc. You can put those folders anywhere! Defragging has nothing to do with it.

True. The models of mine that were put on the 'net were fairly early
ones. I like to think I improved a bit after those.
http://www.rjelwell.demon.co.uk/html/pics.html

>crashed, and crashed and crashed. Perhaps it wasn't that bad, but the store
>sold it to me as the God of computers to relieve me of owning an Atari that
>was going to become hopelessly obsolete. Same store that sold me the ST no less.

I have been ST owner since 1986, and am writing this on a Falcon, but
I freely admit that the Amiga was the more capable machine, notice I
didn't say the better machine. Both machines had there strengths.
The ST, due to the built in midi ports, became the musicians machine
and the relatively simple archiecture meant programming wasn't too
difficult.
The Amiga was more capable graphically. The multi-tasking OS was
there from the start, and very powerful it was too, so most software
was compatible. Future upgrades didn't cause the incompatibilities.

The STE took steps to bridge the gap to the A500 but it was rather
late and just caused fragmentation of the ST market.
Hardware wise the Falcon was better than the A1200 but was too
expensive and too late.
Friends of mine owned STs and Amigas so I do have a reasonable
experience of both.

The half meg upgrade was one hell of a lot simpler than the ST to the extent that for developers 1Meg became the standard minimum system. Whereas the ST minimum was still 0.5Meg. The reason F1GP was released later for the ST than for the Amiga, despite being coded on the ST, was to hack together a version that would work in just 0.5Meg.

>> When games makers started to use
>>the custom hardware of the Amiga rather than doing simple ports from
>>the ST there was little chance of the ST keeping up.
>
>Ports from the ST? Things must have been different there. I'll I saw were
>terrible ports from the C64 and IBM to the Atari, taking no advantage of the
>ST let alone the Amiga:-).

What I meant was that to start with games were coded for the ST and then the code was tweaked to work on the Amiga. As far as most people were concerned the systems were the same.
Later as developers wanted to push things further they started to take advantages of the Amiga's many extra abilities. So it got to the stage where developers would write games for the Amiga and the publishers would ask if the game could be converted to the ST quickly. If not they wouldn't bother.

>Since 1987 however ST and Amiga Specific programs did come, which is good for
>both. I return to an A3000 back in 1991 which reearned my respect. However it

>A500, I think I can be allowed to my opinion based on a very bad experience;-).

I would be interested to know what kind of realtime animation you mean. I am not trying to prove you wrong or anything I am just curious.

Rich.

>

If your docs with the printer list the ASCII codes, or if you can get
the ASCII codes from Okidata, you can create your own First Word driver
-- it's what I did with my HP Deskjet 540. You simply open up an
existing Hex driver in Word, do a save as, and then change each line as
needed. Then you run the convert program to create the actual driver,
and move it to the top 1st Word directory and rename it.

Re. Mike's mega clearout - ongoing saga!

*** MORE BITS FOR SALE - UK ONLY, SORRY :-(***

I'm still finding lots of very useable and useful surplus bits and bobs in the darker recesses of my computer room!

Sensible offers are invited for all or any of the following:

HARDWARE

Naksha hand scanner for ST AND FALCON (just run in 16 colours). Comes complete with power supply, interface, manual and special version (v1.80) of Touch Up software (sorry, never received the manual for this, but can advise on how to use - very easy!).

Quickshot amplified stereo speakers suitable for Falcon or STe or any Walkman type set-up.

Falcon UK keyboard plus plastic top and internal shielding in excellent condition.

External double density floppy drive with power supply and connecting cable for use with ST/e.

Mega ST separate keyboard which can be plugged into any ST using connector supplied. There's a couple of sticky keys, but I think this can be sorted!

Box of 'bits' useful for spares including floppy drives, DMA cables, connectors, and even a Pace 2,400 modem which could be a nice project box! The cables alone are worth a few quid!

Forget Me Clock II and software.

SOFTWARE

All are complete with proper disks and official manuals!

EdHak - editor for text or binary files etc etc

Personal Finance Manager - version 1

Screenblaster II (for Falcon)

Diamond Back II

UIS III file selector

Ishar 2

Speedo 4.2

Speedo 5

Easy Text Professional - vector version which uses Speedo fonts.

BOOKS

Falcon manual (spare copy)

ANYTHING ELSE?

Yep, but I haven't got round to matching manuals up with disks etc!

*** INTERESTED? ***

In an ideal world someone would like to buy the lot off me for 150 quid. The speakers, scanner, Falcon keyboard, other hardware and cables etc are worth this at least, even today! Add the software, and whatever else I can find and it's a bargain!

However, I'm happy to take sensible offers on anything. I just need the room quickly!

DELIVERY

I can deliver the whole caboodle to anywhere within 100 miles of Sheffield for the cost of the petrol, or it can be picked up from Sheffield.

Single items can be sent by normal post or by Parcelforce at cost, or can be collected in person. Free cup of tea given as well!

-> > PC-Ditto (8086 emulator to run DOS 3.3)
-> Well.......

Well.....yeah right.

If you really want to impress your friends do what I did if you can.
Find Falconspeed. It's a 80286 hardware emulator. I'm running DOS 7.0
with Windows 3.1, Neodesk/Geneva, TOS 4.04, LINUX, and Magic if I want
to.

I installed Nemesis and a second internal IDE hard drive as well as this
gargantuan Coyote 1.4 gig SCSI hard drive. I expect to get at least 5
more of those (maybe).

I'm still in the process of completely overhauling my file structure.

Get CAB for the internet also.

After what I've already done I'm suprised that this thing didn't explode
into a flaming fireball yet.

Later,

James

Optical mice are a disability in themselves. I'd recommend a rethink :)

4191. FS [UK]: ST and Falcon CDs

Newsgroup: comp.sys.atari.st
Date: 1998-03-01 00:00:00 UTC
From: denesh@cyberstrider.org
Message-ID: <34f9abdc.5234011@news.demon.co.uk>
Source record: 106631

FS: ST and Falcon CDs
I have the following for sale. Prices in UKP as indicated.

Power-Pack Disks 1 - 11 of NCS (Northern CD-ROM Series Germany) for
TOS Systems:
Disk 1 - Raytrace
Disk 2 - DTP
Disk 3 - Graphics
Disk 4 - Music
Disk 5 - Online
Disk 6 - Business
Disk 7 - Text
Disk 8 - Falcon Demo Scene
Disk 9 - ST Demo Scene
Disk 10 - Colour Games
Disk 11 - Mono Games

I'd like to sell the above as one whole lot, so am looking at 77 UKP
including postage - 7 UKP each - they were around 20 pounds each when
first released a couple of years ago.

Make me an offer I can't refuse. :)

I also have:
All Things Falcon CD, 12 UKP including postage - never used! Or make
me an offer.

Regards
Danny

I have a selection of Atari ST titles for sale.

This List Updated 1/3/1998.

email: steve@steverosie.demon.co.uk

I'm looking out for the following, possible swap, part exchange etc...
SCSI external CD-ROM drive, Atari CD ROMS, 16-bit sampler
cartridge/hardware etc...

All are on original media. I may be interested in part exchange/swap W.H.Y.

Key:
ds = double sided disks
ss = single sided disks
?d = number of disks
meg = one meg of memory or more needed
ni = no instructions
nb = no box
NSTE = Not STE compatable

Please Note The Key Codes Are Only There For Guidance, I cannot be
responsable for in accuracies.

>>>>>>>>>> All prices are in UK Pounds (sterling) <<<<<<<<<<
^^^

Prices DO NOT include postage.

GAME COMPILATIONS

Hollywood Collection (5d,ni) 4

I am in need of the software that went with the ST Handy Scanner by
Datel Electronics. I have the scanner minus psu and software, and
obviously want to check it out.

Any help would be appreciated.

Thanks

Cheers! for now

I have an Epson Stylus 400, and it prints from Atari Works, so it is
possible to find drivers that run with it. I need a driver for my
printer to print from Cubase, though, so if anyone has one, please
let me know! :)

I once had Falcon Speed. Like an idot, I had a 486 too and figured it
was worth trading Falconspeed for some software that was hard to get in the
U.S.:(.
Now, inretrospect, I wish I still had it (I have been looking for one
second hand). I would be interested in the new parallel video capture
devices for PC's. One (forget the brand) does indeed work under Doez
3.1.

(No comments on the Falcon parallel port being incompatible, please,I
know otherwise:).

Maybe you could put one of those on your list and let us know if it
works:).

Colonial conquest you mean. Nive game, but the one playing for
Russia wins (if he is not too stupid).

>
> Thanks.

I have the same printer to my PC
but have not found any driver for the Atari.
I dont think there is any as this printer is a "Windows printer"
and it needs a driver that can read and write to the printer.
Atari only supports writing to the printer.

I got my printer in a PC-store and they told me that it should work
on all computers.
Thats a lie. (They meant all PC-Computers)

Boy am I in for some learning? I thought you just formatted it with some software and then placed programs on it like normal? I have Extendos on the HD, but, I don't think it is installed atm. I will read about this. From the icons left by the previous user, there was the syquest, a jazz drive and a cdrom all connected so I am certain it all will work.

>Well, I'm jealous! ;-)

Yes, I feel so much better now. I first got on this newsgroup and read about the Guy from Kitchener Canada, about 30 minutes from me, who bought a TT for $27 Cdn ($14US:-) and I was jealous. Not so anymore.

>
>Just remember -- do not defragment the partition that has

>another one.

WHOA!!! THIS IS NONSENSE! Are you certain. What if I have TWO hard drive crashes. Anyways, this is on the drive and I don't know what it does:-). More reading. The boxes of software are really heavy and manuals are buried. I checked to make sure all were there and have put them in a box. I am currently reading the NEODESK, GENEVA and FALCON MANUALS:-).

I was going to format everything and reinstall the software so that I get a feel for what is happening. Usually I do this often so I can remember the procedures. Boy could this have been a mistake.

> PageStream also doesn't like the defragmentation
>process, either. In fact, it might be worthwhile to keep
>the programs on one partition and the data on another partition!

Thanks for the advice. I think this is silly as I defragment my SH204 on a weekly basis because of being on this NG:-). Its always about 70% fragmented after only a week of internet use.

Well, I am using Calamus SL on it. It is slow on the Falcon. And in Geneva Neodisk combination there is lots of screen fragmentation. I used it on the TOS desktop and it performed much better. I am interested in Pagestream

because I never had it and it always seemed easier to use, but once you learn Calamus, there is no other:-). SL looks similar which is fine for me.
>
>Have a good time!

I really am:-). However each comparison shows me how good my ST really is. Also being a real loser, I have put the Falcon in ST high. I don't like coloured icons and desktops, yet. I also like showing the desktop as text. And I prefer clicking on a readme file without all sorts of different colours appearing. Sometimes the combination is unreadable.

Anyways, once I set it up how I like it I will start showing it off to me friends/enemies:-).

Thanks for the help George.
Can't wait to get online with it.

You can buy these software or look for used software. Systems for Tommorrow
or B&C computervision would be a start. They have URLs which I can nver
remember.
Also there are many adds here selling the above regularly.
Check out for Eva Crouse posts, and others.
>>
>
>Signum, Harlekin, Script and Neodesk are all commercial, so you'd have to
>buy them even if you want to use them on the emulator.

Yes.
>

>As for PD software, check out the FTP sites.
>

Such as FTP://archive.atari.umich.edu.
I may have reversed archive.atari, I can never remember now.
Big help eh:-).

>Install HS Modem and STiNG. You can go up to 230.4K DTE

What is DTE? I simply want to use a 56K modem.

>>
>
>Read HD Driver docs;).

Ok, at least I know where to look. I hope I can figure out which programs he
used for each drive. I have a feeling he used ICD on the IDE and HD on the
Syquest. Both are on the IDE drive.
>
>>Has anyone used PHOTOLINE and a FALCON? What is your impression?
>
>Fantastic app, but I am using a Falcon with Afterburner and NOVA
>installed. Your milage may vary. Get a Nemesis first.

Ah ha! I will get the demo first. I tried it on the STe and found it nearly
unusable. But it looks neat which is why I wanted a falcon.

>
>>Also what resolution is TRUE COLOUR available in?
>
>640*400 interlaced (SC1224) 640*240(VGA) Get Nemesis and Videlity for
>640*480 TC.

OK, so I can get 640*200 on the Multi Sync. If a game requires RGB can I use
the Multi Sync for this or do I need to use the SC1224. Its not a problem since
I have about 6 of these monitors. I just need to get the adapter. If it is
not necessary I will stick with one monitor.
>
>

>N.AES.

Ok, I will look into updating it. Boy updates could cost me a fortune:-).
I think mint is cool. Now what is N.AES, hate to sound very ignorant.
I have read discussions on different versions, but I don't know what it does.
Also is Freemint and Mint the same thing.

>>Oh, yes it plays MPEGS very nicely:-).
>A Pam Anderson fan;')

Never heard of her:-) Why else buy a falcon. Plays not that much faster
than ST. I have tried it in various resolutions. I even tried it in STlow
and it produced more colour than my STe? Why is this? I thought it would
show the same 16colours?
>
>You can't just read about a Falcon. You have to use one for a while.
>If you went from an (M)ST/E, it is pretty impressive.

Your not kidding here. It is impressive. However it is not a rocket stock. BUt
it sure seems to be able to do everything. Can I use Autobooting disks with
a falcon?

>>
>>HARDWARE
>
>Dump the 80mb hard disk and go for a newer model. The Conner is TOOOOO
>slow.

Hmm, this could be it, however, it flys over my SH204:-). And if you have
ever seen TOS 1.0 use a hd without a cache, it sure is painful.
>
>14.4 ok for mail and news. Forget the Web with graphics on.

Thats what I was afraid of. I have the 28800 on my ST atm, however it will
remain in use here. I will get another modem and start a BBS with the 14400
with one of my other 520STs.

>> GFA BASIC v3.5
>Get Face Value

Surprise, it came and wasn't listed either. I was happily surprised.
No STOS though TONY:-).
>
>
>> Apex Media

>does fast. Copyprotection manual is a bitch.

This is not a problem as I already own the complete cyber series and tried
them on the falcon. Cad3D must use an illegal command for spin and extrude.
However cybersculpt appears to work fine. Yes, I must find DynaCadd.
I know you bought yours used, but do you know if it can still be purchased.
I like well programmed software.

>> Positive Image
>Only tried the Demo and it didn't like my machine. Packageing looks
>impressive.

Hmm, anyone else have problems with modified falcons.
Very pretty box.

>> Outburst v3.1 (inkjet printer accellerator)
>Still supported and works great.

I need a printer for this machine. I want the BEST output possible.
I was recommended to purchase a HP.

>> Warp 9 v3.80 accellerator
>Get NVDI (if you don't already have it).

Yes, there is a version here, still in original wrapper to. It says the
latest version. But I can't remember atm. Will it work with SPEEDO, or do
I dump Speedo Gdos? I have ALOT OF STUFF for speedo so I don't want to
switch.

>> ICD SCSI Pro (utilities & cleanup)
>Keep for future (hopefully) upgrade

Good to know they are still active too.

>
>> EXTENDOS Pro v2.40a (CDROM driver)
>
>Must have

Umm, I guess I better get a CDROM eh?

>
>>
>> GT LOOK II (Epson Scanner driver for SCSI)
>Very good software, and expensive too. What version do you have?

I will get back to you on this. From what I have seen most software is from
1992 through 1996 at which point he drop atari soon after they dissapeared.

>
>> PC-Ditto (8086 emulator to run DOS 3.3)
>Well.......
>

OH YEAH, thems fighting words:-).

I am looking at all the original receipts, and I'll I can say is that he
made TOAD computers rich;-). He even registered ALL his SHAREWARE.
We lost a very special user here, who somehow managed to purchase alot
of very expensive software. I have alot of original software, and I mean alot
but this addition is certainly better quality.

Thanks.

>http://www.rjelwell.demon.co.uk/html/pics.html

I have been meaning to your website, since I caught you posting recently and
figured you were one in the same. Thats along time to be in the ST scene.
I took a five year break.

>>
>>1987 A500 1 floppy, absolutely useless for anything, except games.
>In 1987 the 520STFM still had a single sided floppy disk.

Yes, that was a problem too. Fools for that one. I had the ST with 314DS
drive.

>I have been ST owner since 1986, and am writing this on a Falcon, but

Boy we have alot in common. I just got a falcon:-).

>I freely admit that the Amiga was the more capable machine, notice I
>didn't say the better machine.

Good choice of words. That is what made it an Amiga. All the built in features.

No file selector:-). Everyone wrote a new one with each app. YUCK.

> Both machines had there strengths.
>The ST, due to the built in midi ports, became the musicians machine
>and the relatively simple archiecture meant programming wasn't too
>difficult.

Blessings I never took advantage of.

>The Amiga was more capable graphically. The multi-tasking OS was
>there from the start, and very powerful it was too, so most software
>was compatible. Future upgrades didn't cause the incompatibilities.

Yes, better pictures. And you are correct, ALOT of ST software broke with
each upgrade. There were problems going from kickstart 1.2 to 1.3. However
they were fewer. Many ST problems were with games. Proper applications generally
were solid. Unfortuneately my favour Cyber software didn't make the grade.
Try multi tasking on a 512K single floppy Amiga, it just didn't work then.
With the proper hardware, it was competent. But really, you would be swapping
disks, like workbench and whatever rediculously. And it would become confused
and have guru errors. However many applications software simply broke using
a single task or just trying to print. IT WAS AWFUL and I cannot forget it;-).

Well, thankfully I forget most of it, like anything else 11 years ago:-).

As things progress, they were very stable, and progress in OS caused few problems.
The way an A3000 worked is how the 1987 machine should have worked. But it
was to much to ask from such little hardware. Example. I can get on the internet
with CAB and my 520ST with 1meg of ram and TOS 1.0 and a floppy. Slow but
works. This could not be done with an A500 with 1meg from the same era.

>
>The STE took steps to bridge the gap to the A500 but it was rather
>late and just caused fragmentation of the ST market.

Possibly true. There was no ST market in North America, EVER. It was small
very small, and simply is infinitisimal now.

>Hardware wise the Falcon was better than the A1200 but was too
>expensive and too late.

Tut tut, lets not get into the 1990s on me:-).
A1200, really another bad move like Atari might make.
You skipped the 2000, 2500, 3000, and A600.
2000, working version of an A500. Very Expensive at the time. Easily expandable.
Had a few of these with TOASTERS.
2500, well somewhat dissapointing.
A3000, Nice machine, what I was looking for in 1987. Everything works as
advertised.
A4000, more of the same, better everything, even if slower than 2000 with
040 accelarators.

1200,600 yawn. Yeah, maybe falcon like. I am testing now:-).

>Friends of mine owned STs and Amigas so I do have a reasonable
>experience of both.

I can see this. However if you don't own one, you can't suffer.
I was shown fancy demos and stuff, but when it came to trying to get anything
done like use a wordprocessor, it was not a pleasant experience. Running
a BBS back then on an Amiga was also an unpleasant experience.
The bells and whistles fade quickly. I had collected over 1300games between
mid 1987 and 1988 and this was all that worked.
It had all the tools, but really, using one and demoing one are different.
It is very irrellevant now.

>
>The half meg upgrade was one hell of a lot simpler than the ST to the
>extent that for developers 1Meg became the standard minimum system.
>Whereas the ST minimum was still 0.5Meg. The reason F1GP was
>released later for the ST than for the Amiga, despite being coded on
>the ST, was to hack together a version that would work in just
>0.5Meg.

This is correct, and all you had to do was pay more money for a superior machine,
and then put more money into to use it. Two floppys were minimun to do work

with and 1 meg was also needed. No you buy Pro Page (there was no pagestream)
and go BLIND inbetween guru meditiation errors. Then you buy a flicker fixer
and put it over the monitor so your suffering deteriorates. Then your 1084
monitor pops every 10minutes and you are told they all do this. Sure enough,
they all do. Eventually the monitor pops and you lose G. You now have an
RG monitor. Very pretty. Then you buy another (trade in on new) and it
does the same. Then you start thinking of selling this piece of crap where
the keyboard stops working randomly. Oh no, I am remembering.
F1GP is ALOT later than 1987.

1987

520ST 1040ST $799
SF35$ SC1224 $350
SC1224 sold for $750.cdn.

My A500 cost

A500 $850
1084 monitor (first one) $400.

Could have bought the 1040, but I wanted the Amiga as I already owned a 520.

Add
Memory, There was a moment in time when they were cheap.
$200. After 1987 these went up ridiculously if you could even get the plug in.
Add second drive. $300

$1750. To me this turned out to be ALOT OF MONEY to do most of what I could do
with an ST for $650.

Now I did buy a 314 and that was $300 (ouch) to play leisure suit larry2;-), and
the game wasn't that good. But that was still on $900 and I had Two Drives.
Memory wasn't as easy to install but my upgrade board is a piece of cake.
It started with 5meg and was upgradable to 2meg. (Don't ask about the 2meg
Price:-).

For $1750 I wasn't happy after having spent $1200 for a machine that didn't
work. To have it break OFTEN within 6 months was only frustrating.
My 520ST, well, it is still here and I am using it RIGHT NOW.

>>> When games makers started to use
>>>the custom hardware of the Amiga rather than doing simple ports from
>>>the ST there was little chance of the ST keeping up.

Amiga and games are synonomous. And this is my point. Drop the games from
an A500 in 1987 and you have NOTHING. Now to follow on your comment, you are
correct. This doesn't mean the ST was incapable of playing a game or having
one written for it. Often I heard it couldn't be done and somehow it was.
There is a price involved for everything, and this drives the market more than
anything else. Look around and see big blue and MS:-).
>
>What I meant was that to start with games were coded for the ST and
>then the code was tweaked to work on the Amiga. As far as most

>people were concerned the systems were the same.

I follow you now.

>Later as developers wanted to push things further they started to
>take advantages of the Amiga's many extra abilities. So it got to
>the stage where developers would write games for the Amiga and the
>publishers would ask if the game could be converted to the ST
>quickly. If not they wouldn't bother.

Don't forget the word Quickly. I am not a big game player as it is. If it is fun that is neat. If it takes advantage of the ST that is neat, what more can you ask. Do you think marble madness ported to the ST from the Amiga took advantage of the ST or Advantage of Me:-). I have seen games that do MORE than that piece of crap on an ST. Well of course you can answer me, but I don't want to debate games.

I want to debate an OS that was incomplete in 1987 and was unuseable on a machine that had many other features.

>I would be interested to know what kind of realtime animation you
>mean. I am not trying to prove you wrong or anything I am just
>curious.

I know. Any animation we made could not be run in Realtime on the Amiga in 300*200 let alone 640*400 16colour, on the A3000. Actually any animation we ported from the ST couldn't. Anything we did on the Amiga we decided to do single frame.

The Animations I speak of are industrial, technical animations. I could send you a VHS tape of ST animations from 1985-90. The best is the Spaceman, which won many awards. The V8 engine with all the Cams and pistons moving as it rotates and the oil swishing around tapped out the ST but ran in real time. This couldn't on the Amiga. Now a PC is used. It can run these in realtime. An Alpha would be nice:-).
However since different formats of video tape exit there it would be more trouble than worth. Most of the work is copyright because of who was involved. MacDonald Douglas Aircraft. Eagle Precision Benders. Therefore the really good stuff is seen at tradeshows. Anyways the earlywork was done on Atari for 5 years then on Amiga from 1991 to 1996. Most modelling was still being made with Cyberscuplt until about 1994-5. Then we used Calligary but mainly stuck with lightwave. The ST continued to intrigue me for what it had done. Everything was STOLEN in 1996 then in 1997 TWICE. So, now i use this,.

PS, I am not sure if I would say the Falcon is better than the A3000. A very similar argument. There are differences. So far I have seen the STock A3000 is visually faster than this STock Falcon. Never had more than 5 meg in the A3000 though:-).

I also remember seeing dynacadd work faster on the 3000 than on the TT. But you won't get me to come around and say that the A500 was anygood.

Your are correct about the Falcon being late. So was the TT for that matter.
If the falcon had come out earlier, it may have kept us in the Scene longer.
We saw the first one in early 1990s. Can't remember if 1991 or 2.
Atari wanted us to use it, but there was no software, and lexicor seemed
to be to far behind in development compared to other platforms. Especially
Amiga. Now that there is/was stuff developed for the falcon, I am going to have
fun like you:-). We were early beta testers for lexicore, but it convinced us
we couldn't wait, although we would like to have aided development.

Just like you wouldn't use an Amiga now for professional work, when a PC or Alpha
works so much better. But for just fooling around a falcon or an Amiga are
just fine. But not an A500 amiga from 1987, thats just crap imho:-).

>
>Rich.

No problem Rich. Good talking with you. 11 years and you would think the bitterness
would reside:-).

I like 3d models and animations. Thats all. And I have discovered a warm
spot for Atari computers:-).

Now knowing you own a falcon I am going to have many questions for you:-).

THere is an Amazing Difference. And I am not trying to sell you on anything
here:-). It is the BEST thing for your ST. I use Mono almost always.

Is there much difference, with a Mono Monitor,
>will images in Cab be clearer and text more sharp?

Graphics won't be much different in CAB. But you can look at the graphic pictures
later with a viewer on your colour.

> Is there another
>Mono Emulator out there thats better than Sebra? Will I be able to buy
>some sort of socket switch to flick between colour monitor and the
>mono one(I don't want to wear out plugs/socket)?

Yes there is. THere are a few, one is called monitor master and it does the
job. You can switch back and forth. THere is a better one, but you can find
it cheap or used somewhere,.

Finally is it worth
>buying one, or should I save my hard earned pennies?

It is not worth not having. Mono Monitors used are selling for about $30cdn
here in Canada. Thats $20US and 15UKP.

Well this is good new for me. I like UIS III, and currently BOXKITE is installed
on my Falcon. It seems nice, but UIS is what I am familiar with.
Anyone care to comment between the two prg.
I don't think Boxkite is registered on my new machine btw.
How can I find out if it is or not?

I've just connected an SLM605 printer to my TT, and it works great
except for one little annoying thing:
If I start the TT without turning on the printer, I loose the
drive A icon and cannot access the floppy drive in any way.

Is this a known problem, and is there a fix?

Cross-posted to: alt.steinberg.cubase,comp.sys.atari.st,comp.sys.atari.st.tech,comp.sys.atari.programmer,comp.sys.atari.advocacy,comp.sys.atari.8bit

Dear Atari owners,

I am wondering if anyone can help me.

I own an Atari Mega 1 that I use for music. It originally came with Microsoft Word for ST and I currently need to do some word processing on it.

Unfortunately, though I still have the mauals and documentation, the Word disk was stolen and I need to get a replacement. Does anyone have a copy of Word for ST they can send me or email me?

Please email me directly since I do not receive all postings to the group.

Thank you for your assistance,

Robert Davis

p.s. Please don't flame me about software piracy. I have purchased all the software I use, I do own a licence for this package and this package is not currently sold commercially.

Robert Davis

4221. Help needed with CD drive & Extendos Pro

Newsgroup: comp.sys.atari.st
Date: 1998-03-02 00:00:00 UTC
From: mike.borsley@zetnet.co.uk
Message-ID: <6df0cj$or3$1@irk.zetnet.co.uk>
Source record: 106509

Hi everybody,
I'm getting problems with my Toshiba XM-330ITA CD Rom
drive. The CD carrier ejects all the time, and when I try to access the
drive on the desktop I get the report 'O/P device hasn't received any data.

The driver I'm using is ExtendosPro 2.4A. I've tried it with and
without Magic 5.11, also without any other PRG's or accessories both at
boot up from the auto folder and from the desktop, but I still get the same
warning message. The computer is an STFM TOS 1.02 4mb ram, hard disk driver
CBHD.

I've checked continuity of all the connections which are OK,
voltages are 4.5v and 10.5v.

I would be glad of any help with this. The voltages seem to be
about 10% low, does anybody know if this would have any effect re this
problem?

Thanks for any replies
Mike

From: dlormand@aztec.asu.edu
Message-ID: <6df0n5$241@news.asu.edu>
Source record: 106510

While we're on the subject of TOS ROMs,

The correct way to upgrade the TOS in your ST is to buy a legal
set of EPROMs from a dealer.

1. ARE there any dealers who sell TOS ROMs? None of the catalogs
I've received, none of the Web pages I've visited, make any mention
of selling ROM sets.

2. If there are NOT any dealers, or even not any reasonably
convenient ones, at what point are you justified in copying the 1.04
ROMs in your STFM to replace the 1.00 ROMS in your backup 520ST?
I don't really want to start the old flamefest about theoretical
versus practical piracy, but I wonder what the thoughts on this
subject are of others who are in similar positions.

It's a known problem, you must start the printer before starting the
^^^^
computer, otherwise it's impossible to not have problems ...

It exist a solution though, you can buy a little device (box) which is
put between the SLM interface and the printer itself ... this device
is fed with some DC voltage and then you can switch on and off your
laser without any problem ... I bought it 4 years ago from a belgian
atari computer store.

:
: Ok, I will look into updating it. Boy updates could cost me a fortune:-).
: I think mint is cool. Now what is N.AES, hate to sound very ignorant.

Your computer's operating system can be divided up into several pieces,
and replacements now exist for almost all of the pieces (Magic replaces
all but a few bits of the underlying OS). One of the pieces of the
operating system is called the AES, and N.AES replaces this. As Geneva
also replaces the AES, and you already own this, you may not need/want to
buy N.AES. The primary purpose of N.AES is to create an environment for
use with MiNT that is more familiar and comfortable to users of the
standard Atari OS, and Geneva does this as well (Magic, which replaces the
AES,a lso replaces the parts of the OS that MiNT replcaes, so it is not
designed to work _with_ MiNT). Anyway, I sometimes use Geneva with MiNT
and am very happy with the combination. I haven't actually used N.AES, so
I can not directly compare and contrast the two, but I do truly believe
they are in many ways comperable.

: Yes, there is a version here, still in original wrapper to. It says the
: latest version. But I can't remember atm. Will it work with SPEEDO, or do
: I dump Speedo Gdos? I have ALOT OF STUFF for speedo so I don't want to
: switch.

The more recent versions of NVDI replace Speedo-GDOS. In other words, you
can dump Speedo from your hard drive, and still use all the programs like
Papyrus that make use of the Speedo technology as these programs will use
the Speedo that is built into NVDI instead of the old standalone Speedo.

If you're talking about a DirecT60 then I can say that most of the
common Atari program will run with the exception of games.
As rule one can say that every properly programmed prog will run.
I don't know about STOS.
In Germany there is a rather expensive *pentium 200* expansion card
available. So nowadays it should be possible to use Window$ 95 aswell.

>when started before MiNT as they allways should.

That's what I thought too but I've been following a tread about
HSMODA/MiNT in * maus.sys.atari.mint*. From what I understand it
should be possible to use the HSMODA drivers from *mint.cnf*
For the common communication prg's like *Connect* there isn't a
problem. To the contrary. I can now use then what wasn't the case with
my normal setup.

The hangs only happens when I reset the system from the keyboard. If I
switch the power off and on the drivers loads fine.
Note: I have a newer Hades which is equiped with EDO RAM and an ET6000
graphic card. The original EDO 10 RAMROM chip wasn't working good.
Since I've changed the chip things were working great but recently I
installed newer graphic card software. Since then I've the hang
problems again. Accoring to Medusa Computersysstem I should change the
loading order of the auto prg's. I did that but nothings seems to
help.

One thing helps however. If I use the system library *Liberty* I can
reboot from keyboard without problem but, yes there is a but again,
Liberty seems to cause some problems too.

I'm not familiar with both but IMHO Boxkite is a much better fs then
UIS. For instance Boxkite supports the use of colors. Furthermore Boxkite
can handle long filenames and above all I believe it's still under
developement.

If you use an unregistrated Boxkite you will have from time to time a
warning saying you're not registrated. Also you can't save your
personal settings.

Wow. I'm impressed with the use of CyberSculpt until so recently. I
have been using it for about 7 years now and I still consider it
exceptionally powerful. Not because of it's features but because of
it's simplicity.

>PS, I am not sure if I would say the Falcon is better than the A3000.

Correct me if I'm wrong, someone, but last I heard they did have a
Pentium card out for the DirecT60. The Computer Direct page hasn't
been updated in a LONG time (1996?) so the info there probably is
outdated. I've heard that it is available and it does run PC/Windows
stuff. Again, someone correct me if I've gotten some wrong info.

|datafiles - mostly First Word (no problem) and a word procesor called
|Script. I really liked it - it had something in common with Signum, but was
|much simpler. Does anyone know where I can find it? And is Harlekin still
|available? And where are the best sources of PD application software?
|Neodesk?
| . . .

I have two versions of Script. The earliest is v1 as sold by Signa Publishing Ltd. It works on ST High only (by that I mean not TT High - it might work in ST Medium) and has no spell check.

Unfortunately v2 was never released in the UK. Signa were working on it before they went out of business but could not fit everything including the spellchecker into a 1 meg machine. I therefore got v2.2 from Application Systems Heidelburg in Germany. It did not work with the UK keyboard but by modifying various ASCII translation tables in the programme and modifying the fonts I did get it to work. Clearly this is _not_ an original programme as it has been altered and I am uncertain of the ethics of selling it on.

I tried to get an upgrade in 1993 but was told that Volker Christen, Karlstrasse 45, D-3300, Braunschweig, Germany had taken over development of the programme. I saw in some recent magazine that v5 had been released in Germany but I was told that there are no plans for importing it into the UK. (Cost of translation vs number of sales and competition with Papyrus.)

I do not use either programme now and can certainly let you have version 1. If people think it is OK to sell the modified version 2 I could let you have that instead. Both versions have original disks and docs.

Brian Van Tilborg (madmax@bfree.on.ca) wrote:
:
: Hi Eric. I just got my Falcon. Perhaps you or James could tell me what the
: Nemesis does? My Falcon is STock with a 16meg ram upgrade. Don't know
: what type of upgrade it is though.

Well, I'm not a gear head, so my explanation may not be the most technically accurate thing. But, basically, the Nemesis speeds the whole computer up by half-again more. The CPU runs at 24 MHz instead of 16 MHz, but it doesn't stop there. Clock doubling of the CPU has existed for some time, but this upgrade modifies the motherboards clock, so everything runs half-again faster (which is why it is half-again rather than twice, some parts of the Falcon just want to go that fast, in fact, a few bits are carefully bypassed and continue to run at the regular speed).

The main problem with Falcon, for me, was the bus speed wasn't fast enough to support True Color in VGA 640x480. The Nemesis fixes that. In the process, it also speeds everything else up to 150%.

Compatability has not been a problem for me at all. Everything runs fine. Even if it were a problem, since the Nemesis defaults to the 16 MHz clock speed and has to switched to 24 MHz by its auto program, you just have to bypass that program to boot into standard Falcon mode. But no software is worth that to me anymore -- I'll dump the program before I'll give up on this extra speed.

I only have 4 megs of RAM in my machine (and this would probably be my own next upgrade, the extra graphics modes the Nemesis allows also demand extra RAM, you see), so I can't give you the details about fitting a RAM board to a Nemesized Falcon, but my understanding is that you should try to get a board that uses a single RAM module, rather than the ones that use 4 modules. I've also heard that it is the RAM chip's speed that is the issue, that 90 nanosecond RAM is too slow, and that 70 is what you need. But all of this last paragraph is secondhand information, I have no personal experience with it. As you already have a RAM board, you may be forced to repopulate it or replace it.

I am told by Computer Direct that the board exists (apparently developed for the Mac?) but that software has to be written to allow it to be used with the DirecT40/60. It plugs into a PCI slot. There is a photo in their ad in issue 4 of Atari Computing. However, it is not cheap (I don't have a price) and it might be as/more cost effective to buy a stand alone PC. It has not been mentioned in later ads.

Don Schoengarth (dons@qnet.com) wrote:
: I just ran across Draconis Web Package along with Adamas Web Browser.
: Can anyone tell me about the use of this web browser. Is it any good?
: Any other Commets

I've been playing with Adamas for a few months now. It gets updated quite frequently. The latest version I used (from February 24th) is getting quite nice. In fact, I prefer the form gadgets in Adamas to any other TOS browser. Adamas supports frames and animated gifs (although frames are a bit shaky in this version, it seemed to me), and now makes use of GDOS fonts as well (although this is also a new addition and the font sizing could use a bit of tweaking). Display speed is a bit slower then CAB, first time around, but then, because of the way Adamas caches things, redisplay of pages is much faster than CAB. All-in-all, CAB is still better. But Adamas is currently free and getting close to as good as the free 1.5 version of CAB.

The downside of the whole thing is, to work on-line you must use the Draconis tcp/ip stack. Adamas will not work with STiNG. At one time I would not have made much of a stink about this as the first version of it worked, and quite easily at that. Sure, I had to configure it, but it was straightforward and worked on the second try (I'd made a bonehead mistake in the configuration that I had to correct). More recently, I have had trouble. Using the same configuration file, now Draconis appears to connect, but any attempt to resolve an offsite IP number times out. Unfortunately, I tossed out the earlier Draconis that worked for me. Now I can only test Adamas offline and hope that the next versions sort out the difficulty.

If you want even more information, check out my article in the upcoming issue of Yackity-YAC (newsletter of the Yolo Atari Club) -- it compares and contrasts Adamas, WEN Suite and CAB.

: names for the same program.

Yeah, I think it is leftover hyperbole from the time when Systems Solutions or ASH thought they had the only PPP tcp-ip stack for TOS or Magic. It certainly has been used in that way (i.e. ppp connect isn't used as the name of the product, but as the description of it: use the ppp connection tool). Well, times change. To be honest, even at the time that they were saying things (including in Atari Computing Magazine) to the affect of this being the first PPP tcp-ip solution, WEN Suite had been out for some time. And now there is STiNG and Draconis as well.

Anyway, just one of my pet peeves, I guess.

Cubase was ment to be used on a high rez monochrome monitor and not color
ones. The reason it looked "big" was because it's trying to fit what
normally would be 640x400(high) on 320x200(low) or 640x200(medium). I'm
surprised it didn't say on boot up "Needs high resolution", but then it
also means it can work with the much higher color resolutions the Falcon
has.

If you can't find a monochrome monitor, use the Sebra mono emulator which
is availible on FTP sites. But it'll never be as good as the actual
monitor so it's best mostly for high rez games and occasional work.

Hope this helps...

All you need is an epson stylus colour driver. Epson was very wrong,
they just dont like their printer's on real computer's I think. I have
sold several 200's,400's,600's and 800's to atari owner,s. What is
needed is Imagecopy 4.whatever and nvdi/speedo, and voila.

Do you mean a DirecT60? That is to say a kit from Computer Direct, Canada comprising a Hades board, graphics card, software etc which you can install in your own PC case? If so, it will not run windows 95 programmes although I understand in the future there _may_ be a 'PC on a board' which plugs into one of the expansion slots. Usually not ST games and I don't know about STOS. It will run properly programmed GEM programmes.

Before I got a TT I used only a mono monitor in ST High. Very stable and very easy to read. I wouldn't consider using ST Medium or Low except for games. If you have a proper mono monitor plugged in when you switch on, the machine automatically boots in ST High.

"TOS Error #35, probably the most common error alert that is not self explanatory, happens when a program you are trying to run has somehow been corrupted. What it means is that TOS can not find some magic numbers it expects to find either at the beginning or at the end of the program file. This error is usually attributable to operator error (as in trying to execute an archive or text file as a program), or to bit rot."

Maybe they are threaded messages that were hidden in group overview.
If the "compress threads" option is selected, you see only the first
article in a thread. To see the others, press the "right arrow" key.

I noticed something like this using a slip connection with STiK. I
tried many MTU settings, but it looks like everything is screaming,
then CAB (or the OVL) will puke. I haven't seen this problem with PPP
however (and STiNG).

-----BEGIN PGP SIGNED MESSAGE-----

Linux/m68k is the port of Linux, a UNIX-like operating system
distributed under the terms of the Free Software Foundation's GNU
General Public License, to computers using the Motorola 68020, 68030,
68040 and 68060 CPUs. Current releases support Amiga, Atari and
Motorola VME systems (MVME 147, 162, 166 and 167); porting efforts are
underway to the Apple Macintosh and various 680x0-based workstations
(at present, the HP 9000/300 series, HP/Apollo Domain series, NeXT and
Sun 3 series). Efforts to port Linux/m68k to other 680x0-based
systems are also encouraged.

The current, complete FAQ is available on the World Wide Web at:

http://www.linux-m68k.org/faq/faq.html (Master site, The Netherlands)
http://www.clark.net/pub/lawrencc/linux/faq/faq.html (USA)
http://ftp.uni-erlangen.de/pub/Linux/LOCAL/680x0/FAQ/faq.html (Germany)
http://amiga.nvg.org/linux/mirrors/lawrencc/faq/faq.html (Norway)
http://www.uk.linux-m68k.org/faq/faq.html (United Kingdom)
http://www.se.linux-m68k.org/faq/faq.html (Sweden)

Conversions of the FAQ into various formats (plain text, PostScript
and DVI) are available at:

ftp://ftp.clark.net/pub/lawrencc/linux/faq/
ftp://ftp.uni-erlangen.de/pub/Linux/LOCAL/680x0/FAQ/
ftp://tsx-11.mit.edu/pub/linux/680x0/FAQ/ (and all tsx-11 mirrors)

The plain text version of the FAQ can also be found at all Linux/m68k
FTP sites and mirrors as "FAQ" or "FAQ.gz" (compressed with GNU gzip).

Christian Jacolot a traduit le FAQ en francais. On peut le retrouver
a: http://web.cnam.fr/Comp/Atari/Linux68k/Faq/

More information about Linux is available on the Internet at
http://www.linux.org/; the Linux/m68k Home Pages are now located at
http://www.linux-m68k.org/, with several mirror sites worldwide (see
http://www.linux-m68k.org/mirrors.html for details).
```

Questions and comments about this post or the FAQ may be directed to
me. General questions about Linux/m68k may be posted to the Usenet
newsgroups comp.os.linux.m68k (English) and maus.os.linux68k
(German). Si vous parlez francais, on peut utiliser le newsgroup

Hi James

If you can get hold of a hi-res monitor or try one, you wouldn't want anything else. The screen is rock solid, and very easy on the eyes.

You can get a box to switch between the 2 monitors, saves you unpluging. I have one that I made myself. If you want to have a go, then let me know and I'll dig the file out, I wrote some instructions on what to do in case someone wanted to build one.

Cheers! for now
Steve

Source record: 106574

Hi there,
I have a little problem concerning the resolution on my Atari Mega1 NT. I've got a "color" SC1425 monitor hooked up to it and I'm trying to run Steinberg Cubase 2.0 on it, but everything is GIGANTIC on the screen and the program windows and menus won't even fit on the screen. Whatever doesn't fit is overlayed on the other side of the screen.
I've changed the resolution in the desktop area from low to medium, because high is disabled and that helped a little, but I still can't use it.
It did work with a friend's screen (SM24) and therefore I suspect a problem in the graphical interface or maybe even just the wrong cable. My screen is connected with on of those long and big connectors (Euroconnector?) with lots of big pins in it. I thought I should try and buy a cable so I can use the TTL RGB plug...

Anyone has any ideas?

P.S. Please also reply to my e-mail address!

That sounds bad! Could be a problem with offscreen bitmaps. Maybe
CAB doesn't close them or Nova VDI doesn't free them. Talk to Gerhard
Huber about this.

Hallo,

Well, we held a picture contest among Czech Graphician and we were
quite succesful. We got 12 pictures, but we miss one important thing.
The judges, who could decide which three pictures are the best. So if you
can help us, please connect to
http://www.geocities.com/SiliconValley/Way/8171 and go to the picture
competetion. I'll be really happy for any answer. Don't be afraid
of size, all the pictures together are only about 150kb long.....

regards, Karel

If the disability is yours rather than the mouse's, try calling The Computability Centre (0800 269545, email tccadmin@bham.ac.uk) for a data sheet on aternatives to mice. If you can visit Liverpool, email me- I have a range of replacements for standard (PC) mice which you are welcome to try.

Neither I nor TCC sell equipment.

Hsmoda drivers have to be BEFORE MiNT. Now the driver gets all to
control
commands and because it doesn't implement them one gets errors.
Don't now about the hang but on my friends Hades hsmoda drivers work
great
when started before MiNT as they allways should.

Daisy-chain the Zip drive from your non-terminated ICD box (leave the
Zip's ID and termination 'as-is'). Run HDDriver's utilities, configure
things and then do a reboot -- your Zip drive should now be accessible.

The Zip tools disk that came with the drive won't be accessible right now
(no DOS-partitioned disk will be, which includes 'new' ones). Run
HDDriver's utilities and partition a test disk (no need to format it).
Use the TOS 1.02 partitioning scheme and then try accessing the drive.
Once you're comfortable everything is working OK, try the other
partitioning schemes.

Put bigdos.prg in your auto folder, near the beginning of the boot order
(otherwise conflicts may occur). When it boots, a quick message is
displayed to the screen. The Zip tools disk and any 'new' ones will now
be accessible. But if a disk was partitioned using HDDriver v7.12's
TOS/DOS scheme then Big-DOS isn't required: you can create a 'swap' disk
using this special scheme, meaning Big-DOS doesn't need to be booted. If
you're running MagiC 5 then Big-DOS isn't required at all.

Note that I don't know how well TOS 1.02 works under these conditions,
nor am I familiar with ICD's FA*ST box. I think TOS 1.02 should be able
to handle the single, somewhat small Zip partition size, though.

>Is there much difference, with a Mono Monitor,
>will images in Cab be clearer and text more sharp?

Absolutely. A monochrome monitor is MUCH more comfortable. It is very stable,
as it's frequency is higher, there is less flicker, and the picture is
sharper (although smaller, really smaller).

>Is there another Mono Emulator out there thats better than Sebra?

No, Sebra is the best. It's pretty good actually if you consider everything
that it does. It does slow down the machine though, and the display is not at
all as sharp as on a monochrome display. It certainly is only useful for short
time sessions though.

>Will I be able to buy some sort of socket switch to flick between colour
>monitor and the mono one(I don't want to wear out plugs/socket)?

Yes, these things do exist. You should look on the 2nd hand market, or maybe
systems solutions has them.

>Finally is it worth buying one, or should I save my hard earned pennies?

Yes, if you use monochrome mode more that 10% of the time, you should really
get one.

Cheers,

Nick.

A quick topo on Atari ST resolutions and monitors:

- A colour monitor (SC something) or TV set can ONLY display medium
(640x200/4) and low res (320x200/16). 99.9% of games REQUIRE a colour monitor.
- A monochrome monitor (SM whatever) can ONLY display hi res (640x400/2). Most
"serious" programs require at least 640x400.
- The ST detects which kind of monitor is connected, and makes only that
available in the preferences.

This means that if you want to run all kinds of programs you NEED both display
types.

A few exceptions to this:
- THere are software "hi-res" emulators, that trick your ST into thinking it
has a monochrome display when it is connected to a colour screen. Check out
SEBRA on most FTP sites. It slows down things, so it's pretty useless with a
time-critical application such as Cubase.
- Some multisync screens can display both, but they are pretty hard to find.

> It did work with a friend's screen (SM24) and therefore I suspect
>a problem in the graphical interface or maybe even just the wrong cable.

Nope. This is absolutely normal behaviour. Your friends screen is a monochrome
monitor. On the other hand, he can't play games with it ;-)

Cubase requires a monochrome screen, so you won't be able to run it on your
colour monitor. I suggest buying a cheap second hand Atari SM124 or SM125.

>My screen is connected with on of those long and big connectors
>(Euroconnector?) with lots of big pins in it. I thought I should try and
>buy a cable so I can use the TTL RGB plug...

Nothing to do with your problem.

>
> Anyone has any ideas?
>
>
>P.S. Please also reply to my e-mail address!

This is something pretty basic for most ST users. I suggest you take a look at the Quick FAQ...

Cheers,

Nick.

PPP Connect only works with MagiC or N.AES/MiNT. Somebody has managed
to get it to work with Geneva/MiNT, but it looked a bit hairy...

Get STinG instead, it works very well with Geneva, atleast on my Mega
ST. I haven't tried it much on my Falcon but apparently it works
flawlessy there as well.

Signum and Script were from ASH, who is still in business. They are now
selling Papyrus, which is probably much better.
http://members.aol.com/ashinfo/english.htm

Try systems solutions for UK distribution.
http://www.system-solutions.co.uk/cafe/

Gribnif, who does Neodesk and Geneva are still selling these.
http://www4.pair.com/gribnif/

I think Harlekin is dead, but that certainly doesn't make piracy acceptable.

Never forget that some people are selling software on the 2nd hand market.
Some even try to make a living out of it. Making commercial software available
for download would be like ripping these people off.

Does anyone use UIS with Harlekin? I find that I am 'stuck' with
Harlekin2's file selector when it is loaded, and so would be
unable to use UIS.

>not using Papyrus in 32k/16m colours so perhaps I don't need v2.66.
>

I am using Papyrus in 32k and I do have a need for this fix. The fix
will allow me to use other Hisoft products as well that use the same
graphics system (for example truepaint). Also, other programs such
as Studio Photo seem to have the same problem.

The only reason I'm telling you all of this is because I can't get
version 2.66 to work on my TT030. I have the NOVA VME plus 32
graphics card (mach 32). Has anyone been able to get version 2.66 to
work with such a setup?

I really need to get a fix for this. I can't take advantage of
the video card when it comes to paint programs.

> can't get one, please email me or post a followup. Thanks!

As far as I know there is no such thing available for the falcon as it's
not powerful enough to run MP3's which are VERY processor intensive.
However I believe there is an mp2 player, I know nothing about it though.

I think we have had enough fun at his expense, so to answer his question...

What you have is most likely Microsoft WRITE, not WORD. Microsoft dropped support for this product within a year of introducing it. They reasoned that if the
Atari users were not willing to support Microsoft they would not support Atari.
This was the result of really bad reviews of the software, and a general bashing
of the product by those that claimed to have purchased it.

I have not seen a copy of this in years. You would do much better by getting
yourself a copy of WordUp.

Brian

... there's a LOT of difference!

>with a Mono Monitor,
>will images in Cab be clearer and text more sharp?

Images, well it depends on what you are looking at. The text will be crystal clear though.

>Is there another
>Mono Emulator out there thats better than Sebra?

Not that I know of.

>Will I be able to buy
>some sort of socket switch to flick between colour monitor and the
>mono one(I don't want to wear out plugs/socket)?

Yes, or you'll be able to make one. Someone will know how.

>Finally is it worth buying one, or should I save my hard earned pennies?

Depends on the price. Put it this way, the only reason I use a colour monitor on the ST is because the mono one is on its last legs - and if I could take the legs off the colour one and put them on the mono one then I would. I think I'm waffling. :-)

4292. Need F2C help

Newsgroup: comp.sys.atari.st
Date: 1998-03-03 00:00:00 UTC
From: norway@interlog.com
Message-ID: <6di3ia$lm9@shell1.interlog.com>
Source record: 106403

Can someone try to compile the fortran code listed below using
the F2C code converter? I can convert it to C, but when I try to
compile it (gcc -v -O nbase.c -lf2cslow -lpml -o nbase.tos) using
the TOS 2.5.8 version of gnu-C I keep getting these error messages
from gcc-ld:

rsfe.o : Undefined symbol _rd_ed referenced from text
rsfe.o : Undefined symbol _rd_ned referenced from text

From the readme file:

This archive contains an Atari ST/TT implementation of a Fortran-to-C
compiler, developed by AT&T Bell Laboratories and Bellcore.

- notice information about copyright, warranty etc.
- f2c.ttp the compiler itself
- f2c.1 man page
- f2c.1t man page for nroff/troff
- f2c.ps Technical report about f2c
- f2c.h include file
- f2c.olb library for 68020/30 machines with 68881 (i.e. Atari TT)
- f2cslow.olb library for any Atari ST/TT (68000, no FPU)

The last three files depend on the C compiler being used to compile the
C programs produced by f2c. The versions included can be used with
GNU-C 1.40 and probably also later releases. In the following it is
assumed that you have a working installation of GNU-C on your system.

Perhaps the f2c utility and library code needs to be re-compiled
using a new version of GNU-C? I've tried to do this (God only knows
how I've tried!!) but have been unsuccessful.

Any help would be appreciated !

Of course not. Why the question ? I've written "AFAIK" haven't I ? I
remember a posting by Oliver where he sort of implied that those are not
in the works. Maybe I'm wrong, so be it. I'm not claiming absolute truth.

Are *you* ASH's spokeman ?

STinG had been there too already, even though it's PPP was still shaky at
the time. The existence of all these stacks makes it even worse that they
had to invent their own API.

> ...
>
> The bugfix will be available on my web page in a couple of days.

The MODULE.LZH with the bugfixed TCP is there now. The delay was due to
additional beta testing of two other improvements that I introduced at
the same time :

- I rewrote the error code generation. The old code was very negligent
returning error codes. Now in virtually all cases the correct code
should be returned.
This might lead to some inconveniences with existing clients. For
instance the old code hardly ever returned E_EOF (-3). Now E_EOF
is returned whenever the remote has closed the connection, and the
last byte was received. This is obviously appropriate. However,
POPwatch for one continues reading beyond the last byte, and now
reports the E_EOF as a real error to the user. I know this is irri-
tating, but can be ignored. Gary is working to release a fixed
version. Similar things may happen with other clients.

- I replaced the TCP checksumming code with a hand-crafted, highly
efficient assembler version. I tested the new code with my recently
completed (but hardly optimised) Ethernet driver for Riebl cards,
on a Mega ST 1. With the old checksum code the throughput I've got
was 78 kByte/s, while with the new one I got 108 kByte/s. This is
a gain of 40 % just for optimising the checksumming ! The checksum
code's performance on it's own must have been boosted to something
like 300 % !
While this translates directly to transfer speed on systems where the
CPU power is the bottleneck (8 MHz 68000 in a Mega ST 1 with Ethernet),
with serial lines one won't see much improved thoughput. This because
the serial line itself is the bottleneck. Still, the faster checksum
code has it's advantages even in that case : It frees CPU power during
transfers, allows doing other tasks meanwhile. So with serial lines
you may well be seeing improved responsivity of the clients, i.e.
smoother handling of windows, slider, menue etc.

> combination. It's a solution isn't it :-)))

Yes. STiK is much more basic is how it achieves it goals, but this is
partially also where it's limitations come from.

I do not have AES 4.1 (even though I did some programming under it a while
ago), which makes it impossible to even look for the culprit. I suspect it
boils down to some messy stuff AES 4.1 does with some system vectors, maybe
even the 200 Hz system timer. Atari has been famous to not even stick to it's
own standards in their software. If my suspicion is right, there is little
apart from awful workarounds that STinG could do about it.

>cousins in the pit of despair. Windows rules and that is the painful fact.

Really. Must be different in the U.S. Canadian territory. Here in the mother
country and Europe, the G3 sales have been burning rubber. Nice try.

>I wouldn't brag about internet tools for the mac. They are light years behind
>what is available for windows. A comparision to the ST though is pretty fun.
>I am interested in a browser and internet software for a Mac plus with 1meg
>of ram and a 20meg drive. What do you recommend? Be certain it will work, tell
>me if I need more ram etc. Oh yeah I am running only system 6.

He he he he. Why not Apple II and III. Hell what about the Atari 8 bit?

Mac internet tools light years behind wintel? That would explain why 64% of
web content development is done on the Mac.

>As for internet tools being sorely lacking. I think these users are out of the
>loop as are many ST users. Most have long dropped their STs. What do you expect

>And who would they be sold too? Atari TOS computers are a cult machine with
>lots of flexibility. They are not a broad based consumer good like a WINDOWS
>based PC. Atari users are alot like Mac Users and Amiga users, they are loyal
>to the bitter end.

A cult machine? That would explain the added cost. The PC and Mac have lots
of flexibility but in a different way but cost less. A G3 233 Desktop is
below $1600.

>Obviously if Atari users wanted mainstream MS office software they would get
>a real computer and run windows. Of course anyone can be a drone.

Wintel is a real computer? I guess the Macs are real Maytag appliances. Have
you seen Office 98 on the Mac? I have since I have a beta. Very nice.

The reason why ATARI DID not take off is that know one knew about them. Kept
it a secret. By pricing so low did not leave a margin to advertise.

As for hate being in my shoes is like eating crow. This is an exciting
oportunity to participate in getting Apple back to healthy status. Apple is
in a upswing now due to strong sales of the high margin G3's and Apple's
renewed upswing in the retail channel due to CompUSA's Apple store with in a
store(SWIAS). Apple made money last Quarter and scored third place in January
for total retail revenue sales.

My role in the Comp's Apple swias is to keep it upto code. Very demanding and
exhilerating job.

Entering Canada is no different. Same restraunt and fast food chains, movies
as well as culture. Is there actually a difference between the two countries
besides one is socialist and the other is capitalist?

> I personally think that Apple's move to dump all their dealers
>other than CompUSA is a giant step backwards. Shouldn't they be trying
>to be getting a foothold rather than kicking the boots off in the
>middle of the quicksand?

Yes and No.
I disagree on the Sears decision. Made since with Best Buy, Office Max and
Circuit City. These stores carried about two cpu Sku's and the overal buying
experience was hurting Apple. Were still in regional retailers like
Microcenter and Fry's who have done well with Apple.

> Too bad you haven't been to a Computer City, it's a pretty good
>store. In fact, they've done a great job refurbishing the Mac
>>department in the last month. I'd highly recommend them now for a Mac
>purchase- but they
>still don't have Mac software in "12 30' piles". In fact, I'd recommend
>them for just about any peripheral purchase

Computer City in the mother country could learn from their child in the
colony. Never say never.

> besides one is socialist and the other is capitalist?

Time for Canada-101 :)

Actually, Canada is a capitalist country. Canada may appear to be socialist because it has a more generous welfare and medical system for those without a lot of money. Education is also heavily subsidized. Culturally, our countries have some striking differences. The most obvious is that Canada is very multi-cultural while the U.S. has a fairly homogenous cultural mix. In Vancouver, for example, nearly 50% of the population speaks a language other than English at home. In the province of Quebec, over half of the citizens speak French as their primary language.

Canadians also tend to have slightly different ethical values. In Canada, carrying firearms is illegal. That may explain why murders occur, per capita, only one tenth as frequently as they do in the U.S. Even if that is not the reason, the difference is striking. The Canadian criminal code is also more focused on rehabilitation and deterrence than retribution. Capital punishment is unconstitutional.

The Canadian political system is also more similar to the British parliamentary system than the U.S. system. Canada is not a democracy (in name); it is a constitutional monarchy. The largest difference between the British and Canadian systems is that Canada has a senate. Of course, the Canadian senate is not elected so it behaves very differently than the U.S. senate. The Canadian public is also more European than American in their outlook regarding the private affairs of their politicians i.e. they regard such affairs as being private.

I haven't mentioned a lot of other differences but they do, of course, exist. Here are a few other facts: Canadians say "eh?" more frequently than Americans, we use the metric system, we have almost 10% unemployment, we have a very small military, we tend to like hockey, we tend to hate baseball and 90% of our population is within 50 miles of the U.S. border.

4311. VCR to SVGA?

Newsgroup: comp.sys.atari.st
Date: 1998-03-03 00:00:00 UTC
From: claytone@aa.net
Message-ID: <888890958.396110@slave2.aa.net>
Source record: 106443

I'm wondering.... is there a way to hook up a VCR's output to my Falcon's SVGA monitor? It wouldn't necessarily need to be THRU the Falcon, unless that's the only way. I'm guessing some sort of video analog to digital converter. I don't want to sink much money into this as it isn't a high priority. Just curious. I have temporary use of a VCR, and when I hook it up to my tiny 3.3 inch LCD television, it seems to lose a little of the visual impact if you can imagine. ;-)

Thanx for any input,

Clayton Murray

Sad, but true. If it weren't for my strong anti-piracy
beliefs, I would be asking for the "crack" Really Loud
in this newsgroup. I feel "taken advantage of", but I
suppose I can't blame the authors for protecting their work.

>What if I have TWO hard drive crashes.

Since Compo, the supplier, is no longer around, you're
out of luck. You can probably buy another one from
B&C Computervisions ... and I probably will after my
Last Installation occurs. It's a really nice image
manipulation tool.

One thing you might try: before defragmenting, go through
the Official Deinstllation Process. Deinstalling doesn't
work after a defragmentation, either. <aargh>

>I was going to format everything and reinstall the software so that I get a
>feel for what is happening. Usually I do this often so I can remember
>the procedures. Boy could this have been a mistake.

>
>Thanks for the advice. I think this is silly as I defragment my SH204 on
>a weekly basis because of being on this NG:-). Its always about 70% fragmented
>after only a week of internet use.

I finally decided that an external drive should hold
the stuff that frequently appears/disappears, since
it's a lot easier to replace an external drive. Has
it paid off? Not yet ... it's just a superstitious
activity.

>>Have a good time!
>

>I really am:-). However each comparison shows me how good my ST really is.

The built-in Microphone/Speaker ports, the ability to
plug in VGA monitors, and the updated SCSI-II port
make the Falcon a better machine, IMHO.

I've already sent my "wish list" for the next machine
directly to Wizztronics. If there's something you'd
like to see on the next Atari-compatible machine, now
is the time to send them an email.

>Also being a real loser, I have put the Falcon in ST high.

Isn't that the screen with the fastest redraw? Doesn't sound
like a loser to me....

> I also like showing the desktop as text.

Me, too.

Best Electronics for one should still be selling these. I seem to remember seeing TOS boards (including ROMs) from Titan or Systems Solutions in the UK. In France Centek sells them too. Don't the Gemulator authors also have a licence to sell the EPROMs too ? Wizztronics also might have such a licence. There maybe others.

Then, there's the second hand market.

>
>2. If there are NOT any dealers, or even not any reasonably

>subject are of others who are in similar positions.

One thing is the legal rights still pertained by JTS, owner of what's left of Atari. Another thing is the moral implications of what you suggest.

As long as there are still companies that support Atari, and are trying to stay afloat by doing so, then you would be ripping them off by giving away TOS.

Some companies have paid hard money to licence TOS, either to be allowed to make TOS EPROMs themselves, or to continue development of the TOS/GEM environment. These people have very little reason to continue supporting the Atari platform, certainly the little money they might earn from this is not the only motivation. Pissing these people off would eliminate the last commercial support we have.

Cheers,

Nick.

>tanks

The Operating System (TOS) and the GEM Desktop are in ROM. Just switch on the machine with no disk in the drive, and wait a few minutes for the desktop to come up by itself. Then format a blank double density (not HD) floppy. You will see if your STF has a single or double sided floppy drive (360K or 720K). Once you can boot with a formatted floppy in the drive, it's a lot faster.

You don't need anything, except whatever application software you want to run with the machine, and probably to read the Quick FAQ where there is all sorts of information for beginners. See below...

As far as hard drives go, you need either an old Atari HD, or a modern SCSI drive with an additional SCSI host adapter interface.

Good luck

Cheers,

Nick.

1) I&#65533;m planning on a TOS upgrade to my 520 STm (1MB). Which version is good?
I have 1.02 today (2 chip, socketed). I have other ST computers in use with
all kind of TOS versions. But they are in use, so I don&#65533;t want to move this
chips around! Is there any way I can burn my own TOS-chips?

2) Is there a way of upgrading the shifter, or in some other way have better
resolution and more colors?

3) Is there a way of connecting another 3 MB to an upgraded 512kb (1MB,
another 512kb soldered "piggy-back" on the motherboard?

4) Has anybody a copy of the Field Service Manual, ST.

5) On one motherboard (CO70243, REV. I) there are some components missing!
C107, C108, C110, C121, C127, C130, C210. Is that normal?

Cheers, Krister!

4323. Help needed with CD drive & Extendos Pro

Newsgroup: comp.sys.atari.st
Date: 1998-03-03 00:00:00 UTC
From: james.burr@acpu.com
Message-ID: <888904363@acpu.com>
Source record: 106455

-> Hi everybody,
-> I'm getting problems with my Toshiba XM-330ITA CD Rom
-> drive. The CD carrier ejects all the time, and when I try to access the
-> drive on the desktop I get the report 'O/P device hasn't received any data.

I had the very same problem with my Plextor 6 Plex CD reader.

-> The driver I'm using is ExtendosPro 2.4A. I've tried it with and
-> without Magic 5.11, also without any other PRG's or accessories both at
-> boot up from the auto folder and from the desktop, but I still get the same
-> warning message. The computer is an STFM TOS 1.02 4mb ram, hard disk driver
-> CBHD.

-> I've checked continuity of all the connections which are OK,
-> voltages are 4.5v and 10.5v.

-> I would be glad of any help with this. The voltages seem to be
-> about 10% low, does anybody know if this would have any effect re this
-> problem?

I spent months trying to figure this problem out. I even sent
panic-mail to Roger Burrows about this. My solution was replacing the
case that housed the CD ROM drive and the power supply.

What happened was that the ribbon cable the connected the CD ROM drive
to the two Centronic connectors had a short between two pins. I
couldn't find a replacement cable so I had to buy a new case. It was a
$15.00 deal and fixed that problem very well.

Also I had a HP Coyote 1.4 gig SCSI hard drive connected and
unfortunately that same problem scrambled the FATs and data and I lost
over 500 megs of files. Of coarse I had all the original distribution
disks and I put them back on it which took two weeks or so.

I mentioned that as a word of caution if you have a hard drive
connected. Your problem was the exact same symtoms as mine.

Later,
James

Source record: 106457

Hi Chris,

>Does anyone have any drivers for the ST or Falcon which will drive my OKI
>PAGE 4W laser printer.
Hmm, that 'W' seems to mean its a WIN-printer with GDI interface, so you cannot use it with the atari machines unless someone writes a driver for it.
A WIN-GDI printer is exactly the same principle as the atari laser: they both use computer RAM for page setup.
I think these winpage-lasers are not so far away from the slm ones and it may be not so difficult to write a driver for it when one has the sources of the slm drivers.
But that is something completely different;-)

See ya

Dietmar

No this isn't possible on an ST. There is the Replay 16 cartridge, but I don't
think it can do DtD comparable with today's standard.

```
If I refer to your other posts regarding upgrading an ST, I think you might be
better off directly getting a Falcon instead of upgrading an old ST. For what
you plan to do with the machine, a Falcon sounds a lot better.

Cheers,

Nick.

>

Yes, you can make an image of one of the ROMs you already have and burn them into an EPROM. You need a program to save the ROM image. There are plenty of these around. You also need an EPROM programmer or someone who can do it for you.

An STM can take up to 1.04 normally, or 2.06 with some modification. You'll find descriptions of these modifications in the Quick FAQ. Between 1.02 and 1.04 there are not many differences, except regarding HD access. 2.06 is a different TOS altogether.

>2) Is there a way of upgrading the shifter, or in some other way have better
>resolution and more colors?

Not on a plain ST AFAIK. Graphic cards will require some sort of bus that your ST doesn't have.

>
>3) Is there a way of connecting another 3 MB to an upgraded 512kb (1MB,
>another 512kb soldered "piggy-back" on the motherboard?

I don't think so, not without an expansion board anyway.

>stuff. Again, someone correct me if I've gotten some wrong info.

well as of the other day, compdirect.com seems to have been placed
down for reconstruction.

"The Direct Group of Companies has outgrown their
current Internet Service provider and are in the process
of moving files to their new Website Hosting Service
where we will have the tools and resources for better
core services."

-odd too, since i was hitting it extensively over the past week for
t60 info, and in vain hopes of a price update.

I believe this was Colonial Conquest from SSI. It was available for just
about every system under the sun at that period in time... I think it
originated on the Apple II... running in low-res mode!

Hope that helps.

Vezz has some hacks that are solutions to many of your needs.

Eric

BTW: About burning ROMs: What was the deal w/ KaosTos? Is it held
under the Atari copyright or can it be freely used? Just curious.

4338. fVDI v0.80 released

Newsgroup: comp.sys.atari.st
Date: 1998-03-03 00:00:00 UTC
From: rand@cd.chalmers.se
Message-ID: <6dh6s1cet1@nyheter.chalmers.se>
Source record: 106470

A first version of the Fenix/Fast/Free VDI (or fVDI for short) has now
been released!

fVDI v0.80 as released should work in any Atari monochrome or four plane
(16 colours) graphics mode, but the colour device driver (which only
accelerates line drawing (see the fVDI WWW pages)) is _very_ slow.
It's possible that some monochrome graphics cards will work too.

This is of course still far from a complete VDI implementation, but
quite a lot of software seems to work fine as it is.
Please, let me know of any problems you run into if you test it.

I'd expect performance (in monochrome) to be somewhere between Atari's
VDI and NVDI on most machines. Later versions will improve on this (the
goal is to be at least as fast as NVDI), especially in the text drawing
area (lots of overhead per character with the current implementation).
Since I can only test fVDI on my Falcon+AB040, I'd be very interested
in hearing how it performs on other hardware.

To download fVDI (or just to read more about it), go to my WWW pages.

Papyrus will import Signum (and Script) *.STX files if TEXTCONV.PRG is in the module folder in the Papyrus folder. (This programme comes with Papyrus.) The resulting *.PAP file can then be exported as *.RTF.

|I have not checked that number yet, but it results of a direct copy/paste
|of Computerinsel original mail.
| . . .

You're right! Thanks. I got through but . . . it didn't recognise me. I did send my registration form off but to Homa Systems and perhaps it hasn't got to ComputerInsel yet. (Mind you the BBS wanted my date of birth and I don't recall giving that in my registration.) Anyway I am not using Papyrus in 32k/16m colours so perhaps I don't need v2.66.

What I would appreciate is some explanation why I can't have a resolution of 1289 x 960 in 2 'colours' on a greyscale monitor. I have a ATi Mach 64 card with 4 mb vram in a DirecT60 pci slot. When I try and setup the resolutions and colours using VMG_PCI.PRG v1.50, all is well until I enter the resolutions in the Virtual Resolution box. If I have set 2 colours I get an error message saying in effect 'picture too big! Maximum size 1048576' yet it accepts the same resolution in 256 colours. The result is that I have to put up with odd shades of grey in various programmes and often have difficulty in reading superimposed text. I presume the rest of the world is enjoying beautiful shades of blue and red and other colours :-) NB this has nothing to do with pixel frequency, line frequency etc.

Homa Systems did indicate that the PC, and therefore cards designed for it, no longer supports 2 or 16 colours. But why should a setup using a smaller amount of memory be rejected when one using a larger amount is accepted? Any suggestions?

Etc etc

Apart from the fact that binaries aren't welcome in this newsgroup, you failed to say where you live!

It's only fair and sensible to state clearly in the subject line with regard to For Sale notices where you are or where you will ship to, so that the rest of us don't download items that are of no use!

It was agreed after a fair bit of discussion about a year or so ago that For Sale notices in this newsgroup would include country of origin or state which areas you'd sell to. Not everyone lives in the USA or the UK. This is an international group and you should bear this in mind.

Something along the lines of:

FS - Falcon (UK, but will ship worldwide)

or

FS - Falcon (UK only)

would have been much better and would have got you a much better response probably! ;-)

I recall that it depends on the motherboard etc. The onboard memory
must be disabled somehow though. I think their method (presumably to
avoid soldering) was to attach a jumper somewhere to disable it. I
also recall I didn't like this too much because if the jumper ever
came loose the onboard memory would become active again so at certain
points I departed from the instructions, making it even harder to
remember.

I have a Toshiba XM-4101TA wich I guess shold work in exactly the same way. I use it with my falcon.
It works both in TOS and in Magic. I have to use to different setups though ...

In TOS I use metados in the autofolder. It works together with config.sys and the drivers hs-cdrom.bos and hs-iso.dos (I believe they came form cd-tools..?)

The config.sys looks like this:

```
;METADOS SETTINGS in TOS
; devices
;
; BOS drivers
*BOS, c:\auto\hs-cdrom.bos, A:13
;*BOS, c:\auto\cdargen.bos, A:13
;
; DOS drivers
*DOS, c:\auto\hs-iso.dos -c16, Z:A
;*DOS, c:\auto\iso996f.dos -c16, Z:A
;
```

and it gives me drive Z on the desktop.
The scsi-ID must be set to 5 for this setup.

In Magic I use the metaxbs.prg from the SPIN-package.
Disable metados under magic!
I also uses THE SAME config.sys but you also have to
put the SPINMAGC.XFS in the C:\gemeys\magic\xtensions -folder

The SPIN collection solved the problems for me! It can be
downloaded from on of the berlin servers:

ftp.cs.tu-berlin.de
ftp.fu-berlin.de

.if it`s not the cable...

good luck

I have Newsie v.082

1) I read on a previous post about Newsie browser. Obviously there are later versions available! What's the latest and where can I get it from?

2) Is it possible to specify multiple recipients on either the To or CC lines? I've tried using separators of comma, semi-colon and space but they don't seem to work!

Sorry about the confusion on my previous post! That was my first post in a newsgroup, and I put the message in as an attachment instead of in the body of the message as text. Please excuse that and if you see multiple postings of this. I asked a couple of friends to post it for me because I didn't want another fiasco.

FOR SALE

Falcon030
14 MB RAM
1.44 MB floppy
IDE hard drive ~90 meg
Buncha extra digital and audio chips
Socket for math co-processor
Super VGA: 640 x 480, 256 colors; True Color, up to 65,536 colors

Philips 1557AS Fast Refresh/15 EVGA with tilt/turn pedestal
Can display up to 1024 x 768 pixels @ non-interlaced 70 Hz refresh
Can accept output from CD-ROM, sound boards, etc., via stereo inputs
Headphone jack and volume control on front
Built-in twin speakers
Full set of H-size, H-shift, V-size, V-shift, contrast, and brightness controls on front
Excellent mate for the Falcon030

All Things Falcon CD-ROM

$575 for the package or best reasonable offer. You pay shipping.

(Could include NEC MultiSpin 3Xp CD-ROM reader and Extendos for appropriate extra amount.)

Send e-mail.

AFAIK it reserves memory for more folders. i.e. more windows opened
on the desktop, that is _not_ to say more windows on the desktop, you
are still limited there to seven(?)

> I am running Neodesk 4 and Geneva and have sometimes got this error.
> Out of Internal Memory, use folder100.prg
> Kev.
look for Atari TOS patches. you'll probably find cachennn.prg,
foldernnn.prg nnn standing for the size of the cache and the number
of extra folders respectively. Alternately if you use ICD or HD
Driver, you can set the number of extra folders in these HD drivers.

There should be an install program along the PAXs. Have a look in an
previous archive, it's the same.
AFAIR they are self extracting archives and you can try to rename them in
TOS, or load them in STZip LZHshell or 2in1.

Thanks for the very informative post, Brian - proves once again
that not only is TIFKAS (The Idiot Forever Known As Sinclap) a TROLL,
he's also a CLUELESS troll, who isn't an expert on ANYTHING, much less
computers. He's been outgunned, out-shouted, and outed as a total
ignoramous who's redoubled his efforts to smear Atari users (and to an
almost equal extent, me, because of the fact I'm his most vocal critic)
when he's lost sight of his original goals of disrupting this newsgroup
with off-topic trolls and spam.

TIFKAS' worst nightmare is about to come true, though - we're
making it a goal on TAF to get as many members of the club up and
running with their Ataris using the wonderful suite of TOS-based
Internet clients (which, contrary to TIFKAS' misinformed missives, are
superlative) to come onto this newsgroup and ask him more embarassing
questions about his "expertise".

One can find much better informed Mac info in
comp.sys.mac.advocacy, a place where TIFKAS is too YELLOW to go into
and give his supposed good news about the Mac - maybe it's the fact
that he'll be rendered EXTRA-CRISPY in seconds :)

I suspect that rather than going on a "well-deserved vacation to
sample fine gourmet beers", TIFKAS will soon be on a more permanent
vacation scrounging through garbage cans looking for 1/2-empty bottles

of MD 20/20........

>
No, I don't have "compress threads" selected. I think I've found the
problem- it's the "read-for-offline"-hangs-on-posts-with-three-bytes-in
-the-last-block syndrome. The post on which it hangs is filed in the
current newsgroup folder in OFFLINE, but no entry is made in the
coresponding XOVER.TXT index file, so the post is invisible, isn't
found, and therefore doesn't get deleted.

I prepared this reply on Monday, but before I had finished off-line
reading, the entire contents of my NEWSIE folder vanished off my
SCSI HDD. Fortunately, as well as a backup on a Zip disk (worth every
penny!) I have taken to backing up DEFAULT.GRP onto a separate HDD every
day (an IDE drive as C: for Afterburner to boot from) so that the next
download doesn't try to fetch the last couple of weeks items. Something
similar happened an hour ago- half the contents of the NEWSIE folder
vanished, and one of the remaining files reported a ridiculously large
size. This was whilst browsing through an offline newsgroup. Is this a
Newsie problem, or should I replace my SCSI HDD?

Yes, but you need a SCSI host adapter interface. Any HD driver software will
do, although HDDriver is recommended for support of extra Zip specificities.

certainly - just get ahold of a Link '97 from Titan Designs (it's a host adaptor) and plug that into the ZIP using the appropriate cable; you might also want to get the current version of HD Driver, as it supports special aspects of the ZIP (like password protection).

Also take into consideration that the ZIP doesn't provide power through the cable (which host adaptors like the Link require to operate), so you'll need to run another drive in the chain as well to provide that. But then, when you've got a SCSI-based system the world will be your oyster what with utilizing scanners, CD-ROMs, tape backup and additional drives..... :)

Hi,

a few weeks ago I got a Mega STE - however without any manuals. Thus,
I do not know the pinout connections for the 9 Pin D-SUB connectors of
the modem and serial ports. A simple cable with all nine wires connected
one-to-one does not work with my modem (Elsa MicroLink 28TQV).

Could anyone please mail me a precise description of the pinouts
for these port connectors ?

Thanks in advance

Rudolf

Non Tech answer.
An ST with TOS 1.0 can only open 40 folders or directories in one session.
You can quickly reach this with an HD, using Geneva or even Cab.
THerefore memory is designated to increase this value.
Folderxxx.prg is what you want. You set the value to 100 or 200 I use
300.

TOS 1.04 is less of a problem but it still exists. I don't know about
newer TOS but it is still mentioned in my falcon manual so I am a little
concerned:-).

-> Not that I ever heard of.

-> J > Will I be able to buy some sort of socket switch to flick
-> J > between colour monitor and the mono one(I don't want to wear
-> J > out plugs/socket)?

There's also some adapters and hacks out there that would allow you to use a SVGA monitor so you wouldn't have to switch monitors. Maybe someone out there could shed a little light on this.

Later,
James

Release 2.01 is fine cause it will nicely fit in 1Meg. Version up to 3.02
will also work, but you'll get less memory for the song... IMHO, get 3.02
and a ram expansion ;-)
Bye, bye.

Actually, there is a port of DOOM for the Falcon. I forget the URL for it, but there was a post to this newsgroup not long ago about a second version of this port now being available.

I think the assumption of most Falcon owners, although perhaps it hasn't been voiced, is that the hand-coded, DSP supporting, Bad Mood would be a much faster and more fun game engine than a port of DOOM. Plus, the ability to implement a network scheme that the Falcon could support is also a possiblity. In my opninon (which holds little weight as I am not a coder and so can not contribute in a meaningful way to the project), I think Bad Mood should finish what they started and not get distracted by the release of the Doom code except in the case where examination of the code can help solve a problem the Bad Mood team is confronting.

Hi Steve,

A while back you enquired about fonts for Calligrapher -
well they decided to use a proprietary format and so you
wont find any in the Public Domain, nor font conversion
utilities for them.

You will be reduced to trying to buy additional ones,
therefore, from anyone willing to sell them!

: Newsie, CAB and STiNG for you all in one go.

I wonder if anyone else feels as I do that it might be nice to have a wizard just for STiNG, for those that want STiNG but not necessarily all the other programs. Maybe they want Telnet, or Newsie but not CAB, or whatever. And it seems like the STiNg setup is the most complicated. The commercial CAB comes with its own setup wizard, by the way.

Source record: 106369

I currently keep an old PC around for compatibility reasons (although it is rarely used). I'm getting tired of the instability of windows and was thinking about trying a mac instead. My question is, since I do most of my work on my Atari TT, how would I transfer any information back and forth should the need arise? Can an Atari read Macintosh disks or can a Macintosh read Atari disks?

Depending on the information you're wanting to transfer between
machines, newer Mac's can be made to read PC-formatted disks, which
your TT can, also. Even if there might be problems using
Atari-formatted disks, there is a program that lets your Atari format
PC-formatted disks. I once used my Atari to create a MIDI file, saved
it on a PC disk, and printed it on a PowerMac.

On 4 Mar 98, outrider wrote:

>BTW, does this message come with the appropriate reference line?

Your particular reference entry is there, Terry, but most of the others are now missing (those in-between the very first and very last). Although your header shows the X-Mailer as Net2Net, the omission of the other references is exactly what NEWSie does.

If I do a followup in which the references have been formatted (i.e. not all on one line, like Peter's), once qed kicks in only the first and last references appear -- those in the middle are no where to be found. I have to reconstruct things by grabbing the source article in NEWSie's offline path and then carefully copying the references that went missing into newstest.txt's header (the followup's). This isn't very elegant but it works to keep threading intact. If all the reference entries are on one line then NEWSie doesn't have a problem with followups (except if a reference entry is over 50 characters, in which case it will be truncated).

Many NEWSie (and Net2Net) users won't even know a reference problem is occurring. But like I say, this occurs only when the reference entries are 'formatted', which usually means a long, intact thread like this one _used_ to be <g>). I've seen both spaces and tabs used for formatting (indenting) the additional reference lines -- somehow this confuses certain mailers.

An alternative, although not a better one, is to use MacSee 2.00. It allows high-density Mac disks to be read by the TT (but only if the TT has a high-density drive). I bought a used copy, so I'm not sure if it's even available these days. The program, obviously commercial, has a 1992 date, published by REEVEsoft and written by Alan D. Reeve. It has worked great the few times I've needed it.

It shouldn't do that.

Are you sure you have FVDI.SYS set up correctly?
Perhaps you forgot to change the device driver line after you tested in
16 colours? For monochrome mode, you have to use 1PLANE.SYS there.

Beware of this rip-off artist!

Sold him some software that was worth $250, for a mere
$50/software and $5/s/h.

IT's professional software from Doctor T/KCS Omega.

Anyway....beware! I never got paid for this. After he promised
me several times that he would send and nothing came, I knew I
would never see my money again. The third time he promised to
send the money via FEDEX...sometime last week, and said I would
receive the money within a couple iof days....that was 4 days
ago.

Just sent him email this a.m., and got returned undeliverable
mail for that email address. Weasel, changed his email address.

Think some of his old mail, has his full snail mail address! I
will also post that soon. I am no fool!

But this is a note...this guy runs a MIDI studio somewhere....I
will post city of operation also.

His real name:

Archie McLeod III
McStudios Ltd.

Unless he was lying about that too...doubt it though!

Beware all...this guy is a thief, and a weasel...do not
sell him anything as he cannot be trusted! Believe me!
I lost my software and cash!

Aloha

Vern

Atarians beware! This guy is running Atari Hardware...thus
my program KCS Omega DR.T Full MIDI program gone!

This has been an annoying bug since the SLM804 days. On the 804 people were advised to open the rear hatch so the high electricity consuming parts would be off until ready to print. Phantom of the Laser corrected this by supplying power to the interface while the printer was off.

Petter Toneff wrote:

New at Systems For Tomorrow March, 4th 1998
~~~~~~~~~~~~~~~~~~~~~~~~~~

Atari Computing Magazine #8 $9.99
In this issue: Reviews of Thing 1.2, jinnee, Zero X, MagiC 5, Running and more. Tutorials for STOS, Papyrus, HiSoft BASIC. All the regular features and the return of CyberSTrider. Includes Reader Disk. From Renegade Publishing. Note: We also have a limited quantity of #7 in Stock. Issues 4-6 are available for special order.

Atari Computing Subscriptions
In addition to our standing order option, we are now accepting 3 and 6 issue subscriptions to Atari Computing. Here's the deal: (Prices include Reader Disk and delivery to the US or Canada.)
Standing Order: $11 per issue (must have a credit card)
3 Issue Subscription: $30
6 Issue Subscription: $55

Suzy B's Treasury Vol 2 CD $29.99
This CD from Suzy B Software continues the tradition of bringing you "a honey of a deal." It includes the best in Atari PD and Shareware, all clearly described by "The Unabashed Atariophile" of Z*Net, AEO and ST Report fame. It's been three years since the first collection and thousands of new files have arrived. Most files are compressed in ZIP format in order to fit more data onto the CD. We also have received more copies of the origional Suzy B's two CD set, now also priced at $29.99. From Suzy B's Software.

Link 97 for ST/STe/TT $89.99
Easly connect harddisks, CD ROM drives, streamers etc. to your DMA port. Technical features: SCSI 2 Commands (Harddisks above 1 GB can be used), Parity, SCSI Initator Identification (Harddisks like the Quantum Fireball series can be used), You can connect up to 7 SCSI devices. Note: Does not include driver software. From WB Systemtechnik.

DTP+G Desktop Publishing CD $39.99
A desktop publisher's dream! This CD contains over 3,600 fonts in Calamus, True Type, Postscript, GDOS, Signum, and other formats. It has over 8,000 pieces of clip art as well as DTP support programs, printer drivers, word processors, font editors, CAD software, printer utilities, and more. Over 90% of this CD is in English! It also includes four commercial packages: Family Roots I, DegasArt, Edith Pro, and X-Lator. From Floppyshop.
~~~~~~~~~~~~~~~~~~~~~~~~~~

Scan X: UMAX for TOS Computers $49.99
This new edition of the Scan X scanner drivers provides support
for the UMAX Astra 1200s and VISTA S-12 scanners. A MicroTek
E3/E6/35T+ version is also available. From Homa Systems.

RAM Gizmo /w 14MB for Falcon030 **SALE** $99.99
Wow! RAM prices sure have droped over the last couple years..
This is by far our best price ever. Under $100 (well a little)
for a populated RAM Gizmo with 14MB RAM! Limited quantity
available. From chroMAGIC.

HD Driver 7 for TOS Computers $49.99
Latest version of the best Hard Drive software you can get.
Upgrades from v5 or v6 are available for $25. The return of your
manual and disk are required for the upgrade, Email for details.
From System Solutions.

Electronic Cow!
Three cool music applications! For more information check out
the Electronic Cow link on our web site!

MIDI Arpeggiator for TOS Computers $27.99
Sound Chip Synth for TOS Computers $19.99
Snippit Synth for TOS Computers $29.99

Also Available:
CAB 2.5 $49.99 HTML browser /w PPP socket for MagiC!
Atari Works $79.99 Easy to use home/office suite.
Lattice C 5.6 $139.99 C Compiler.
True Image $29.99 Image Processing Package.
Alien Thing (Expert) $19.99 Alien Blasting fun!
Tetris II $11.99 Cool Tetris game
Power Up $19.99 Racing fun for ST/STe/TT/Falcon
Desktop Solitaire $19.99 8 solitaire card games for TT/Falcon
Face Value $69.99 Visual style GFA programming
All Things Falcon CD $9.99 Tons of Falcon PD/Shareware on CD
Hard Disk Sentry $39.99 Optimize that Hard Drive
Photo Show Falcon $9.99 View Photo CD discs on the Falcon
Card File 4 $29.99 Personal Information Manager
Moving Pixels CD $29.99 Software Collection /w sources on CD
ESG Clipart CD $19.99 IMG, CVG and GEM/s clipart on CD
True Paint $19.99 GEM based paint package
Plus about 400 additional products for your TOS Computer!

It was installed when I bought it - a fairly clean-looking job.

F > What revision does your TT have?

I really don't know. I had Alex at ATY take the CaTT out. I am not totally clueless with a soldering iron, but my skills haven't been used much since the days of vacuum tubes :). Really.

>
> Yes. :^(

I have noticed this as well, as I mentioned in a different thread a few
weeks ago. It's a bit of a pain, especially when the files it doesn't
delete are largish binaries, but a quick comparison with what's on the
disc and what's listed soon gets rid of the unlisted files.

I'll have to admit that my MST with the HBST36 and MagiC was quite
impressive, especially compaired to a stock Falcon. I only found
that timing dependent software was incompatible (re: GFA Raytrace, ect).
Most games ran well, if abit to fast:). If I ever get my hands on an
inexpensive STacy, it will get the nod for installation.
I always wanted a PAK, but couldn't get anyone to sell me a complete
one (in the U.S.). My TT at 44Mhz is pretty competitive, and when I
find some time, i'll get it to stop crashing at 64Mhz:).

Hi Jan,
Thanks for your reply. You may have noticed in another post
that initially I'm going to try upgrading to Extendos 2.4B, also check for
shorts in the cable. Thats the easy bit. If this doesn't solve the problem
then I'll check out my config with yours. I did download Spin a few days
ago but fairly quickly put it in my 'I'll think about it box'. Setting up
software isn't one of my favourite things to do. When the docs are in
German the box tends to get covered up.

Thanks again & best wishes
Mike

Hi James,
Thanks for your advice, I must admit I've only checked
continuity of the ribbon cable and voltage, it never occurred to me to
check for shorts, so I think that will be the next job. It has also been
suggested to me that I must upgrade to Extendos v2.4B so I've downloaded a
patch to carry out the upgrade, which I must install as soon as poss.

Oh dear me, I've had more than my fair share of that sort of
problem this last 12 months so I will certainly be wary.

Ahhh... FTP uploads work fine now! Thanks, Peter -- I can finally lay STiK to rest.

A question: why are FTP uploads so much slower than downloads? I've heard a few others mention this, too. After using STiK for almost two years, STinG is faster in every respect except FTP uploading, which is just as slow as STiK was (about 300% slower than downloading).

Hi all

In a desperate attempt to stop my wife divorcing me i have the following software
for sale. All original and boxed except * = no box but has manual.
(f) = falcon only. Prices include p&p in UK, all in UK pounds.

7.50 each -

LLAMAZAP (f)
CROWN OF CREATION (f)

4.50 each or 8.00 for any 2 items, 10.00 any 3 items -

ROBINSONS REQUIEM
TEAM
ZOOL
AMBERSTAR
WIZKID
MULTITOS (COMPO VER)
ELITE
POWER UP
JINXTER
PC DITTO (software PC emulator)
MUG SHOT
LEMMINGS + MORE LEMMINGS *
UTOPIA *
DEUTEROS *

2.50 each or 3.50 any 2 items -

BUISINESS COPUTING MODULE (ST WORD/CALC/DATA)
DARK CENTURY
C.O.T.U.S.
PHOENIX
DARK CASTLE *
PANZA KICK BOXING
ULTIMATE VIRUS KILLER (V6.6)
DRIVIN FORCE
MACH 3

If you require any other details or want to make a silly offer,
eg i'd take 55pounds for the lot! email or 'phone.

regards Steve

Hi
Anyone want 70 + Atari magazines before i throw them out ?
You'll need to collect them or pay p&p. Titles include Atari Format/User/Review, Page 6, Analog, Monitor. From 1984-93ish, no cover disks (some of these mags talk about putting a cover tape on!). Most dual format ie 8bit & ST. A little bit of history and a good insight to the early days of the ST.

Just email or 'phone if interested.

Those PAX files should be decompressed by the installation program that come with the GemView package.

Cheers,

Nick.

You need the Gvinstal.prg (or something like that, its the Gemview install program) to decompress the .PAX file. I'm sure its right there at funet.fi in the Gemview dir.

Actually, that's not really a demo. It's BAD MOOD itself. ;-)

>still while you walk around them, Is it finised ? and will it be fully

The latest released version of BAD MOOD is 3.07, IIRC, which might well
be what you have.

>playable ? Or has the idea been

It's still intended to be playable one day...

Unfortunately, not many people are willing to do any actual programming
on it at all, and those that do have many other things on their mind.
At the moment I think there's some sporadic development on the AI,
BadC (our upcoming module interface) and the line collisions checks.
There has also been some thinking about combining the current 3D engine
with the recently released DOOM sources. It's rather strange that noone
seems to have ported DOOM to the Atari machines yet (there is half a
dozen or more ports for the Amiga).

>scrapped. Any one tell me..

It's not scrapped, but don't expect anything new for a while.

Everyone is _very_ welcome to join the BAD MOOD project.

Looks alright now. The reference line is a little short, but this is a
proper decision by the software (ok with standards), and thus can hardly
be argued. It makes a difference only in those cases where the message
you reply to arrives later than yours, which is usually not the case even
on Usenet.

So : Well done. ;-)

Cheers Peter

Oh yes, you're right. I failed to pay attention to that. It's ok to omit older references for a shorter "Reference:" line, but the ones kept should be the last ones, not the first one and the last one.

> newstest.txt's header (the followup's). This isn't very elegant but it
> works to keep threading intact.

For correct threading, only the last entry is required, provided the corresponding article has already arrived on the readers news server. To care for the latter uncertainty, more entries should indeed be provided. However, as it is now with Terry's message, it is almost ok.

> line then NEWSie doesn't have a problem with followups (except if a

> truncated).

Does NEWSie have a problem with entries larger than 50 characters ? Why is that ?

Your choice. If I hear a piece of information then I'll quote it where
appropriate, and give indication that the information has some uncertainty,
for which an agreed upon instrument is adding a "AFAIK". This is all I would,
and all I did, and all what can be read from it, and nobody will interprete
it any different, except he's never heard of "AFAIK".

4426. Megafile 30 and Floppy Drive Help Needed

Newsgroup: comp.sys.atari.st
Date: 1998-03-05 00:00:00 UTC
From: Andrew Krieg <krieg@execpc.com>
Message-ID: <6dnt6q$moj@newsops.execpc.com>
Source record: 106243

I found a Megafile 30 at a thrift store today for $5. Hopefully it works, and I can replace the Franken-hard-drive I am currently using (controller card mounted in PC case w/ 20 meg SCSI drive that is slow as molasses). It has power and I can hear the fan when I turn it on so that is half the battle! I look forward to moving to the smaller footprint of the Megafile.

What is the name of DMA to hard drive cable that I need for this unit?

My current system uses the Berkley Microsystems tools for installing the controller and setting the clock on the HD. I currently use Supra Hard Disk Boot 2.62 and some ancient version of Supra Tools to boot and manage the drive. Does the Megafile have an internal clock?

Is there some set of public domain hard drive management software that I can use instead? If not, will the Supra Tools support the Megafile 30?

All of this may be moot as my ST will not read from either of my floppy drives lately. The hard drive boots and works fine. I can initially read a directory listing from a floppy. If I try to run a program it grinds and crashes. If I try to insert a 2nd disk and read its directory, I get a garbled mess; a mixture of the files on the disk and files from the last directoy I accessed (floppy or hard drive) listed as the contents of the new disk.

Since both drives fail, I'm assuming it is a problem with the computer and not the drives (I tried swapping the order of the drives and the cables with the same results). I'm afraid the drives might be permanently damaging my disks.

Has anyone encountered this floppy problem? Is there a cheap fix or is my ST toast?

No one is really helping you, are they? :) You have some files to convert, and you want to find either pd/shareware software to do the converting, and/or software to run unter the Atari OS.

How about if you tell us about where you live? There are several mail order stores that are very good, but are you in Europe or North America or where? Then we can make some recommendations.

There are a few pd conversion programs, and several pd/shareware wordprocessor programs on the internet. Perhaps others who know more could recommend their names? :)

Most of the commercial software can be found either from the mail order stores, or watch here, there are often people listing all their ST software for sale. Maybe you can pick up what you want that way.

While I don't have any names for you, at least I won't bother arguing which word processor is the best - that wasn't your question!!!! ;)

4435. Cracks In Windows Armor

Newsgroup: comp.sys.atari.st
Date: 1998-03-05 00:00:00 UTC
From: strads@tmisnet.com
Message-ID: <34fdc2ba.1673754@news.tmisnet.com>
Source record: 106294

In the March Issue of "PC Computing" (Ziff-Davis publishing, USA edition, page 87, "Guilty" by Paul Somerson) is the following (edited):

"OK, I admit it. I was wrong. I've been a Microsoft defender for a decade and a half ... but today I just switched sides. And it's Windows that put me over the edge."

...

"You normally reboot into "Safe Mode", ... but no joy. And the skimpy manuals, endlessly busy tech-support lines, and so-called Web support sites were a time-consuming, useless pain."

"So I reinstalled Windows. It kept stumbling over files where the versions on the Windows CD (remember, this is a brand-new PC out of the box) were older than similarly named files on the hard disk."

...

"So I tried to re-reinstall Windows with the older files. ... At the very end of the tedius process it flagged bad clusters, and made me hit the Enter key to fix them _one_ _at_ _a_ _time_. After _2,000_ (!!!) mind-numbing Enter key taps, I gave up and propped a manual on the Enter key to keep it pressed down."

...

"When I eventually re-re-reinstalled it, half the peripherals didn't work. What a mess. Windows is the ultimate tar baby -- the more you struggle the deeper you get until you're hopelessly ensnared."

...

"We recently asked you to tell us your PC horror stories. And you flooded us with venom-dripping tales of woe, almost all of them about Windows. Windows is an utter piece of junk. It is a big joke, except that the laugh's on us. It is an absurdly overcomplicated usability nightmare."

"This is nuts. Microsoft _netted_ around $4 billion
from OS sales last year -- you'd think they could
spend a few bucks fixing it."

<wow!> I sent a polite email to Mr. Somerson explaining
that Microsoft's competitor since Windows 1.0 -- GEM --
is still around (as MagiC), that it (GEM) had been
continuously in use and updated during that time, and
that it presented a worthwhile alternative to Microsoft
for basic business applications (specifically mentioning
the Papyrus word processor and the Texel spreadsheet).

He replied that he was "unaware of this development"
and that it might receive coverage in an upcoming
"alternate OS's" article.

Keep an eye out for the "Alternate OS Issue" of
PC Computing. Glance through it when it comes out
... and if MagiC or GEM gets coverage, be ready to
send a thank-you note to the editor!

Developments and coverage like this are just
what we need.

Hello John,

I thought the archive was still active, so I checked just now. Still there, (whew!). You had me worried. In my Newsie86 FTP server I have it listed as: ftp.ibp.fr/pub6/atari. According to Newsie's LOG file, it looks like it's supposed to be "pub8". Tried that and it also works fine. I have heard other variations, but it works for me as listed. I have logon set to "ftp", and the password set to my email address.

Best regards,

Clayton Murray

>ftp.ibp.fr/pub6/atari. According to Newsie's LOG file, it looks like it's
>supposed to be "pub8". Tried that and it also works fine. I have heard
>other variations, but it works for me as listed. I have logon set to "ftp",
>and the password set to my email address.
>

The correct address is ftp://ftp.lip6.fr/pub/atari

The ibp server is no longer maintained, and the address should be /pub/, not
/pub6/ or /pub3/, because these are changed by the server each time you
connect.

Cheers,

Nick.

Or you use a SCSI drive that has DOS compatible partitions. These
partitions can be used by Macs, PCs and the Atari (MagiC or Big-DOS and
HDDRIVER recommended to have full access to PC compatible partitions.)

window.

That buzzing sound could be your Win95 sound-volume settings. Try Half-way
on Synth and Waw and Master-volume. Shut down Aux and CD-volume and
microphone, etc...
You can even try to shut down the *bad* ST-samples in the Pacifist emulator!
YM files and ST sound refers to "PC-software-players". With these you can
enjoy classic ST-tunes on your PC!

>Same problem. So, I decided to shut down all the way to MS-Dos mode, but
when I
>tried to run it from there, I got this msg: "[PMODE/W] = Not enough memory
>available" How can this be?

Maybe you have a "EMM386.EXE noxms xxx" or something in your AUTOEXEC.BAT in
your rootdir. You can try to REM this line or use "EMM386.EXE noems"
instead. The EMM386.EXE and HIMEM.SYS files is there to handle memory under
DOS. You really don&#65533;t need them under Win95, &#65533;cause it has an own
mem-handler!

If you run under DOS, you need to set an environment variable to get sound.
Use: SET BLASTER= A220 I5 D1, write under plain DOS, or use it in a
.BAT-file or whatsoever!

Cheers, Krister!

I have 64 megs of ram (on my PC), 600k

I use it on my Falcon in plain Tos (and MiNT too), not with Magic. AFAIK
it is requiered by some programs (Zorg come in mind) and it do not deal
only with HD folders (something to do with memory management IIRC) even
with some recent HD drivers.

Hi

If you are using HDDRIVER or ICD these are not necessary as this is
built into the driver.

Look closely at the video port on the back of your
Falcon ... it's a ***19-Pin*** d-Sub connector!
You'll need to get the Atari adapter (maybe US$15.00)
from your local Atari dealer.

The downside is the cost of the adapter, the upside
is compatibility with Atari's existing SC1224 and
SM124 monitors.

: STinG is definitly *not* difficult to setup.

STiNG is as easy to set-up as it _can_ be, but this is not to say it is not more complicated to set-up than most programs.

As an example, some programs can come in a self-extracting archive and you double click on it and it unarchives into its own folder and it is doen. From then on you just double click on the program (the only one ending in .PRG) and the program runs fine.

With STiNG, some bits need to go in the auto folder, some in your CPX folder, sometimes you have to install HSMODEM, in which case you need to make sure you select the right HSMODEM module and make sure the bits in the autofolder go in in the correct order (which can be further complicated depending on what else is in this fodler, e.g. MiNT). These are the kinds of things I think a wizard could be especially helpful with (especially if you are setting up masquerade).

All of the configuration stuff within STiNG and within Newsie and within CAB is already as wizardlike as it can be, I thought; which is why I thought a STiNG install wizard would be the most useful tool at this time. But maybe Rory has other ideas.

Well I've had a close look at the connecting pins on the
CD rom circuit board and it looks clean, I've also checked the ribbon
cable with a meter for possible shorts, and that checks out A1.
I've upgraded Extendos to ver. 2.4B and rebooted but I still get the
'Output device hasn't received any data' message

I've checked out the cable and that seems ok. I've given spin a try but I'm not sure about the config.sys file. I don't seem to have the iso996f.dos referred to. Is this supposed to be in the Spin package?

I seem to recall in one of the past news items someone referring to an english translation of the spin docs. Does anyone know of this, or am I dreaming?

Thanks in advance for replies

Hi Folks,

I have tried to phone the company icd (www.icd.com)
to by an SCSI adapter for Mega ST. Yet, nobody responds
(although an answering mashine is there). Also email is
ignored. Does the company still exists?

Anyway, does somebody have a spare SCSI-adapter for
Mega ST for sale?

Thanks,

I used PageStream for many years and just wanted to confirm Gostl's
comment with regard to defragging. PageStream survived MANY defrag
episodes on my machines -- both STf & Falcon -- without a hiccup.
If you had a problem with PGS after a defrag, then my guess is that
the problem was coincidental to other issues at play.

Cheers Roy.. I just been this second (I hadnt bookmarked it either..
been before but).....Anyway these are the features and it looks like
its supposed to be very compatable ? :)

Features:

TCP/IP Stack.
PPP Protocol driver.
All TOS versions (Single & Multitasking systems), on any ATARI with at
least 1MB of RAM.
Fully configurable modem configuration.
Common configuration of all parameters (Modem/Proxy/Gateways...).
Dial-In scripts.

All ATARIs with one meg..hmmmm sounds good..

.

Cheers -- Tony Greenwood (Official Filos Examples Programmer)

I had a look at the site and I can't see any place where it says it won't work on an STf. Unfortunately, I only own the Falcon and can not test. But it runs find on the Falcon under plain TOS and under Geneva (which the author didn't test with, which is an indication that this is a reasonably compatable application) in Falcon resolutions and standard ST resolutions, including ST Low and ST Medium (although the images don't resive the way they do in CAB to compensate for the unusual double height pixel size in ST-Medium, this may be a feature that will be added later, remember this is a beta preview) .

r> others are now missing (those in-between the very first and very last).
r> Although your header shows the X-Mailer as Net2Net, the omission of the
r> other references is exactly what NEWSie does.

Yes, I believe Net2Net only supports one reference line. Note that Net2Net converts to and from FTN (FidoNet), so I think it's good that it supports reference lines at all, since they are not used in FidoNet (which has its own method of threading). Net2Net is not even a reader, but simply a conversion program (though a very powerful one).

I'm just glad to see that I have it working now (at least partially).

Thanks for the info.

4478. Notator hack for atari emulator?

Newsgroup: comp.sys.atari.st
Date: 1998-03-05 00:00:00 UTC
From: Mike McGowan <jmmcgowan@worldnet.att.net>
Message-ID: <6dnmbr$oe1@bgtnsc02.worldnet.att.net>
Source record: 106337
Cross-posted to: comp.sys.atari.advocacy,comp.sys.atari.st

I have several copies of Notator w/dongles that I have been using on aging st's in a midi lab. At any rate, because Notator is "dongle" protected, running the program on a emulator seems unlikely--but, is there a "dongle-less" hack for this program. Notator is still one of the best sequencing/notation programs around. It would be great if it would run under emulation on a PC, too.

This might just be a dream, but I thought I'd ask!

TIA

I concur. If you ever actually _used_ MS Write and got any kind of
decent output, you're a far better man than I. Write was way worse than
worthless (damn! what's a synonym for than that starts with w?). Even

Word Writer would be better, though WordUp is a good replacement.
Personally, I would go with a cheap copy of Calamus 1.09n or Pagestream.
They're overkill, but they're cheap!

Why Gates would ever think that users of computers with a Digital
Research based OS would use an MS product is beyond me...

Dan

Newer Macintoshs can read PC-compatible disks, so the TT can. Thatï¿½s one
way.

Another is to plug your (TT-) SCSI drive to your Mac and read it with
MagiCMac. MagiCMac is a operating system where TOS software runs.

There is NoSTalgia, too, but it is an early beta and not as fast as
MagiCMac.

Date: 1998-03-05 00:00:00 UTC
From: fideldahan@aol.com
Message-ID: <19980305002400.TAA13995@ladder02.news.aol.com>
Source record: 106388

I have a question to those of you familiar with running ST emulators on a PC. I'm kind of new to all this and I need a little help, please. I have been able to get Pacifist (0.48) to run and I also have had success converting some of my original disks from my ST to work on the emulator. Problem is, when I hit 'G' to go to the desktop, it goes there, but I get a pretty loud, constant humm/buzzing sound. This is continual and accompanies everything from that point on (even when I go to a game). I can hear the music behind this, but it really ruins the sound. It completely stops buzzing though when I hit F12 to go to the 'change disk' screen. I hit 'esc' then to exit that screen and the buzz starts again immediately. Is there another file I am missing to get the sound better? What is all this talk about 'YM files' and 'STsound'? Do I need these? I run Pacifist from W95 (double click) and also I tried it from a dos window. Same problem. So, I decided to shut down all the way to MS-Dos mode, but when I tried to run it from there, I got this msg: "[PMODE/W] = Not enough memory available" How can this be? I have 64 megs of ram (on my PC), 600k conventional, and I even tried setting memory higher and lower for the ST in the pacifist.ini file. Out of desperation I tried another emulator, Stonex. I don't get the buzzing with it, but the features in Pacifist make it the only choice. Any help would be GREATLY appreciated. Sys Specs: P200, 64Megs ram, Ensoniq Soundscape Vivo, plenty of HD space... I have a TON of old ST files and I sure would like to get this running properly. Thanks alot.

Message-ID: <19980306212001.QAA00971@ladder02.news.aol.com>
Source record: 106190

THE COMPUTER DUNGEON has received new items in stock including:

Atari Computing Issue #8 (VERY limited number of Issue #7 left)

ST Plus Fanzine Issue #26 (March) is now in stock and looking GREAT!

Five **NEW** Atari 2600 Games including Oystron, Rescue Bira Bira, This Planet Sucks, Okie Dokie, and Edtris.

Suzy B's Software Treasury Vol. 2

Used Lynx Systems w/Qix Cartridge

Used Jaguar CD systems w/4 CD's

Many used software titles (games and utilities) arriving in the next few days and we'll be updating our website listings.

And we'll be adding more full registered Shareware titles to your listings within the next few days.

For more information about these and other products, visit our website at:

http://www.mcs.net/~isis/dungeon/dungeon.htm

Thanks for taking the time to read this and we look forward to hearing from you.

I recently upgraded my modem from 28.8 to 56k. I bought the new US Robotics 56K Faxmodem, which supports the new standard, as well as x2.

It works with STING, and with Stalker, but it won't work with STraightFax. I keep getting a "no response from the modem" message, even though the send and receive lights are blinking. Anyone have any idea what settings I could change to get it to work? This is the first problem I have ever had with Straight FAx.

Actually the media is the same on both the MFM and the RLL platters. Both MFM and RLL do use chocolate or silver Oxide on the platters. The PCB on the drives themselves are different though. As you stated the RLL will write about 1 1/2 times more information on the same given space. Though a MFM unit can be used with an RLL controller card. I know some people that have used the ST 225 (MFM) in place of the ST-238(RLL) and have had no problems for years with reading or writing to it. I used a ST-251-1 (MFM 40 meg) for yeasr on a BBS with a RLL controller (60 megs with RLL format) with no loss of information. I really doubt that in most cases a person would work his drives as hard as ones that were on a BBS. When it was cheaper to have your hard drive repaired instead of replacing it, I used to see alot of this going on.

> "Lift and Drop" technique.

It is never a good way to try to fix any electronic equipment. This is a dirty cheap fast way to MAYBE get it going again. The proper way is to remove the chips from their sockets - clean and reinsert them. Or you could go one step further and replace that PLCC socket with a better one that uses gold plated contacts. The ones Atari used were cheap and tend to fail due to corrosion. Lifting and dropping the computer could damage the PCBor something else in the process. This described technique could lead to more damage than you started with. If you decide to do this "LIFT and DROP" repair..... Well I hope it all goes well. There is the right way / the wrong way / and the Lift and Drop way to repair your machine. From experience, I would suggest that this isn't going to cure the problem that you are having with the floppies. If in the end you can't seem to get it to work. Let me know. I can fix about anything on the ST, short of someone axing the machine.

This is a great program if you forget to turn on you external drive before you boot, but it WILL NOT be a cure for the problem that he is experiencing.

> The ping.prg working has nothing to do with the tcp.stx, right?

Right. But the TraceRoute does hardly anymore than ping, and if that one
crashes ... Anyway, just to test a theory. If you have my TelStar V0.8 (do
not use the V1.0 for this test), under AES 4.1 try to connect to some host
with it by specifying the IP address, *not* the domain name. You can try
130.75.75.17 if you like. You won't get in as you don't have an account.
But if you get a window showing some login prompt then I might have an idea
what causes the trouble with AES 4.1

> get STinG to do this :) Every little bit helps on the Net...

No software can detect BUSY on it's own, it's the modem's business. After the
modem reports BUSY, STinG will have a delay of maybe two seconds until it's
starts dialing again (if the redial delay is zero). So you need to convince
your modem to detect BUSY in some quicker way ! I know there are modems that
simply need this time and can't do any faster.

Do not misunderstand this. References are all entries into the *same* single
line !

> reference lines at all, since they are not used in FidoNet (which has its own
> method of threading). Net2Net is not even a reader, but simply a conversion
> program (though a very powerful one).

Ok, so maybe it can't do any better as Fido does not support enough info.
Dunno about Fido threading, but it's feasible that it only needs the first
message of a thread and the message the current one is replying to for it's
threading.

4505. STING and FTP

Newsgroup: comp.sys.atari.st
Date: 1998-03-06 00:00:00 UTC
From: rosco@game-master.com
Message-ID: <0kKL.39$6e.575989@wagner.videotron.net>
Source record: 106249

I'm sorry to say that I'm still not able to use FTP with STING. I DL'd the latest modules yesterday from Peter's web page, but the problem remains, and its seems like I'm the only one...

Small transfers are usually OK (less than 100k), but larger files get scrambled. I tried 2 DL's yesterday from nic.funet.fi and these are the results:

original file size received file size
MKM 78824 78336
CLIX 370610 370176

In the STATISTICS dialog of the STING Dialer, I found this:

Port: MODEM 2 dropped 1
Protocol: ICMP dropped 0
TCP dropped 14
UDP dropped 6
Resolver dropped 0

My system: MegaSTE, GVC 28800 in Modem 2, HSMODEM7, the latest STING package using PPP.

I have absolutely no problems with file transfers via ZMODEM. My ISP offers FTP through their BBS, so I am able to get files this way. It would be nice though, just to use STING.

"Does anyone have a copy of Logic 2.5 for Atari Falcon,ST,STe
computers.?

"Please post it or e-mail it to me at:
escaisey@ibl.bm

"I want to test program to see if it is worth upgrading from version
2.01 or not.

"Thank You

"Sean

If I recall correctly, 2.01 is a version of Logic AUDIO. I think Logic (regular, without audio) went from 2.00 to 2.5. For Logic AUDIO, 2.01 is the last version. For Logic (regular), 2.5 is the last version. Emagic plans NO futher developement of either version last I heard. ;-(I have Logic AUDIO 2.01, and I have also purchased Logic 2.5. It is nicer than 2.00. Is it worth it??? I suppose so. Depends on if you are unhappy with 2.00. I haven't really used it all that much, so I'm not the best person to answer that question. I still do most of my sequencing with Hybrid Art's EDITRACK. One good thing... version 2.5 is all in ONE book. None of the frustrating tutorial, manual, addendum, etc. It cost me about US$100 for the upgrade.

Hope that helps,

Clayton Murray

Message-ID: <6do2da$92j$1@pale-rider.INS.CWRU.Edu>
Source record: 106253

Does anyone out there have a working softPC, who has been able to make a bootable hard disk (.hdf file) of a size larger than the 1 Meg supplied with the distribution package?
I have tried many configurations in vain. I can boot fine from floppy, with dr-dos, which loads stuff from drive d: or c:, but cant make a bootable partition.
If any one can, could you:
1) give me detailed instructions on what i may be doing wrong and what to do right?
2) Make me an *empty* 32 MEG bootable disk, except for system stuff, of course, zip it up and mail it to me? I have found that an EMPTY disk of that size only takes 300k or so, quite easy to e-mail.

Also, has anyone been able to use the drive E:, which i UNDERSTAND is supposed to be an Atari folder for easy transfer in and out of the Atari system. What am i doing wrong, or do i misunderstand it?

> found, and therefore doesn't get deleted.

This can't be the sole cause of the problem then since I have the same problem and I use NEWSwatch to collect the news. What I have noticed is that the articles that are not deleted are usually, though not always, those that contain a binary and were decoded with window buffering on.

Just for Johns information, and anyone else who's interested, it seems as though the file isn't being closed after it's read into memory and, in my case, Magic is not allowing the deletion of the file because it is still open for reading. The XOVER.TXT file has the entry removed and is saved when the group is changed, so the file becomes hidden to NEWSie.

This was found out a few minutes ago when I tried to delete some files without exiting NEWSie first. All the times previous to this, I had quit and started NEWSie some time later.

The same as it does if you start a game in high res. The only exception to this is Frontier, which seems to reprogram the shifter without a reboot. That part of the code would be interesting to see, just to find out how it's been done.

And now back on topic. If you're good with a soldering iron you can make your own to match the monitors you've got at the moment. I made one for my SM 124 and green screen monitors. 'Twas quick and easy, since the green screen uses a composite input.

> J > Finally is it worth buying one, or should I save my hard

It is nice and sharp, although the SVGA monitor I got to replace mine seems to be about the same in picture quality. It's just a pity it doesn't work with ST low/medium res as well.

Source record: 106256

Hi, fellow Atari people!

I got a version of Mint off the Internet for my Atari ST, because it seemed like it would let me multitask! But it doesn't, the manual seems to indicate that it's only for specially designed programs. There is a desk accessory for loading TOS programs though.

This is quite disappointing. I was hoping to be able to multitask GEM programs. I heard that Mint is or is going to be made into MultiTOS, but as it stands it's pretty useless on my computer.

Is there a way to get Mint to multitask like I want?

Hard disk drivers that offer the appropriate option do exactly the same
ad FOLDRxxx does. There is absolutely no difference between drivers
offering this option or using FOLDRxxx.

Pacifist is the best if you want to play games and demos. It emulates the ST
at a hardware level. Get Pacifist v0.48 today!

Tosbox is very good when it comes to GEM-program emulation. It handles
different resolution. I.e. 1024x768 16-colors...

The dongle isn't the only problem. The emulator would have to emulate the Midi
ports too, and also the accurate timing that's required by any sequencer
program. PCs just have crappy timing, whatever you do the ST is way ahead as
far as MIDI-only sequencing goes.

Cheers,

Nick.

>the latter uncertainty, more entries should indeed be provided. However, as
>it is now with Terry's message, it is almost ok.

Well, if NEWSie shows the first and last references then it's doing
things correctly. To clarify, when I say 'last' I mean the _source_
article's reference, so it has to be on one's server to reply to it <g>.
Having all the source article's references included in a followup is what
I thought to be correct, this based on the references 'trail' that some
mailers leave. Now that I think about it, including only the first and
last references does make sense, in that a very, very busy thread could
potentially generate a few extra thousand bytes in references for each
article <g>.

>Does NEWSie have a problem with entries larger than 50 characters ? Why is
>that ?

That's a good question. NEWSie also restricts the 'subject' length as
well (44 characters, and then things get truncated). Not that I want to
have more characters than that, mind you, but some followups do have long
subject lines. Perhaps NEWSie's limit is within 'standards' (I dunno).
But the 50-character reference entry limit is definitely not big enough
for some server IDs.

> so that is half the battle! I look forward to moving to the smaller
> footprint of the Megafile.

The Megafile 30 and 60 have RLL drives. The Megafile 20 and the SH 204
have MFM drives. If the drive in your Megafile doesn't work, you will
have to find another RLL drive because MFM drives just don't cut it,
even though physically they might look exactly the same (RLL writes
1 1/2 times the amount of data in one sector as MFM).

> What is the name of DMA to hard drive cable that I need for this unit?

You need an Atari DMA cable or any 19-pin to 19-pin cable (it's
a straight-through connection).

> My current system uses the Berkley Microsystems tools for installing
> the controller and setting the clock on the HD. I currently use
> Supra Hard Disk Boot 2.62 and some ancient version of Supra Tools to
> boot and manage the drive. Does the Megafile have an internal clock?

Supra Tools are fine. You can get the absolutely last version (4.x)
for free by going to Supra's web site. You can also use Atari's
HD Utilities and AHDI. No, there is no internal clock.

> Is there some set of public domain hard drive management software
> that I can use instead? If not, will the Supra Tools support the
> Megafile 30?

Yes.

> damaging my disks.
>

> Has anyone encountered this floppy problem? Is there a cheap fix or is
> my ST toast?

Problems with floppy drives could be due to many things. Here
are a few suggestions.

Before you start soldering or doing anything drastic, try the
"Lift and Drop" technique. This consists of lifting one end
of your ST about 4-6 inches above the table and dropping it.
Then do the same with the other end. This has the effect of
reseating chips that have undergone "chip creep", i.e.,
that have "wiggled" out of their sockets because of heat
changes, etc.

Obviously, you should do this when you computer is NOT on.
It would also not be a good idea to do this if you have an
internal hard disk unless you remove it first.

Another thing you could try would be DC Format's Floppy
Configurator which is available on BBS's and Public Domain
disks. This is a small program you can run from the desktop
to turn floppy drives on and off, and set seek time for
non-standard floppy drives. It comes in handy if you forget
to turn on your "B" drive before you boot up.

Hope this helps.

Dan,

> Why Gates would ever think that users of computers
> with a Digital Research based OS would use an MS
> product is beyond me...

The problem wasn't that Microsoft Write (or more commonly known as "Microsoft Wrong") was a MS product --- the problem was that its was BAD software (even by Microsoft standards). About the only way that Atari could help promote it was to give it away for free by bundling it with its systems in the late 80's.

As an Atari dealer, I found it much less aggrevating to REMOVE it, throw it in the trash can and substitute Word Writer in the bundle before delivering new systems to buyers. There's nothing worse than delivering a new Atari system to a customer and then having to try to explain why he or she couldn't get the bundled software to work properly and have face needless hours of total frustration.

Atarians didn't buy their systems to have to face that kind of aggrevation. We EXPECT our systems and software to install and work easily and properly WITHOUT having to read exhaustive manuals, 'made-easy' books, or undergo hours of needless frustration.

Most ANYTHING would be a better choice for word processing than Microsoft Wrong!

Sheldon (Computer STudio - Asheville, NC)

hi, Well mint.prg in your auto DOESN"T make your aes to mulititask,
but only add some extension and adds the possibility to mulititask
ttp etc.
If you want tp have the GEM multitasking (which everyone does) you
need a mulititasking AES/GEM. Such as Mulititos (shuold be bundled
with falcon disks, or on the net), geneva, xaaes, oaasism, Naes.
That's all,. that just means that you installed a 1/10th of a package,
so of course, it won't work as you expect.
Bye.

A standard modem cable SHOULD work perfectly. Make certain that you don't have a null-modem cable instead of a normal modem cable (a null-modem cable crosses pins 2 and 3 to direct connect 2 computers together for file transfers). Make certain that your modem software is properly configured and you've selected the proper modem port in your software.

Dave,

Gosh.... now THERE's a voice from the past!! And coming out of retirement to retire again. Some of us haven't even been able to retire for the first time, although I must admit that dealing with Atari for all these years has often made me WANT to retire!

Anyway, great to hear from you again and best of luck in your re-retiring!!

Right. But it's installed here for... I don't recall ;-) 'cause it's
usefull for other stuff than Internet. Semper... you know this one.

> thought a STiNG install wizard would be the most useful tool at this time.

Well, I didn't wanted to tell it wouldn't be usefull. Just telling that
STinG is not so difficult to install IMHO.

I should add that I don't like install programs writing by themselves in
the auto folder (I'm parano ;-)) or overwrite older versions. I _usually_
prefer the old good manual installation... but it's only my own choice.

Bye,
/Pascal/

4537. Getting a Falcon, What mods should I do?

Newsgroup: comp.sys.atari.st
Date: 1998-03-06 00:00:00 UTC
From: kws@Radix.Net
Message-ID: <6dpiov$s59$1@news1.Radix.Net>
Source record: 106281

I'm getting an Atari Falcon I purchased from a person in this newsgroup. All he has done to the machine is put in a 68882 (unknown speed) and use a Screen Blaster with it. What else needs to be down to it, and what mods are recommended?

I remember seeing mention of a buffer fix of some type, will I need to do this or how will I know?

Also, I'm interested in 'boosting' the speed of it, should I get a Nemesis, or try some of the mods myself? I remember seeing a mod where the clock was increased to 36 Mhz, and also a mod were the sound output was enhanced (looked to complex for me!).

What i am looking for is speed for running Linux, but compatibility under TOS. An afterburner is out of my price range..... at least right now....

4538. Where is GCC 2.7+?

Newsgroup: comp.sys.atari.st
Date: 1998-03-06 00:00:00 UTC
From: Blair Dean <blair_dean@inet.hwc.ca>

The Z85230 has an 8 character buffer on-chip, which can be used to allow
higher serial port speeds without overloading the CPU. Regular 8530s don't
have this buffer, and the SCC.PRG driver doesn't know about it. The ESCC.PRG
driver is supposed to use the buffer. It's probably no big deal, but it
would certainly be nice for MiNTnet if it worked.

Yes. Peter West has done a translation. He is waiting to clear up some
'contractual' points with the author before release.

I prefer the manual install myself. You have a much better idea what is
going on. That's onw of the real problems with Windows, all kinds of
stuff hidden away Gates knows where. You try to "uninstall" something and
it leaves big chunks of itself clogging things up, something else installs
over part of something you were still using, a big mess. On the other
hand, a Wizard is the onyl way we are going to get some Atari users onto
the web. They just don't want the trouble and terror of the manual
install.

I have a selection of Atari ST titles for sale.

This List Updated 6/3/1998.

email: steve@steverosie.demon.co.uk

I'm looking out for the following, possible swap, part exchange etc...
Atari CD ROMS, 16-bit sampler cartridge/hardware etc...

All are on original media. I may be interested in part exchange/swap W.H.Y.

Key:
ds = double sided disks
ss = single sided disks
?d = number of disks
meg = one meg of memory or more needed
ni = no instructions
nb = no box
NSTE = Not STE compatable

Please Note The Key Codes Are Only There For Guidance, I cannot be
responsable for in accuracies.

>>>>>>>>>> All prices are in UK Pounds (sterling) <<<<<<<<<<
^^^

Prices DO NOT include postage.

Yes, POOR GUY! Thats right he was calling himself Phreakster. I am calling him an ignorant (STUPID) thief. You tell me if it wasn't warez he had his paws on? You have a promising field as a defense lawyer. Of course they lose more cases than they win. But someone needs to defend these POOR GUYS who come to comp.sys for help.

Wait a minute you are right not me. I should be helpful and say, for technical support on your warez go to the **** BBS. Or go down into the sewer and see if they are there?

I don't think so.

I am glad you have contacted him and sent him all the information he has requested? Your post here was unnecessary.

OK, like many of us fragmented users, we have missed out on developement of
the last 5 years.

Mint will do it, but it doesn't sound like it is for you.

Look into get Magic 5.x

or the

GENEVA/NEODESK combination.

These will let you do what you want. Multi task Gem programs.

They work very well.

> not put spaces between the reference entries either.

Well, I was just quoting from memory the still actual rfc 1036. Here are
the exact words:

[rfc1036 on]

RFC 1036 Standard for USENET Messages December 1987

2.2.5. References

.../...
angle brackets). If the original message does have a "References"
line, the follow-up message should have a "References" line
containing the text of the original "References" line, a blank, and
the Message-ID of the original message.
.../...

[rfc1036 off]

Note that I used the word 'should' and not 'must'.
I know that son-of-rfc1036 sometimes says different things, but the
rfc_1036 is still THE reference, isn't it ?

Bye,
/Pascal/

HARDWARE (no manuals or software)

1.1040STf 1MB ram. TOS 1.4 This machine has an audio output jack (RCA female) so you
can plug in to your external amplifier. Listen to the robot voice or your games loud!! No need for a
pre-amp. Will go with its famous BEETLE mouse!. $65

2. 1040STf TOS 1.0 1 MB RAM No mouse. $ 35. Runs great.

2. Intel External 144e (14.4Kb) FAX/MODEM with cable for Atari or pc. $25.
(has original PC software)

5. SC 1224 color monitor. It needs detachable video cable $16 (I can give you one that needs
a connector at the other end (free).

6 . 5. SC 1224 color monitor. with non detachable video cable and power cable. works great. $25

SOFTWARE:

1. TRUE PAINT V 1.02 $15 Excellent drawing program; all resolutions and colors. Works in ALL
ataris. From B/W. to true color. Manual available.

2. ICD hard disk utilities Version: 6.2.3 2 disks no manual $10. I will send a list of the files upon request.

3. PHOTO SHOW 1.0 by It's all relative: Create multimedia presentations audio video; Also watch
kodak photo Cd's in PCD format. This prg. will go with PCD sampler vol CD-ROM $15 (Falcon).
Needs Multitos.

All OBO. Questions welcomed. If interested send ZIP code to ask UPS for charges.. For software I can send it for $3.00 US. (If you are in the US; I am willing to send abroad also). Phil.

4559. Mega STe For Sale (USA or Canadian buyers)

>> the Spin package?
>
>Nope, it's in the Metados package. Fear not, I'll mail you a copy.

Thanks Roger,
I've installed it and I'm pleased to say that I'm not
getting the warnings Re 'Device not receiving any data' any more.
But for some obscure reason the CD is still being ejected
immediately after being inserted. The question is as to whether
this is software related or more to do with the CD hardware.

My CONFIG.SYS is as follows

; Beispielkonfiguration f�r SPIN!

; CD-ROMs auf SCSI 1 (4 + 1 = 5) und ACSI 5
*BOS, c:\auto\spin_sd.bos, A:5

; als logische Laufwerke S: und T: installieren
*DOS, c:\auto\iso9660f.dos, Z:A

Thanks to your suggestion as well Ken. If I don't get any further
with Spin that will be the next line of attack.

Best regards

Not for the ST, but for the Falcon. Reservoir Gods makes emulated
Gameboy games, and is also working on NES games (Super Mario is the
only one available yet).

>Were any of the computer emulators for the ST actually good enough to be
>of practical use? The Mac and PC ones would probably be the best of the
>lot. I'd imagine that they ran at full speed (I heard the Mac emulator
>actually ran faster than the Mac it emulated).

For older Mac emulation, Spectre GCR was said to run very nicely, but
I never tried it. For the Falcon, there was SoftPC, which emulated an
OLD 8088 PC, and there was Falcon Speed, which emulated a 286. I heard
a rumor from someone who said that it was possible to swap the 286 on
the card for a Cyrex 486. For newer TOS systems (Hades, DirecT40/60,
etc.) there's supposed to be a Pentium card that would literally turn
the machine into a PC-compatible at full Pentium speed. I'm speaking
in rumors and hearsay, not experience, so if anyone has anything to
add or dispute, go ahead! :)

There was a good article on Atari's history in one of the mainstream computer magazines a year or so ago that talked about that fact in more detail (sorry, I can't remember which magazine it was, but I probably still have a copy of it at the office somewhere if anyone's interested). From what I remember, Microsoft couldn't produce a Windows OS within the timeframe Atari required for introduction of the ST. Microsoft wanted a year or so for development, while GEM was essentially ready to go. And, at that time, the Tramiels were anxious to produce a new system to help revive the company they had just taken over and take it back from the ashes of its former glory.

MagiCMac is sold by ASH in Germany (http://members.aol.com/ashinfo/). I think System Solutions sells it in the UK. But have a look at the web page of ASH (there is an English section).

NoSTalgia can be downloaded from http://users.skynet.be/sky39147/) - now with hard disk support.

Better yet -- I'll give Ken a 'good character' reference right now! I've had very pleasant dealings with him for several years -- he's one of the Atari good guys. ;-)

NEWSie's FTP doesn't like the latest STinG. I can't even get a
site's directory listing now. However, AFTP works fine.

> article <g>.

If you recall the reason for including more than one reference, then you'll
find that it does not make any sense. The reason is that on Usenet, sometimes
a reply to some original article arrives first. Now a threading reader can
built a proper thread only, if not just the mentioned original article is
"referenced", but also the one before, because the original to the reply is
not there yet to provide *that* link. This of course does not work if only
the first and the last reference is included. It should be the last and the
second-last (and maybe the third-last ...) that is included.

>>Does NEWSie have a problem with entries larger than 50 characters ? Why is

The Usenet standard here is somthing close to 500 characters !

4571. Looking for FTP program which works

Newsgroup: comp.sys.atari.st
Date: 1998-03-07 00:00:00 UTC
From: greg_evans@delphi.com
Message-ID: <xRXoQeK.greg_evans@delphi.com>
Source record: 106165

I have yet to find an FTP program which works consistently. MG-FTP goes through the logon proecdure then executes an abort command and loses the connection. Newsie almost always retrieves a blank directory window. If I upload a file it either pauses part-way through the upload or completes it but when Ido get a directory window the size is 0 bytes.

Help!

Greg

4575. Help improving STinG Performance

Newsgroup: comp.sys.atari.st
Date: 1998-03-07 00:00:00 UTC
From: jperez@Hawaii.Edu
Message-ID: <6dq2ma$gi2@news.Hawaii.Edu>
Source record: 106208
Cross-posted to: comp.sys.atari.st,comp.sys.atari.st.tech

Greetings,

I have recently installed the latest STinG package, including HSMODEM7, the new STinG modules, serial CPX, etc... On my 48mhz TT, I am getting terrible network performance, about 1/6th of the speed of a Zmodem transfer of the same file. A 100k file takes 20 seconds with Stalker/Zmodem while it takes over 120 seconds with STinG and MGftp. I expected some performance degradation due the the networking code, but this seems excessive. I will be testing a faster modem today, but I assume that it will still perform much below capacity.

I have experimented with different buffer size settings in HSMODEM, as well as networking settings (for MSS, MTU, RWIN, etc...) - nothing seems to make much of a difference.

Does anyone have any recommendations? I have to believe that this is all due to some configuration problem, and would greatly appreciate some help.

Thanks!

Aloha,

I'm considering adding a Zip drive to my 1040STE, which I currently run with only a floppy drive. Wkat I would like to know is if I get a SCSI adapter such as the ICD Link 2 will I still need to boot with a floppy in order to get the Zip drive to function or will I be able to boot with a Zip disk?

4585. Programming the Atari 2600 with an Atari ST

Newsgroup: comp.sys.atari.st
Date: 1998-03-07 00:00:00 UTC
From: ad329@james.hwcn.org
Message-ID: <6dqtr4$epj@james.hwcn.org>
Source record: 106218

No doubt many of you Atari ST enthusiast remember the old Atari 2600 VCS.
If you're like me it was probably the first video game system you ever
had.

I may suprise some of you to know that there are still people out there
who collect for and play these old machines and it may suprise some of
you even more that there are people who actually write new programmes
for this machine (even producing them on cartridges, of course they're
Eprom based instead of Rom).

The easiest method to write new games for the Atari 2600 is to use the
Starpath Supercharger. It's a device that plugged into the cartridge
port of the Atari 2600 and then had a plug that went into a cassette deck.

Currently there are Atari 2600 development platforms on almost every
computer except, ironically enough, the Atari computers.

You can find 2600 development tools for:

The C-64 (Playbin.prg - a programme that takes binary files and turns
them into audio for the Supercharger Tapes)

The Apple][(This was the machine used to originally develope Supercharger
games for the 2600. As with the C-64, the bulk of the work
is just done with whatever 6502 assembler you like. But with
the Apple][, no special programme was needed to save the
programme to cassette tape since the Supercharger uses the
same tape format as the Apple][)

The Amiga (Distella - a programme that disassembles 2600 BINary files
DASM - a 6502 assembler
Make Wav - a programme that turns 2600 BINs into WAVs to
be played to the Supercharger
Cheetah - similar to Make Wav, but allows you to enter game
codes before playing.)

The Macintosh (Bin2tape - A programme that turns 2600 BINs into WAVs for
playing into the Supercharger)

The PC (Distella, DASM, Make Wav, Cheetah and
Win PlayBin - a programme that turns 2600 BINs directly into
audio to be played into a Superchrager through
your sound card, or recorded onto cassette tape)

I've been using my PC to develope new games for the old Atari 2600 and
have no complaints about the development system, but it just strikes
me as odd that there isn't a development system for at least one

Atari computer. The development tools for the 2600 are all public domain and the source codes for many of them are available on Bob Colbert's Atari 2600 programming webpage.

http://www.novia.net/~rcolbert/

Bob wrote or ported many of the PC and Amiga development tools. And is currently working on a visual 2600 development system for Windows 95.

Anyways, I was wondering if there happened to be any ambitious Atari ST programmers here who would also like to write games for the Atari 2600 (It's a 6507 processor, almost the same as a 6502. It's also an extremely challenging machine to write for) and would be interested in porting the development tools over to the Atari ST platform.

One of the biggest advantages the PC and Mac 2600 developers have is working Atari 2600 emulators on their machines. But a 2600 emulator would likely be beyond the capabilities of any of the atari machines.

If you're interested in learning to programme the Atari 2600 there are two mailing lists...

stella@biglist.com (an Atari 2600 only programming E-mail List)
gametech@rbkc.gov.uk (an E-mail list for programming all classic machines)

and two newsgroups

rec.games.video.classic
alt.atari.2600.programming (this is a new group)

I hope there are some Atari ST users/programmers out there who also have an interest in developing new games for the old Atari 2600.

It seems now adays the way to show off the power of your computer is to make it emulate an older machine. It's kind of ironic that it takes a big kick-ass computer to emulate an old machine like the Atari 2600 or the Vectrex. I've seen emulators for everything from the 2600 to the Sony Playstation on the PC and Mac.

But I was wondering what emulators there are on the Atari ST?

I remember there was an Apple][emulator that ran on a monochrome ST. It was odd because it actually drew a picture of an Apple][on the screen and what you typed showed up on it's monitor.

There was the atari 8-bit emulator too, but I found it to be too slow to be of much practical use (were faster versions ever made?).

And I've seen a few C-64 emulators for it too, but not one of them has ever worked. There was one that ran in medium rez (which was odd) and didn't do much at all and a german one that ran in low rez, did more, but still wouldn't run any C-64 software. Was there ever a real, working C-64 emulator for the ST?

I've also heard rumours of a Timex/Sinclair emulator for the ST, but I've never seen one.

And of course there were the Mac emulators, both on hardware and on software.

And there were also PC emulators on hardware for the ST, but I think the highest one was a 286 emulator (I saw an ad for a 386 card for the ST, but I was told it never went into production).

Were only computer emulators ever made for the ST? Were any console emulators made? I can understand that the Vectrex and 2600 emulators would probably be beyond the ST's abilities to emulate, but what about other machines like the NES or SMS or Gameboy?

Were any of the computer emulators for the ST actually good enough to be of practical use? The Mac and PC ones would probably be the best of the lot. I'd imagine that they ran at full speed (I heard the Mac emulator actually ran faster than the Mac it emulated).

CRACKERS
(Emulation from hell!!!!!!)

What planet did that happen on? What history are you reading? I'm pretty sure
GEM on the Atari was out a few years before Windows on the PC.

Happy Festivus,
Dave

Hello

I use Newsie with Sting to upload files at Mygale.
I have the last version of modules.

I have some problems:
- when newsie connect ftp.mygale.org, It doesn't retrieve
all files. The last files is lost.
- when I create a new directory, I can see it but when
I go into it, Newsie shows me nothing and I can't go up.

Someone have these problems ?

4592. TAF Meeting March 18th - SCSI drives!

Newsgroup: comp.sys.atari.st
Date: 1998-03-07 00:00:00 UTC
From: dreibel@idirect.com
Message-ID: <350145a8.0@diana.idirect.com>
Source record: 106225

Agenda for the March 1998 TAF meeting:

As with any computer, storage of your ideas, as well as having media for quick and handy access to your your most-used programs and files, is a must for efficiency and time. And now, thanks to lower prices and improved technology, even the oldest classic Atari computers can take advantage!

At the March 18th TAF meeting our focus will be how to build your own SCSI-based hard drive in a PC case - we'll show you the parts and software you need, where to find them, and how to configure and put it all together. We'll also discuss the variety of options to hook up to your new SCSI system, including CD-ROM (did you know that at last count there are over 50 Atari-specific CDs to choose from?), removable media like ZIP and Syquest drives, tape streamer drives, and even flatbed scanners!

If you're still booting from floppies, your original Atari-specific hard drive is wearing out, or have ever been curious about how a hard drive system can give your classic Atari improved usability, this meeting is not to be missed! See you there!

TORONTO ATARI FEDERATION User Group meetings are held on the Third Wednesday of the Month in the North York Memorial Community Hall on the Lower (or Concourse) Level of the North York City Centre Library at 5110 Yonge St. at Parkhome Ave. Parking garage inside the complex. Those using public transport can take the TTC's Yonge-University-Spadina line to North York Centre Station. Meetings start 7:30 PM, $2.00 to non-members. Membership is $35 CDN a year, and includes a subscription to the club newsletter PHOENIX and full use of the TAF Online BBS. A membership in TAF IS Atari support!

4593. Possible June TAF Flea Market?

Newsgroup: comp.sys.atari.st
Date: 1998-03-07 00:00:00 UTC
From: dreibel@idirect.com
Message-ID: <350145b2.0@diana.idirect.com>
Source record: 106226

just testing the waters:

recently the TAF Executive have been talking about the possibility of doing another Flea Market tentatively set for sometime in June, and most likely set for a full Saturday, as opposed to just a few hours on a weeknight, at our usual place where we have our meetings: we feel that this will give more people who weren't able to come on a weeknight to come in and have a chance to sell or to find needed Atari hardware and software.

Although we're not planning it to be as elaborate as our previous ACE presentations, I wouldn't mind seeing a few dealers and developers show up for this as well so they can bring in some of the newer developments for sale to those who'd like to keep up-to-date on what is out there for the classic Atari.

If you're interested, or want to give a few suggestions, or have other questions, feel free to contact me at the e-mail address listed below. We'll probably have some more cohesive news up within the next month.

There is a version of Cubase Audio for the ST, but you need some extra
hardware; Yamaha CBX-5 or whatever it is called.

> the clock was increased to 36 Mhz, and also a mod were the sound output
> was enhanced (looked to complex for me!).

It is quite easy to boost the DSP and the 68882 - just connect another
oscillator.. But the CPU is a bit harder.
I�ve tried the 36Mhz mod, but as the frequency is devided by 2 _before_ the
CPU, it only gives you 18 Mhz. It also involves some tricky stuff to get
the keyboard / Midi working after the "boost"... But if you have fast
memorychips (60ns) you can change oscillator from 36 to 50Mhz and get a
25Mhz CPU! I connected a couple of extra wires to the DSP and the FPU and
VIDEL and it works great. Just like a "homebrew" nemesis or something..
The buffer modification is a must. My falcon was _very_ unstable before
that..
If you think you can do it - boost the machine yourself. Or buy a Nemesis..
(Either way you�ll need fast memorychips (60ns, at least 70ns))

Good luck!

/Peter

My version of Straight Fax will not work with any other modem software
loaded (except HSMODEM). I've disabled Sting, XControl (because it
has the serial port setter), and the Sting Dialer.

My version will also not work at speeds faster than 9600.

For Sale

Falcon030
14 MB RAM
1.44 MB floppy
IDE hard drive ~90 meg
Buncha extra digital and audio chips
Socket for math co-processor
Super VGA: 640 x 480, 256 colors; True Color, up to 65,536 colors
$390 or best reasonable offer (incl. All Things Falcon CD-ROM)

Philips 1557AS Fast Refresh/15 EVGA with tilt/turn pedestal
Can display up to 1024 x 768 pixels @ non-interlaced 70 Hz refresh
Can accept output from CD-ROM, sound boards, etc., via stereo inputs
Headphone jack and volume control on front
Built-in twin speakers
Full set of H-size, H-shift, V-size, V-shift, contrast, and
brightness controls on front
Excellent mate for the Falcon030
$150 or best reasonable offer

$525 for the package or best reasonable offer.

(Could include NEC MultiSpin 3Xp CD-ROM reader and Extendos for
appropriate extra amount.)

You pay shipping.

Can supply character references (longtime Genie Atarian), and hope buyer
can, too.

Send e-mail or call (313) 821-5706.

Ken Van Dellen

I'm in Grosse Pointe Park, MI, about 5 mi. NE of Windsor, ON, and would be
happy to meet a Canadian buyer in Windsor, London, etc., for a cash sale.

Here's what's left. Best offer for entire lot or individual items!

These items are from our home and business -- things we don't
really need that occupy valuable and shrinking space. Since we're not
a retailer or distributor, there is only one of each item unless
otherwise noted. First Come -- First Served.

Hardware

1......1040 ST (with Best Mouse & custom vinyl dust cover)
1......SC-1224 Color Monitor (with custom vinyl dust cover)
1......SM-124 Monochrome Monitor (with custom vinyl dust cover)
1......SM-124 Monochrome Monitor (no dust cover)
1......Diverse Data MFD-1080 External Dual Floppy System (3.5
ss/dd & 5.25 ds/dd) & cable
1......Navarrone TimeKeeper (external clock/calendar)
1......IMG Scan monochrome scanner to fit dot-matrix printer head
1......ST Video Digitizer (monochrome with composite video input
jack)
1......Magic Sac Professional (hardware & software Macintosh
emulator with Macintosh ROMs and Translator One hardware for reading &
writing Mac disks)

Software

1......PC-Ditto (IBM PC-DOS software emulator)
1......WordPerfect 4.x (word processor)
1......SuperBase Personal (database)
1......Publishing Partner (dtp/page layout)
1......PageStream (dtp/page layout)
1......PageStream Font Set
1......UltraScript (PostScript interpreter)
1......UltraScript PS-35 (PostScript 35 font set)
1......UltraScript ITC New Baskerville (PS type 1 font)
1......UltraScript Eurostile (PS type 1 font)
1......UltraScript Optima (PS type 1 font)
1......UltraScript Univers (PS type 1 font)
1......CyberStudio (CAD software with CAD-3D 2.0; Cybermate
animation; & picture disk)
1......Migraph Supercharger (raster graphics)
1......Migraph Touch-Up (raster graphics)
1......Easy Draw & Easy Tools (drawing)
1......D BASIC (programming language)
1......Typing Tutor

1......Write 90 (wp utility)
1......Thunder (spelling checker)
1......Spell & Writersï¿½ Tools (spelling & document checker)

I'm using a USR 33.6 haven't upgraded it yet so I'm REAL interested
in your results.

For this modem, using the latest STFax:

1) Modem/Fax Modem Type = Type 1
2) Modem/Init String = AT&H3&I2&R2S7=90

I believe the Init String came from a post by Charles Smelton way
back when...

Hope this helps AND you get it to work.

Pat

Find it difficult scanning straight and keeping the document in place
when using a hand scanner? Then you need, Scanner and Mouse Pad with
'keep scanner straight' thingimajig.

The scanner pad (doubles up as mouse mat) is a large (more than easily

accomodates A4 size paper) pad which had a clear plastic sheet
attached under which yu place your document. Place the straight 'rule'
on top to hold down the document and to guide the scanner in a
straight line.

Want one? Well, I only have one - so contact me ASAP to reserve it.

ADI Maths (ages 12/13)

My sister used these for a while when she was 12...

Make me an offer in UKP.

Regards
Danny

Anyone interested in buying the following mags from me?

ST Review Magazines
With Disks (without - 33)
5, 7, 7, 21, 26, 27, 28, 29, 30, 30, 31, 32, 34, 35

ST User
Ranging from Volume 1 issue 1, to the last but one issue October 94.
Around 72 mags in total, including all cover disks where applicable.

ST World
All issues (even the ones from before it was called ST World)

I am contemplating selling my full sets of ST Applications, ST Revieww

and ST Formats - dunno yet - but make me a good offer and they will
probably be yours. ;)

Collection from Essex, London or manchester - otherwise a hefty
postage charge.

| . . .

Sorry Bob, I didn't get your mail and I missed reading the newsgroup for several days as I was trying to get the latest STiNG to work and couldn't. If you want to convert from *.STX to *.RTF (and then import to your PC word-processor) then Papyrus is the best. This method should retain your fonts, text effects etc. If a simple conversion of *.STX to ASCII is all you want (and you don't have Papyrus) then Script will do.

> Well, I couldn't find TelStar v0.8. I did try Boris Cahan's TelNet v1.01/1.02

That's unfortunate, Boris's Telnet is of no help here. I must be sure that
the test application does not use any of the wait calls (TCP_wait_ack() or
TCP_wait_state()).

> you know where I can get your earlier version, I'll try that. Ahhh, I was
> able to ping 130.75.75.17 with no dropped packets at all. Cahan's stuff does

That's interesting, so obviously the kernel and the low level driver work
well. So it must be either TCP.STX or RESOLVE.STX what causes the problem.

Cheers Peter

This is usually bad advice unless Charles has exactly the same brand and
model of the modem, as the meaning of the S registers is very dependent
on the modem.

Sure, but think about a long thread were replies to replies to replies etc.
are posted. If this rule were followed strictly, the "Reference:" line would
get longer and longer, and very soon exceed the 500 characters limit for
NNTP command lines (which is in the same RFC). So before that happens, the
line must get shortened in some sensible way. Given the purpose of this line,
the proper way is to keep recent entries, and discard early ones.

Hello everyone,

I've have a game I wrote in STOS that is practically finished (I have 10% to go) except that my version on the compiler will not compile the Ninja Tracker code correctly. I was wondering if anyone (Tony?) who has the latest version of the compiler could send it to me?

When I'm finished with the game, I'm planning to release it as freeware (like I could get any money out of it anyway...) I just want to finish this thing which has been on my conscience for a long time (almost 2 years)!

Thanks,

Greg George

New at Systems For Tomorrow March, 9th 1998
~~~~~~~~~~~~~~~~~~~~~~~~~~

Ultimate Virus Killer 2000 for TOS Computers $19.99
The Ultimate Virus Killer 2000 (version 8) is probably the most versatile and definitive product in the battle against computer viruses on the Atari ST/STE/TT/Falcon; a full- fledged tool that has taken many years of painstaking development. You can use this tool to de-infect your disks and programmes, destroying the viruses and leaving all other information and data intact. UCK2000 will recognize and destroy over 100 viruses! The full version is only $19.99, upgrades from any previous version are only $7.50. To upgrade you must return your origional disk and payment to: SFT - PO Box 3034 - Independence MO 64055 - USA.

Atari Computing Magazine #8 $9.99
In this issue: Reviews of Thing 1.2, jinnee, Zero X, MagiC 5, Running and more. Tutorials for STOS, Papyrus, HiSoft BASIC. All the regular features and the return of CyberSTrider. Includes Reader Disk. From Renegade Publishing. Note: We also have a limited quantity of #7 in Stock. Issues 4-6 are available for special order.

Atari Computing Subscriptions
In addition to our standing order option, we are now accepting 3 and 6 issue subscriptions to Atari Computing. Here's the deal: (Prices include Reader Disk and delivery to US or Canada.)
Standing Order: $11 per issue (must have a credit card)
3 Issue Subscription: $30
6 Issue Subscription: $55

Suzy B's Treasury Vol 2 CD $29.99
This CD from Suzy B Software continues the tradition of bringing you "a honey of a deal." It includes the best in Atari PD and Shareware, all clearly described by "The Unabashed Atariophile" of Z*Net, AEO and ST Report fame. It's been three years since the first collection and thousands of new files have arrived. Most files are compressed in ZIP format in order to fit more data onto the CD. We also have received more copies of the origional Suzy B's two CD set, now also priced at $29.99. From Suzy B's Software.

Link 97 for ST/STe/TT $89.99
Easly connect harddisks, CD ROM drives, streamers etc. to your DMA port. Technical features: SCSI 2 Commands (Harddisks above 1 GB can be used), Parity, SCSI Initator Identification (Harddisks like
~~~~~~~~~~~~~~~~~~~~~~~~~~

the Quantum Fireball series can be used), You can connect up to 7 SCSI devices. Note: Does not include driver software. From WB Systemtechnik.

DTP+G Desktop Publishing CD $39.99
A desktop publisher's dream! This CD contains over 3,600 fonts in Calamus, True Type, Postscript, GDOS, Signum, and other formats. It has over 8,000 pieces of clip art as well as DTP support programs, printer drivers, word processors, font editors, CAD software, printer utilities, and more. Over 90% of this CD is in English! It also includes four commercial packages: Family Roots I, DegasArt, Edith Pro, and X-Lator. From Floppyshop.

Scan X: UMAX for TOS Computers $49.99
This new edition of the Scan X scanner drivers provides support for the UMAX Astra 1200s and VISTA S-12 scanners. A MicroTek E3/E6/35T+ version is also available. From Homa Systems.

Electronic Cow!
Three cool music applications! For more information check out the Electronic Cow link on our web site!

MIDI Arpeggiator for TOS Computers $27.99
Sound Chip Synth for TOS Computers $19.99
Snippit Synth for TOS Computers $29.99

Also Available:
HD Driver 7 $49.99 The best Hard Disk utilities
CAB 2.5 $49.99 HTML browser /w PPP socket for MagiC
Atari Works $79.99 Easy to use home/office suite.
Lattice C 5.6 $139.99 C Compiler.
True Image $29.99 Image Processing Package.
Alien Thing (Expert) $19.99 Alien Blasting fun!
Tetris II $11.99 Cool Tetris game
Power Up $19.99 Racing fun for ST/STe/TT/Falcon
Desktop Solitaire $19.99 8 solitaire card games for TT/Falcon
Face Value $69.99 Visual style GFA programming
All Things Falcon CD $9.99 Tons of Falcon PD/Shareware on CD
Hard Disk Sentry $39.99 Optimize that Hard Drive
Photo Show Falcon $9.99 View Photo CD discs on the Falcon
Card File 4 $29.99 Personal Information Manager
Moving Pixels CD $29.99 Software Collection /w sources on CD
ESG Clipart CD $19.99 IMG, CVG and GEM/s clipart on CD
True Paint $19.99 GEM based paint package
Plus about 400 additional products for your TOS Computer!

BDC> Atari system. What am i doing wrong, or do i misunderstand it?

Hi Boris,

AFAIK SoftPC boots from drive C as long as the regular files and directories
are there. BTW, be sure your floppydrive is empty when booting from HD!
Otherwise it will come up with some bad command msg.
I've got one version installed with a 10 and a 20 or 25 Mb disk, another one
with (I believe) a 5 and a 20 Mb drive. Look at the HDF files on your HD.

When you select the FSA drive (E) in the menu you can specify an Atari
partition or a folder for drive E. Save it in the config and it will be there
everytime you boot. I got a folder "DOSPART" somewhere as the regular one, but
I can even select my CD-ROM drive as E: and then start programs directly from
the CD-ROM.

What I'm wondering myself is, can you run SoftPC in any other rez than the CGA
mode it's doing now? I'd like to run it in EGA or even VGA. Could that be done
by replacing system files?

CU NeXT msg
Louis

>link. This of course does not work if only the first and the last
>reference is included. It should be the last and the second-last (and
>maybe the third-last ...) that is included.

OK, then NEWSie isn't doing the references correctly. Most of the time it is, but when the references encompass more than one line (like your posts) then only the first and last entries will be used (this post for example). Had knews 0.9.7 not formatted the original reference entries (each new line is indented with four spaces) then NEWSie would have included all of them. Confusing but true in my case <g>. Regardless of what is 'convention', NEWSie is inconsistent here, it being 'thrown off' by the formatted references that knews and a few other such clients generate.

To illustrate the formatting, below is your article's original reference header, exactly as it came in from the news server:

References: <6ckv6cmoi1@ash.ridgecrest.ca.us>
<EpCA70.Mpt@suse.modem.stud.uni-hannover.de>
<6domsu$1l5@thoth.portal.ca>

There are four spaces for the indents, with each line ending in a hard return. A NEWSie followup will only include those references on the first line -- the other lines are ignored. Of course the followup's other reference entry, the 'last' as it was called, will use the original article's Message-ID. Note that another knews user whose header I studied had tabs instead of spaces.

I can duplicate the proper references with a little cut-and-paste in NEWSie's installed editor (qed) to alter the followup's (newstest.txt) header, but I shouldn't have to do that. When NEWSie creates newstest.txt and passes it on to the installed editor, _all_ the references should go with it.

Other NEWSie users can easily test this by replying to an article that has formatted references -- see what ends up in newstest.txt. I'd be curious to know if others don't see the same as me.

From: akanthos@matrix.kapatel.gr
Message-ID: <6du806$4bj@lithos.kapatel.gr>
Source record: 106090

I'm waiting for N.AES since January, but it doesn't seem to appear.
I've ordered N.AES, then Woller & Link sent me a message telling that the
package was on it's way.
Can anyone help me out? I think that there is someone who lives near Woller
in Berlin.
Please make a contact! I sent Woller a message but there was no response.

akanthos@matrix.kapatel.gr

]-
]-Thanks,
]-
]-Michael White (michael@fastlane.net)
]-.

Hi Michael. CD-Recorder from Titan Design will do this, but it only will
support certain CDR models, and IMHO its a little expensive. (if you have
to have it though) :-)

You might want to wait a bit. Go check out Anodyne Systems Web page. They
make ExtenDos Pro, and Roger Burrows is working on a Gold version that will
support CD recorders for a fair price. Good luck! ;-)

Neil,

The documentation that came with ST FAX, v. 2.5, says "Straight FAX now supports Class 2.0 FAX Modems, such as the US Robotics Sportster FAX Modems..." The modem I have is a newer version of the Robotics modem, but I sure thought it would work, based on the documentation.

I haven't been able to make any sense out of this package at all ATM, even copying the .hdf file to the drive mentioned in the default config.

The installation dialogue seems to go in circles making it impossible to go into the menu bar to see if there's anything up there that needs tweaking.

Perhaps I'm misunderstanding how to install and run this program, so a beginner's step-by-step would be much appreciated! :-)

Agreed, especially if there's a clear idea of the required directory structure, not a problem with STinG! :-))

>over part of something you were still using, a big mess. On the other
>hand, a Wizard is the onyl way we are going to get some Atari users onto

From the messages that I've read here over the months it seems that most problems arise are due to the lack of reading the docs as to which of the components of STinG are required for on-line access so a clear notice of this would be a good thing.

Other than that it's the script that I found the most troublesome since I don't have a clear idea of what the settings mean - however it all works and (with a PPP connection) it seems that most of the actual settings are negotiated?

>I remember seeing mention of a buffer fix of some type, will I need to do
>this or how will I know?

I recommend that you go for a Nemesis, DMA patch and speed booster rolled
into one :-)

if you boost the memory over the standard then it's best to go for a single
SIMM of 60mS, Titan recommend the Panasonic.

>the clock was increased to 36 Mhz, and also a mod were the sound output
>was enhanced (looked to complex for me!).

I looked at this too but don't fancy trying to solder surface mount
components (one sneeze and they're gone), but I managed to install my own
Nemesis so I can't be that fumble-fingered! :-)

>What i am looking for is speed for running Linux, but compatibility under

I had a Reflex graphics card in my STFM, it was manufactured to fit the bus
on a MegaST but since that was nothing more than extensions of the processor
it could also be fitted to the ST with quite a lot of soldered wires!

>Anybody else seen this?

Yes (with AFTP). And downloads now won't work at all for me - AFTP
reports errors and Newsie doesn't report errors but saves truncated
files (ie it's not just directory listings that are being cut short,
it's file downloads too).

Peter is on the case: I've mailed him a session log today.

I'm having problems with AFTP with the latest STinG modules (see other thread), though it works very well with the previous ones except for uploads. It works fine with STiK on my STE (both uploads and downloads), by the way. It's by far the best FTP client I've tried for the Atari IMHO (also better than anything I've yet tried on a PC at work, for that matter).

>
>You need a Multisync monitor for this since there are different frequencies
>involved for mono and colour modes.

To be even more precise: You need a 1st generation Multisync monitor
(those only allowed horizontal frequencies from 15 to 3x kHz), e.g. the
NEC MultiSync, MultiSync II, MultiSync 3D, Acorn AKF15(?), Mitsubishi
EUM 1491A.

>You can find instructions on how to make a monitor switchbox for this at:
>
> ftp://ftp.sol.no/user/hallvart/atari/info/msync_ii.zip (7 Kbytes)

Some of these switches (those who switch automatically) only work with
ST/MegaST computers, not with STE/MegaSTE ones due to some change in
the monitor pinout, AFAIK.

And of course, there are used switch boxes available, I personally
prefer the heavy duty ones from TS Datensysteme (Germany).

Thanks Paul. I'm near Leicester, UK. So far the best suggestion seems to be that the full version of Papyrus will read STX files from Script. It isn't possible to tell from the demo, so that would be a bit of a shot in the dark. I have Pagestream 2.2b, but there's no import module for this WP. And the few conversion progs I've found don't do the job.

I'd be glad of more suggestions! I did have one offer of a copy of Script, but no reply to the e-mail yet. That would be my preferred option.

From: Bob Almond <revbob@globalnet.co.uk>
Message-ID: <6duhjk$q0j$2@heliodor.xara.net>
Source record: 106107

Bit of a cheek posting this I guess, but at least I'm trying to support the Atari platform! I'm using Tosbox (good emulator) with a P166MMX, 32Mb RAM, 4Gb HDD, Matrox Mystique 220 video card. And the emulation is excellent, until I try to go to 800x600 or bigger display, when the left edge of the screen is blanked - just about as far as the e in Desk. Otherwise no trouble, and it happens in all colour settings, from within Win95 or DOS. Anyone had similar problems?

Bob Almond

-> > Nemesis, or try some of the mods myself? I remember seeing a mod where
-> > the clock was increased to 36 Mhz, and also a mod were the sound output
-> > was enhanced (looked to complex for me!).

-> It is quite easy to boost the DSP and the 68882 - just connect another
-> oscillator.. But the CPU is a bit harder.
-> I�ve tried the 36Mhz mod, but as the frequency is devided by 2 _before_ the
-> CPU, it only gives you 18 Mhz. It also involves some tricky stuff to get
-> the keyboard / Midi working after the "boost"... But if you have fast
-> memorychips (60ns) you can change oscillator from 36 to 50Mhz and get a
-> 25Mhz CPU! I connected a couple of extra wires to the DSP and the FPU and
-> VIDEL and it works great. Just like a "homebrew" nemesis or something..
-> The buffer modification is a must. My falcon was _very_ unstable before
-> that..
-> If you think you can do it - boost the machine yourself. Or buy a Nemesis..
-> (Either way you�ll need fast memorychips (60ns, at least 70ns))

I recommend getting a Nemesis and fast memory. The reason is simple, it
comes with the buffer that you inquired about and also it allows you to
switch between CPU and etc. speeds giving more control over your
machine. Of course, you can install faster crystal oscillators in it
but some software won't work at the faster speed and thus you can switch
the Nemesis off and use normal BUS speeds.

Later,
James

: Arrgh I will pay for this smile also, seems that there's things not to joke
: around with anymore. I could be taken as a ASH spokesman, seems that is better
: to shut up and let others tell what Atari app should be used or not.

Sorry if you got a little burned in the heat of that mailer-linebreaks
issue. It probably did get a little out of hand. II hope you didn't take
it personally. I think there is an underlying feeling that ASH is
displaying a certain amount of arrogance that has people a little
frightened because they are also so dominant in the Atari software market
(even if everyone is also probably very grateful to ASH for the products
they do still release and support). I think those feeling may have
contributed some heat to what was also a frustrating topic because it was
just annoying to deal with e-mails that didn't easily display to be read
and followed-up on. Think of all the heat in exchanges over .sig lengths,
and realize that this was even worse as informationw as being lost
altogether sometimes.

Anyway, I look forward to visiting your website to learn about this new
mail program.

By the way, can someone contrast and compare N.AES to Geneva/Neodesk for me? I know both will allow for more comfortable use of MiNT, but I don't know how one or the other may be superiour in this regard.

Hi there!

It can be a bit difficult to keep up with what's happening in the Atari world. Not because there's so much going on, but because nobody lets you know about it.
To make it somewhat easier to keep track of what's going on out there, I've set up a "gossip corner" on my homepage. This is intended to be a place where we can all share news with each other. You can also see it as a place where you can advertise your homepage or maybe a program you've made, for free. This doesn't really matter as long as it's news.

Please visit the gossip corner and let us know about all the great things that are going on out there!

http://user.tninet.se/~jyc891w/gossip/

Does anyone know if there are any web sites which contain reviews from old issues of the sadly-missed ST FORMAT?

I am trying to find the review to a game which I wrote called 'Evilution'. It was, I believe, in 1992 and my company title was 'Nigma Adventures'

I have tried A3 but it doesn't seem to have updated since '96.

Thanks, Mark

>>

If you are in the UK and want a cheap Multisync Monitor there are a number of firms who are selling second hand Multisync monitors for about 50 UKPounds which will work with an ST / STE in both color and mono modes. I have one of these and it works ok ish The only real problem is that in mono mode the picture is only about 2/3rds the width of the screen.

Have a look in Micro Mart magazine for Willis Enterprises
(who I bought mine from) or Field Electric

well, i have dr-dos 7.02, from www.caldera.com. Its the dos made by
digital research. It comes as an .exe file, which can be downloaded onto a
PC, and self extracts into 6 720k floppies, which you can install onto a
hdf partition. It will also make a bootable floppy, from which the system
will boot. You MUST have a large enough .hdf disk for the system to unload
into.
In the distribution disk, is a c_disk.zip, that can be unpacked into a
1 meg hdf partition, but that is enough to start, but not enough to load
dr-dos.

I have a selection of Atari ST titles for sale.

This List Updated 6/3/1998.

email: steve@steverosie.demon.co.uk

I'm looking out for the following, possible swap, part exchange etc...
SCSI external CD-ROM drive, Atari CD ROMS, 16-bit sampler
cartridge/hardware etc...

All are on original media. I may be interested in part exchange/swap W.H.Y.

Key:
ds = double sided disks
ss = single sided disks
?d = number of disks
meg = one meg of memory or more needed
ni = no instructions
nb = no box
NSTE = Not STE compatable

Please Note The Key Codes Are Only There For Guidance, I cannot be
responsable for in accuracies.

>>>>>>>>>> All prices are in UK Pounds (sterling) <<<<<<<<<<
^^

Prices DO NOT include postage.

GAME COMPILATIONS

Hollywood Collection (5d,ni) 4
Ghostbuster II, Indiana Jones and the Last Crusade & Robocop
TNT (4d) 5
Xybots, Toobin, APB, Dragon Spirit and Hard Drivin'

I use a Syquest EZ135 with my STF on a Linc II. Worked great,
easy install. Only problem is with my TOS 1.0 which can't use
BigDos so I have a multitude of small partitions. I also use the
EZ135 on a MAC and a Doze mchn.with SCSI , each with their own
disk and the Linc allows me to chain other SCSI devices.

Pat,

Thanks for the suggestion--that string is one which is suggested in the
manual. It doesn't seem to work. The manual also suggests, in another
place, trying
AT&F1
That doesn't work either.

I've tried every combination of settings in straight fax that I can
think off.

are you using STiNG? If you are, I'm finding that A-FTP works
incredibly well and FAST; in fact, I use it as my FTP client for CAB
2.5. You'll find it on Flinny's STiK page as well as Mille's Channel
Atari (note that there's two versions, one for GEM under STiNG and one
for MinTNET). I'd never gotten it to work under STiK on my Falcon, but
maybe you'll be luckier than me :)

Hi Michael,

the German company Soundpool (http://www.soundpool.de) is selling such software.
It works with most common CDwriters and it is very good suported.
(all the updates with 'bugfixes' and 'improvements' are for free, to download from their website)
Actual version is 2.24

It cost about 160$ here in Europe..and that is a fair price i think for such software.

I don't know what the price would be in USA, but i guess you can order it directly in Gerrmany. (ask for englisch manual/version)

I use it with combination of HDdriver 7, Philips CDD2600 and Soundpool's AudioTracker / AudioMaster
wich does work well.
My next investment will be FAD interface, a 18bit DAC (2 INputs, and 8 OUTputs)

greetz Chris

PS . if this is a one time job, you maybe better search someone who already has a CDwriter in your area...

4691. The e-mail client Infitra

Newsgroup: comp.sys.atari.st
Date: 1998-03-08 00:00:00 UTC
From: atari@ebox.tninet.se
Message-ID: <6dtuj7qpl1@zingo.tninet.se>
Source record: 106183

Hi all!

I have edited (yes, with qed 4.10) a Infitra support page with contact links, snapshots etc of this graphical STiK/STinG compatible beauty. There's also info at there how to get it, and so on.
Surf to, yes http://surf.to/atari and choose the Infitra entry in the text.

I just succeded to config STinG with PPP properly now and must say that it really flies now (as PPP-Connect ;), arrgh I will pay for this smile. I found out as many of you, that it is no need to edit the STinG config files, everything goes straight forward, if you just use the in-built config settings dialogs, in both CPX:es as well as the dialer. I have only inserted some environment variables for other apps manually.

I don't know if it's the latest TCP.STX module for STinG but everything loads now without interuppts (my main 1997 STinG problem) both CAB downloads as well as mail and news. Someone once said (in 1997) that STiK loads faster and more stable, think that might be true last year, but now STinG works very realible on my system.

Think most of you will be able to read this text with correct linebreaks ;) Arrgh I will pay for this smile also, seems that there's things not to joke around with anymore. I could be taken as a ASH spokesman, seems that is better to shut up and let others tell what Atari app should be used or not.

ASH, yes ASH they sponsor this very editor I use now to edit this message, qed this common used PD app and makes it survive for a another year or two. Maybe this is wrong to?

Best Regards

Mille Babic

It's quite easy to make one of these yourself. I made an adaptor with a 37 pin Dway plug and socket, connect them back to back and pin for pin with the exception of pins 16, 17, 35 and 36 on the socket; these should be connected together and taken to the +ve of a regulated 5V supply. Connect the negative from the supply to pin 21 of plug or socket. This is at your own risk of course.

Then you only need turn the laser on when you print.

Did you have STinG disabled when you tried ST Fax, John? Doesn't ST Fax only work with certain modem chipsets (Rockwell for one)? My Logicode was lucky enough to have the Rockwell chipset, so everything worked fine right out of the box. I believe there's a little utility to check if your modem is ST Fax-friendly.

4697. Nemesis difficulty

Newsgroup: comp.sys.atari.st
Date: 1998-03-09 00:00:00 UTC
From: John Kolak <jkolak@jps.net>
Message-ID: <3504E075.BB6F5FDB@jps.net>
Source record: 105939

Hi,

I am in the middle of installing Nemesis, and am having trouble with it. I was hoping someone might be able to help.

I have installed the buffer and performed all the tests with everything okay up to page 17 in the manual. In starting the Nemesis installation with the Keyboard and MIDI patches, the machine fails to run properly at the boot up directed on page 22. The manual gives two options for failure: A persistent black screen, or the machine boots normally, but the mouse and keyboard are not responding properly. Neither description quite fits what is happening.

The machine does best on a cold boot up after the it has been left alone quite a long time, such as coming back to it for the first time the next day. After being on a minute or two, the behavior becomes worse and worse. First it will boot up all the way to the desktop. Once the mouse even worked right on the desktop, but usually the cursor will fly wildly across the screen when the mouse is moved. Then red lines will start to streak across the screen horizontally, becoming more numerous until the screen is quite full of them.

Then rebooting, the screen won't make it to the desktop again, but the boot process will stop on the desk manager (boot manager). Next time it won't make it to the desk manager, but will hang up on the memory test. Next time it won't even make it to the memory test, but will stop after the Fuji logo is displayed. Then the Fuji will start to break up, spreading apart vertically, and ghosts of it appearing to the right side of the screen. Other times that the boot sequence has started to display, it will hang up there, and that text will also break up and spread vertically. Other times colored vertical bars will flash to the right of the center of the screen. Interference seems to be the prime suspect, as when I move the yellow and gray wires attached to L102, the picture will either get worse in spreading out, or stabilize if I hold the wire just right. But even if the picture restores, the boot process still will not resume once it has stopped. I suspected damage to the keyboard chip due to the non-response from the keyboard and bizarre behavior of the mouse, but the manual suggests reversing the installation, and when I do that everything works okay again.

I've about decided my Falcon cannot take a Nemesis. I tried all the troubleshooting tips on additional grounds as suggested on pages 18,19,34, and 35. The only thing I haven't done is shorten the wires to minimum since the manual is somewhat contradictory in that it states that wires may have to be kept away from the memory card or CPU, and yet also asks for the wires to be short. If the wires are cut to absolute

minimum length, then there is no room for moving the wires to different routes, or moving the Nemesis card to different locations.

After reading page 34, "With so many differences in the Falcon it is impossible to say how each installation affects the various ones that exist," I am about to decide that my Falcon is one that cannot accept the Nemesis.

Any ideas?

Thanks,

-- John

rfc-1036 says page 2:

the close parenthesis) are not allowed. The Internet convention of
continuation header lines (beginning with a blank or tab) is
allowed.

Bye,
/Pascal/

In a message of Fri 6 Mar 98 Boris D. Cahan (2:281/202.0) wrote to All :
BDC> If any one can, could you:
BDC> 1) give me detailed instructions on what i may be doing wrong and
BDC> what to do right?

Hi Boris,

I just checked it out myself again and found the following:

When you got SoftPC running, go to the drive-menu and select a new one for D;
call this DRIVE32M.HDF or whatever you want. So select "create" and give the
drive its name and size. Next you'll have to reset and the drive will be
available then (check it in the menu).
You can't do anything with it yet, you simply go to DOS and start FDISK.
In its options select the "next drive" option, then select "create DOS
partition". After that the drive is accessible.

Then put all your systemfiles on it, alter config.sys and autoexec.bat to refer
to the new drive and finally edit your SoftPC.CFG to use this drive for C: and
another one for D etc.

I just created a 32Mb file, no problems at all! (Heck, I just lost 32Mb to this
bloody DOSbox again, but hey, this "drive" is faster in the can again than I
created it :-))

Good luck and
CU NeXT msg

On 8 Mar 1998, Thorsten Guenther wrote:

>RFC-1036.

I've just read this and what it says about USENET references:

It is permissible to not include the entire previous "References"
line if it is too long. An attempt should be made to include a
reasonable number of backwards references.

Nowhere in the RFC does it mention the references being on multiple lines. Like knews, UPoint-'medium' formats them this way (at least that's the way my news server gets them).

This means NEWSie is adhering to convention, and those other readers are not. To keep the references intact for this follow-up I had to cut-and-paste and then delete the original formatting (i.e. they're all on one line now). I do know some editors (like STeno) have trouble with very long lines, so I can see the point of formatting them. But doing this, as I interpret things, breaks USENET convention.

It is a combinatiopn of two suffixes. First, one must uae gzip (gnu zip?)
which will read it, and translate it into a .tar file.
depending on the gzip, It will probably REPLACE the tgz lile with a .tar
file. Then you use tar to untar it into a useable file.
Tar compresses it, and gzip turns it into a transmittable file.

4707. Base-64 decoder?

Newsgroup: comp.sys.atari.st
Date: 1998-03-09 00:00:00 UTC
From: kenkel@zetnet.co.uk
Message-ID: <6dvo8tidj1@irk.zetnet.co.uk>
Source record: 106016

From time to time, I receive files encoded in base-64. As far as I'm aware, none of the decoder programs I currently possess is able to decode these. I assume base-64 is a PC format and I wonder if anyone knows of a suitable program for the Atari STe, which could handle it. I don't know if this is similar to .exe files which I am also unable to decode (despite an earlier posting which suggested these could be handled as .zip or.lzh files).

Many thanks,
EDK,

The following software is for sale. The shipping will be prepaid on
orders of 5 or more packages (within the US).

Software with original disks and documentation:

Antic Software:
Star Struck the astrologer (will load and work from a hard drive)
Maps and Legends the Cartographer (only runs on old TOS)
Data Map Collection 1
CyberPaint (Pro Animation Studio) from Antic Publishing, Inc.

CAD-3D (version 1.0) [all 3 resolutions]
Human Design Disk (Requires CAD-3D)
Genesis - The Stereo Molecular Modeler (StereoTek Option)
Future Design Disk (Requires CAD-3D)
Fonts, Primitives, Hints and Tips (Requires CAD-3D version 1.0 or 2.0)
3D Developers disk for CAD-3D 2.0
Architectural Design Disk by Darrel Anderson (Requires CAD-3D)

Flash STO220 by Joe Chiazzese and Alan Page (telecommunication package) [medium and high resolution]

The New Technology coloring book (low resolution only and only works with the old TOS)

GFA Artist by Michtron
First CADD by Generic software

WANDERER by Pyramid Software includes two (red/green) stereo glasses.
1st Word with manual (versions 1.01 and 1.02)

Fahrenheit 451 by Ray Bradbury (Telarium)

HabaWriter (reported to be the worst word processor ever for the ST!) It ran properly on my system!

Thunder! spelling checker (Batteries Included) for word processors without a spelling checker. Works better than the spelling checker in 1st Word plus

Oo-Topos for Atari 520ST by Polarware (missing the ships map)
The Crimson Crown (further adventures in Transylvania (Polarware)
Temple of Apshai Trilogy by Epyx
TASS TIMES in Tonetown (Activision
Hacker II the Doomsday Papers (Activision)
Mercenary (Datasoft)
Silicon Dreams (Firebird)
Jewels of /Darkness (Firebird)
Flight Simulator II (Sub Logic) only runs from disk
Revolver (Intersect Software) load two or more programs on a 4 meg system.

Of course later versions came with Softlink - their own multitasking system,
which split the ST into a number of Virtual machines. The best thing about
it was that any running sequences (playing or recording) would carry on even
when you'd switched to another program. I used to do this to write lyrics
in 1st Word+ whilst listening to the music at the same time.

Once I needed to play back a sample in a song, and having no sampler, I
recorded it in 8 bit to play from the STe audio ports. I was then able to
set Replay to a different channel to my MIDI equipment, and by connecting
an extra lead from the first THRU to one of the Unitor INs, I was able to
play the sample from my sequence. I had to start the track playing, switch
sessions to the one running Replay, and ensure it was all patched correctly,
but it worked!

FWIW, Logic ran pretty well under MTOS (at least, as well as anything did
;) and I heard that quite a few people ran (run?) it under MagiC.

Cheers,

Xav

>have just got an old 520stfm how do i get the desktop software?
>can anybody help? also waht kind of harddrive does it take?

The Desktop software is built into the computer. Just turn it on and wait about 30 seconds. To do more requires ST applications and utilities. As for a hard drive, there are several that take the DMA port on the back and convert it into an MFM bus or a SCSI bus. These days, an ICD ADSCSI adapter to drive SCSI drives is popular. Plus you'll need a case, power, and the driver software.

From: rldetlefsen@delphi.com
Message-ID: <hZYqQOc.rldetlefsen@delphi.com>
Source record: 106025

I downloaded the JPEG 5 to GIF(and others) converter, but found it doesn't work. The command line isn't right, and when I finally get it accept something, it sits there, then spits garbage on the screen. I really don't want to have to fix this my self, but I'll dive into C if I have to.
Thanks,
Rick D.

4717. TOS & TTP

Newsgroup: comp.sys.atari.st
Date: 1998-03-09 00:00:00 UTC
From: rldetlefsen@delphi.com
Message-ID: <pbQqw+X.rldetlefsen@delphi.com>
Source record: 106026

I have an agravating problem. When I run TOS or TTP programs, they exit in
a very unfriendly way-dump back to the desktop. Not 'press a key to exit' or
anything. This is bad enough when a program ends normally, but when it prints
an error, or command list to the screen, I can't read it fast enough. Is there
a program that can be installed that all TOS and TTP programs can vector
through
that will provided this user friendliness the programmers left out?
Thanks,
Rick D.

There is a Sinclair ZX81 (my first computer!) emulator for the ST. There is
also at least one Sinclair Spectrum emulator, but that may be Falcon only.
Finally, there is my own QLem, which of course emulates the Sinclair QL.

Since the QL used a 68008, all code run natively under QLem. Even an ST
(QLem runs on the Falcon and possibly the TT as well) is a couple of
times faster than the original machine.

>Were any of the computer emulators for the ST actually good enough to be

QLem certainly is, IMHO. ;-)

A new version will be available soon (I've been saying that for half a
year or so now, but...). I just have to do a bit more work on fVDI first.

Hello Surfer's

Here's another Web site that gives CAB/CAB.OVL problems. While trying to get some info about my ZOOM K56Flex modem, the docs refered me to this "odd ball" Web site, http://www.modems.com (or www.modem.com)

What a puppy this is ;) I'd rather fight a Borg blindfolded than Surf this site again <g>. It's a simple site, no HTML problems, but it WILL crash CABv2.5/CAB.OVL or give a cache error to CABv1.5/CAB.OVL. Try any version of the OVL you have. What's up? Well, WenSuite v2.40 says "TCP/IP server doesn't respond". If you keep trying you will finally get to the Web Page which announces "You Made It", how quaint. If you get that far with CAB, then the links will fail. Ahhh, it'll crash NEWSie's URL in a heart beat...

WenSuite operates a bit differently. It tries 4 times to "GET" the IP before you get the "TCP/IP" message. If you keep hitting the advance button you will get through. You have to do the same for each link ;(

Bottomline: Why does CAB/CAB.OVL not "resolve" this site, crummy as it is. I'm assuming (ouch) that the error message by WenSuite is correct and that CAB/CAB.OVL is missing something. This is VERY different that most errors that I have run into while Surfing. What do you think??? Errr, it's rather nasty to CAB v2.5, so don't be writing your world famous Novel when you try this site :)

CUL,

Charles
P.S. I was so damn persistent because I needed that ZOOM modem info.

I've just discovered that my news server has trouble with reference lines
that are longer than 250 characters. Exceeding this limit causes the post
to be aborted. The server error generated says "No colon-space" in a
specified part of the references header. That specified part seems to be
right at 250 (half of the 500 recommended in the RFC).

So much for setting standards -- it's formatting to the rescue <g>.

4726. U609 on MegaSTE Board: IC or Transistor ??

Newsgroup: comp.sys.atari.st
Date: 1998-03-09 00:00:00 UTC
From: ae34@iamm07.mathematik.uni-karlsruhe.de
Message-ID: <6e0mmu$oc1$1@nz12.rz.uni-karlsruhe.de>
Source record: 106035

Hi,

does anyone know what kind of thing the part with number U 609 on the Mega STE board is?

This part has been torn out from the board by the previous owner when he reinserted the power supply. From that time on the sound did not work any more he told me.

However, I'm also afraid that the serial ports somehow depend on this part. *None* of the three ports is working. (I posted a question recently on the pinout of the serial ports and thanks to the many answers I was able to test the ports with a loop-back connector using Juergen Meyers test program RS232TST.TOS).

U609 is located right under the fan of the power supply next to the stereo sound chip LMC1992 (which is U608). It has three pins in a row and from the printing on the board it seems to be a transistor, but it's numbered like the IC's ?!?

Who knows which part I should get for replacement ?

Thanks in advance

Rudolf

Hi

I totally agree with you, Charles... too many companies, not only Atari ones, use their web site as a simple advertising doo-dah. You see something and want to buy it, you gotta phone up - what is the point?

Anyway, I try and encourage people to use the internet as much as possible where CyberSTrider is concerned...

I currently have all software for download on the site - and if people wish to register, then they can send a filled in order form by email/fax (which can be sent from my web page).

I encourage people to receive their registration details and/or keycode via email (they can also download the latest files from the web site or I cans end them via email). If they require a masterdisk with their registration, then I charge extra.

A few downers which I recognise and am working on for my site:
1) Auto form to fill in which will email me
2) No provision for paying by Credit Card yet, however I am looking at various options
3) Not fully automated system, but am working on it.
4) Manauls for download (in various formats) to registerers, for them to print out themselves, however on-line docs included in the software should suffice (I bought Eudora from an on-line site and did not want the manuals - as such, no box through the post, no waiting - just a piece of software i could download and use straight away).

Regards
Danny

IIRC (because I once killed this part in my MSTE too) it is a 8.2 V
voltage regulator (Spannungsregler).
This part is not easy to find but perhaps some of the remaining ATARI
dealers in Germany have on of these. If not, try to get in contact with
Best Electronics.

Tschuess,
Frank

Having added a hard drive to my 520 STM in the past,
I found it important to buy the ICD host adapter first.
It comes with a clearly written manual that walks you
through the entire process of selection and installation.

Hmmm ... you might want to try running the programs
from one of the public domain "shells" that provide
a command line. That way, when the program exits,
the screen isn't cleared.

Maybe someone else can name a good shell program.

Soundpool's CD Recorder will do it, it runs with a whole bunch of different CDR's these days (a lot of CDR's are actually either Yamaha or Phillips internals, and it now supports the 4x12x thing that TEAC do). You only need the satge one bit of it to do audio, the Pro level handles multi-session data stuff too. I don't know what the basic level costs over there, but the Pro level is 345 DM in Germany, approx 116 UKP. Soundpool will ship to anywhere if you want. Given that local dealers in this country want 200 UKP upwards for this package, I know where I will be going for mine. Apparently the New Extendos Gold package will be able to do audio CD's when it is released.

Actually I have them all stacked up in issue order with issue 1 at the bottom, there are 2 piles of those, then there are the Zero's, STA's, ST User's, The One ST's and the odd one or two obscure ones that ran a few issues. Oh yeh, and also AC too.

Btw, got STP today, not read it yet, will do later.

Kev.

If I understand the picture correctly you need a 50-way ribbon cable terminated at each end by a 50-way Centronics Insulation Dispacement Connector and having a SCSI 50-way IDC connector (to plug into the device) at some convenient position along its length. The Centronics connectors provide the IN/OUT ports.

Maplins stock all the bits.

I guess you don't use Magic otherwise you would have VT52. PRG
installed as the TOS terminal.

You can still use VT52 without Magic although the vectoring will not
be automatic. VT52 contains a switch to hold the screen when the TOS
program exits.

This is not the whole truth. At least all german STs built from 1988 to
1989 have got TOS 1.02 inside in 2 TOS-ROMs (1040STFMs also with 6 ROMs).
Here you can put in the blitter in most cases, a socket is foreseen on the
board (very simple, I did so with my 1040STf).

Howdy ya'all!
I'm settin' here tryin' to russle up all the parts to get this here CAB 2.5 to run for the internet. I figure since I don't want to run Magic that I best run STinG. All is fine 'cept I has to know where I should corral the CAB Overlay thing for this Falcon and STinG!

I was wonderin' if one of ya can steer me in the right direction so I can set this thing right and impress my friends. It's been quite the rodeo here tryin' do so myself. I sure would like fix this and ride off into the sunset with my pride.

My humble gratitude in advance for your service.

James

|someone give us a plug :)

Charles,

I've been including STuff from comp.sys.atari.st, and once in a while STuff from the programmer and tech NGs on alternating weeks since CompuServe closed the Atari Forum down.

I alternate between the Atari Advantage Forum on Delphi and these NewsGroups so that we get the best possible coverage about what people are talking about. One week will have the NewsGroups, the next will have posts from Delphi. Both are great resources, but some folks have access to only one or the other (or _think_ that this is the case since NewsGroups are easily accessible through Delphi even in ASCII mode).

Thanks for reading the mag in general and the column in particular!

Take care,

Joe Mirando @ STReport

4765. Re: REQ: LOGIC 2.5 ATARI

>
>I upgraded and am extremely pleased!

you mean they have the gall to ask us to pay for it? (I'm talking about Sound Technology (UK Distr.) here but maybe this applies to others too)

I was/am a registered user since Notator SL V2.1 and bought Logic 1.7 and then paid for an upgrade to 2.0 for 50 UKP (a lot of cash) and then a week later Ver 2.01 was available free on the Emagic homepage. Since writing to Sound Tecchnology about this I have not heard a word from them and have never had my calls returned. In TWO YEARS for god's sake.

I have never even been sent any info about 2.5 or whether continuing atari support is likely so if you're reading this Sound Technology then get your act together please and mail me.

sorry about the rant guys I'll stop whingeing now ;-)

cheers! from Jon (Chester UK)

>Is there a GOOD shareware / freeware MIDI-program for the Atari ST?
>
>

The best playing program for the Atari ST/STe is MIDI MUSIC MAKER version 2.26
a shareware program. It is the one that I use to play many different types of
MIDI songs. It also can play the old .AMS files from the eight bit line of
Atari's along with many different types all through your speaker or your
keyboard hookup through your MIDI port. This is availible on the umich.edu
archive.

>
>John Logan (jlog@zetnet.co.uk)

Not totally accurate. It is not compressed twice, but just once.

tgz is tar.gz , same, exactly the same.
tar is an archiver, it doesn't compress at all, it just regroups all
the files into 1 big one.
Then gzip will compress this file.
The good thing about tgz, is that it support longfilename, file
attribute, sym.links etc. Also that it is suported by all common
platform, and that GZ compress VERY well. (very heavy compression, not
the fastest though, but very efficient)

Example: it doesn;t make sense to have a tgz file if ONLY 1 file is
included.
just gz can be used. As you don't need to archive it.
Was that clear? ;)

I think the key point you made is that you haven't gotten the disk yet. I've had nothing but trouble from Toad in the past year or two, promising stuff almost immediately, but not getting it until months down the road. And from hearing from others, my experiences were not unique.

I hope you have better luck, and you get your disk soon, but I certainly would not recommend Toad to anyone these days. OTOH, I have nothing but good to say about Systems For Tomorrow. They are fast, courteous, competitive, have most of the latest stuff, and even take email orders.

b> Class I or II?

Not to pick nits, but Class types aren't defined by Roman numerals, though Group types are. I believe all FAX modems are Group III with Class 1, Class 2 and/or Class 2.0 (Class 2 and 2.0 are not the same).

CAB.OVL should go in your MODULES folder (make sure it's defined in CAB's config), though some have had better luck putting it in the same folder as CAB.APP. Try putting in the MODULES folder first; if that doesn't happen, then try it in CAB's main folder, with CAB.APP. Make sure it's a STiK-compatible CAB.OVL, too.

Apple Canada: Infrastructure gutted, but sales up?

Posted: 18:45 ET

[Staff] - Apple's streamlining strategy seems to have taken effect
worldwide, leaving some divisions with little money to conduct business
with. However, could these corporate cut-backs be irrelevant in the
wake of explosive G3 sales?

The manager of an Authorized Apple Canada Value Added Reseller says
that the streamlining is having a devastating effect on the public
perception of Apple in Canada. "Apple Canada has been gutted. Over half
the infrastructure is gone, leaving little more than a marketing
department. This was not necessarily a bad thing ... there was a lot of

redundancy, and things like customer support, reseller technical support and inventory control for the North American market should be easily handled from anywhere efficiently. But the funding structure has left little for promotion and advertising. The Think Different campaign is basically nonexistent here. Apple has virtually NO corporate presence in Canada today. There are entire regions of Canada, like the Maritimes, where the general public honestly thinks that Apple is out of business."

Despite that bleak outlook, Brock Gunter-Smith of a University campus computer store says sales have are on the rebound. "Here in Canada, at the University of Manitoba Bookstore (where I coordinate all the Mac Sales/Support) we've seen a phenomenal come back as far as Mac sales go since the introduction of the G3s. During the days following the price drop, we've have probably a 30% increase in inquiries about the G3 and about the same increase in total orders. Its very depressing that Apple doesn't advertise in Canada (our Apple Rep told an audience of over 75 people last week that Apple Canada has a $0 advertising budget), as I know it would DRAMATICALLY increase sales, as all we get is second hand advertising from the U.S."

With that lack of advertising its hard to believe that G3s are selling like hotcakes. Gunter-Smith says "The G3s have really turned the tide. For the first time in about 2 years, our warehouse has more Macs in it than PCs!"

Disavow what?

Brighter picture of Apple sales in Europe painted

Posted: 18:45 ET

[B. Wilson] - Following our report containing quotes from a European Mac reseller who portrayed a rather bleak picture of Macintosh sales in Europe, several Apple dealers and journalists have written in with contrasting experiences, conveying a thriving Mac OS market in Europe.

An employee of MacZone's education division in Europe says "MacZone's Apple sales in the UK appear to have stabilized (they have been dropping steadily for the past two years) mainly thanks to G3." He goes on to add that the Macintosh G3s are breaking new boundaries in higher-ed. "In higher ed though, G3 has stopped the rot dead. Everyone I talk to in Universities and Colleges (where the drift to NT had begun) has stopped to take note of G3 - some have even started buying them ...."

The MacZone representatives also provides some information about Apple's advertising situation in the UK. "We've also recently had the 'Think Different' ad campaign running here (with limited TV exposure) which people actually noticed."

Geoff Norman, an IT commentator in Europe says that Apple is not only doing a good job of advertising in Europe, but is pricing its systems very competitively. He says "Apple HAS been running some ads in the non-specialist press. For instance, yesterday's Daily Telegraph - one of the leading broadsheets in the UK - carried a full page add devoted to a PB 1400 for 999 pounds."

Norman also says that older Macs are clearing out fast to make way for the priced-to-move G3s. "The 5500s and 6500s are clearing out of stock very quickly at good prices but, nevertheless, I think a lot of people have held off to await G3s - as I'm doing. The 233KHz desktop - 32MB, 4GB, 512KB cache, 24x CD-ROM, KB but no screen - was introduced at 1399 pounds and can now be bought for 1149. This will probably drop a bit more when the 'official' Apple cuts arrive. Even as

things stand, a G3/233 with 15-inch screen for about 1300 pounds is an amazing deal and fully comparable with big-name PCs in the UK market."

Geoff continues by stating that the issue of Newton cancellation is not being taken nearly as harshly by individuals in Europe. "The Newton issue is not so emotive in Europe and the new range of Macs is just too compelling not to sell - I suspect that Europe will turn in good results for Apple in this quarter."

In France, Apple seems to be somewhat limited by advertising policies. The editor of a French Macintosh publication says "Apple doesn't show the snail ad on TV. Not because they don't want to, but, at least in France, because they are not allowed to. Comparative advertising is forbidden in France. To be more precise, it's very restricted. About a month ago, though, Apple published a 2 page campaign in 'Liberation', one of the biggest daily newspapers in France. A quarter of the first page was about the G3 'being twice as fast as the Pentium II.' The editor goes on to say that Apple's future looks bright. "people here in Europe didn't realize yet, as people in the US seem to have, that a new day has started for Apple. And it's about time they do..."

The manager of an Authorized Apple Canada Value Added Reseller says that the streamlining is having a devastating effect on the public perception of Apple in Canada. "Apple Canada has been gutted. Over half the infrastructure is gone, leaving little more than a marketing department. This was not necessarily a bad thing ... there was a lot of redundancy, and things like customer support, reseller technical support and inventory control for the North American market should be easily handled from anywhere efficiently. But the funding structure has left little for promotion and advertising. The Think Different campaign is basically nonexistent here. Apple has virtually NO corporate presence in Canada today. There are entire regions of Canada, like the Maritimes, where the general public honestly thinks that Apple is out of business."

Despite that bleak outlook, Brock Gunter-Smith of a University campus computer store says sales have are on the rebound. "Here in Canada, at the University of Manitoba Bookstore (where I coordinate all the Mac Sales/Support) we've seen a phenomenal come back as far as Mac sales go since the introduction of the G3s. During the days following the price drop, we've have probably a 30% increase in inquiries about the G3 and about the same increase in total orders. Its

very depressing that Apple doesn't advertise in Canada (our Apple
Rep told an audience of over 75 people last week that Apple Canada has
a $0 advertising budget), as I know it would DRAMATICALLY
increase sales, as all we get is second hand advertising from the U.S."

With that lack of advertising its hard to believe that G3s are selling
like hotcakes. Gunter-Smith says "The G3s have really turned the tide.
For the first time in about 2 years, our warehouse has more Macs in it
than PCs!"

t>> from them since.

The SM194 (or TTM194) is the Atari 19" mono monitor for the TT that can go up to 1280*960, isn't it? Isn't it a VGA or summat? Will a Mega ST drive it at all without some sort of graphics expansion card?

If it will, I can suggest something that worked with Lacescan. I passed over the screen drivers I use in 2-colour mode with either a Matrix CoCo or Crazy Dots 2 card to Derryck Croker and things seemed to work.

My installations seemed consistent when the driver was named in the correct position in ASSIGN.SYS, but I'm pretty sure that neither NVDI MatGraph nor NVDI ET4000 executables were needed.

Here are cutdown versions of of my ASSIGN.SYS files in each case. Note the removal of te letter 'p' when an external driver is used. I can send either screen driver file if G&#65533;nter wants to Email me for it - they are 3Kb and 5Kb respectively...

k> aware, none of the decoder programs I currently possess is able to
k> decode these. I assume base-64 is a PC format and I wonder if anyone
k> knows of a suitable program for the Atari STe, which could handle it.

Base 64 is Mime encoding, a variation on technique of UUEncoding. Use either
ESSCode to decode it or MUNPACK.TTP that comes with Newsie.

k> I don't know if this is similar to .exe files which I am also unable
k> to decode (despite an earlier posting which suggested these could be
k> handled as .zip or.lzh files).

This works if the file is a self-etracting archive, but if it's a PC
executable then it won't.

4782. Q:Atari Mega 2 and multitasking

Newsgroup: comp.sys.atari.st
Date: 1998-03-10 00:00:00 UTC
From: Markus Egg <Markus.Egg@vcpc.univie.ac.at>
Message-ID: <350589BC.D401FDEF@vcpc.univie.ac.at>
Source record: 105891

I've looked through the FAQs, been to sites like e.g.
http://www.cedep.net/~gstamant/atari/mint_e.htm
and some others but I'm still missing some convenient
multitasking environment that is not Linux and not
pay-software like Geneva.

Best thing would be something where I can run the old programs
in a multitasking environment (if this is possible).
And all that on an Atari Mega 2.

Is that just wishful thinking ?

Forget where I got mine. It's very common especially at sites which have MiNT archives. Look under 'Packers', 'Archivers' or even under 'MiNT'.

>mention disabling the stock memory.

It stands to reason it must be disabled with 4Mb installed otherwise
you'd have 512K of original memory overlapping the lower 512K of the
4Mb. It would go bang as soon as the processor came out of reset.

iirc the original poster said it currently had 2.5Mb in which case the
original memory would still be enabled.

>I guess that I could take the time to scan in the
>docs and send them to who is having this problem.

Would be a good idea!

On 3 Mar 1998 22:11:08 GMT, "Kev" <kevj@clara.net> wrote:

>OK, where can I get folder100.prg and more importantly what does it
>*actually* do?

In early machines you could have 40 folders open at the same time
before the system ran out of memory for them and threw a wobbly, after
which it is highly likely the system will scribble all over the media.
It's not just limited to hard disks btw - floppies can have it happen
also. It's just that they don't normally have enough folders on them
but they can.

By 40 folders, I mean C:\FRED\JIM\WIBBLE.TXT is not just one folder,
its two because folder FRED is open and so is folder JIM. If another
process opens the same file its 2 more because they both have to have
their own copies. Thus you can run out very quickly when running lots
of programs at the same time all of which are accessing various paths.
Accessories count as programs here also.

folder100.prg simply installs more memory for open folders. If you
rename it to folder256.prg and plonk it in your auto folder then you
will have increased the limit from 40 to 256 folders for instance.

>I am running Neodesk 4 and Geneva and have sometimes got this error.
>
>Out of Internal Memory, use folder100.prg

There is no need for this program if your hard disk driver is not real
old because it will have an option to do exactly the same thing. Look
for something along the lines of "folder memory/slots" etc.

The Spectrum emulator works well on my STE. I think it requires 1Mb but,
since I haven't read the docs for a long time, I can't say for sure. I do
know it works with 2Mb+ quite nicely in both ST Mono and ST Medium res.

Hi Kai

Atari gave threw Ranarama in with an ST bundle, at one time. This was NOT copy-protected, in fact it was a standard file. I have never got the program to run on any TOS 1.4 or STE machine, although TOS 1.2 is fine!!

I hope this is of some help.

Cheers! for now
Steve

5.11 is an excellent starting point. It's very solid, even on Falcons. I use the MagiC 5.11/Ease 5 combo on my Falcon and am very happy with it. If you wait for a newer version of MagiC, who knows, you could be waiting a very long time. I would go with a very solid 5.11 now, enjoy it and worry about upgrading later.

I find STeno is great for .TXT, and Marcel is fine for text, RTF, and
other imports. It's a good medium between text editor and word processor.

Great, how do I go about looking for open file handles? I can look at
the code all I want, but am looking for some mechanism to detect these
problems so that I can fix them.

Any more specific information would be helpful.

I would love to go to another Atari show in Disneyland Hotel, they had them there when the Lynx was still sold in Babbage's & Electronics Boutique. I filled out the survey and even asked if I could volunteer to work there. The offer still stands, although Vegas is a bit of a commute from Los Angeles, where I'm from.

Hopefully we'll see lots of you there.

So what would be the point of soing it on the web if it would cost you more to get the product??? Are you in that big of hurry to use a product. I have better things to use my money on that the incured expense of the phone bill. Personally I would much rather have a disk and a manual that the docs in a HTML file or a HYP file. I am not about to send my credit card number across the phone lines PEROID, I don't even give it out on the telephone.

Really it is a bigger problem getting information in english from overseas than it is to get the software. The internet hasn't seemed to help this problem at all as far as I see.

BTW it's possible to get at least updates from ASH' mailbox (BBS). I got the "fresh up" from cab 2.5a to 2.5d this way. Not so easy because of the language walls (?) but it's possible and quicker than snail mail. Of course it could be a bit expensive to call from the US, but not too much within Europe (less than postage).

You should also be aware that this might not work correclty everywhere,
sicne your phonecompany might have some restrictions, adn also some modems
have these values locked so that they will work properly with all
phone-companies...

DC> a beginner's step-by-step would be much appreciated! :-)

Hi Derryck, (and Matt Faehnle, and Boris),

AFAIK SoftPC was just an alpha version from Ensignia - it was never officially released.
I've got mine from "somewhere inside the Atariworld" but I know there's a file "Softpc.lzh" circulating.

It runs in TT med from TT's and appearently also from Falcon's if GETREZ_4.PRG is run.

What you do is create a folder "SoftPC" just anywhere on your system and put the files in there. The program uses HDF files as drives, and these are supplied with the program. You can create any HDF file yourself by going to the menu item. Any new drive must be "formatted" first before it becomes usable, therefore you need to go into DOS (on the C: disk supplied with it, at least that was case with my version), execute FDISK and create a DOS-partition on your newly created drive. After that you can use this "drive" for working. Just change the Softpc.cfg so that the drive (file really) is being used as C: or D:. The so-called FSA drive (drive E:) can be any TOS-partition or folder, even a CD-ROM can be used.

Don't mix up the C and D drives with your own Atari C and D drives, they're just fixed files in the SoftPC folder that are being used as the PC C and D drives. After Boris' questions, lastnight I just tried to create a 32 Mb drive, which went without any problems.

The limits are: only 640k of memory, no way to go into extended or expanded memory. Screen rez is 640x400 16 colors, CGA emulation. I've got WP 4.1 running from it, as well as Lotus 1-2-3 and more of that crap :-)
It's slow, but Tracon II runs decently from it.

AFAIK it works with DOS 3.10, 3.20 and 3.30. Boris says he's got it running with DR-DOS too. One day I'm gonna try DOS 6.01 as well.

Be sure you have no disk in the drive (unless it's a DOS systemdisk) when starting SoftPC and when all systemfiles are put on the C: drive it should boot from drive C: easily (mine does, anyway) - and DOS 3.10 will fit on a DD disk anyway.

It was said to run only with no desk ACC's installed, but I run it fine with six ACC's up and running. On the PC, the \ is produced from the #-key.
It won't run under MagiC and it won't run from my graphics card.
Ctl-Alt-Del resets the PC (not your Atari) and the (-key on the keypad represents Num-lock, while the)-key (keypad) is Scroll-lock.

Hope this helps you all out a bit.

I believe you're right. However, I remember IBM offering 2 OSs in the
mid 198o's - first MSDOS (pushed) and CP/M with a GEM front (not
pushed). I understand the latter became TOS.

About a week ago, I ordered the LINK 2 from Toad Computers. I spoke to a nice woman named Jennifer and she took my order and answered all my questions. Well, I got the software and the hardware, but disk A didn't work. I couldn't even get a directory of the disk loaded up. I double clicked the A:\ drive and it would do nothing except spin. I called back and she was so polite, she looked up my order and said that I would get a new disk A. I asked her if I should return the old disk and she said that I didn't need it. I haven't gotten the disk yet, but if you are in the US, definately go with TOAD for some of your stuff. They don't have as much as they used to, but I think that that lady deserves a greatful amount of THANKS! By the way, she is the Atari expert they have there.

>PC-service company / shop, bought a ribbon cable and the right connectors!
>It's not very hard at all...

I did the same with my homemade SCSI hard drive system (built in a PC minitower, and houses two drives and a CD-ROM unit) - just went and got the ribbon cable and the proper connector, 3M makes a phenlonic one that's reasonably priced. The shop where I bought the cable from was kind enough to snap it on with the proper tool.

We'll be demoing how to put together a SCSI-based system at the March 18th TAF meeting, BTW, complete with putting together the cable and setting IDs and termination. :) We'll be basing the installation around hooking it up to an ST, as that's what most of our members have.....

I've had mine in my Falcon for about a year, and for the most part
I love it. However, it is quirky in hi speed mode (which I suspect has
to do with my RAMGizmo board) in which I can't switch resolutions or
run GEMBench without getting two bombs and locking up. Lo speed mode it
runs fine with just about everything. TAF's president Ken MacDonald is
getting his Nemesis (the current version of the board) installed this
week, so we should be able to compare notes and see just how much of a
difference the two versions make.

I LOVE being able to run in a hi-res TrueColour mode, as a matter
of fact it's my default desktop now when running my Internet stuff (you
HAVE to see CAB running in TrueColour!).

One of the things I may be doing on my next trip to the UK in April
will be to try to get the Titan RAM board and see what difference that
makes....

: in early January! http://www.atarihq.com/atari98.html

Southern California seems to be void of ST users. I know, live there. I'm going just because I've never been to an Atari show. (my TOS came on disk) From what I gather from the mags, the shows are a great place to buy current versions of ST software. By the time applications trickle west, you Euros are two verions ahead. :) (yes, read: sour grapes)

Anyway I'm going. I'll be the guy with a dumb expression and a big wad of cash.

Sam

Still using Neochrome. (not really)

4823. Advantages: Mintnet vs. STinG?

Newsgroup: comp.sys.atari.st
Date: 1998-03-10 00:00:00 UTC
From: jperez@Hawaii.Edu
Message-ID: <6e2df8$nfl@news.Hawaii.Edu>
Source record: 105953

Greetings,

I was wondering if there are any advantages to using Mintnet rather than STinG. I had a Mintnet installation working several years ago, but with Chimera it wasn't very stable and the dialer was troublesome. Now that I have STinG working, I cannot solve the speed problems (I'm getting about 1/6th of the data transfer rate of a Z-modem download, which I am told is not at all right). I am thinking of experimenting with Mintnet again. Is it possible that Mintnet will be faster?

Also, is there an updated self installing Mintnet installation or kit? I haven't been able to locate a clearly documented install for Mintnet yet.

Thanks!

Aloha,
John Perez - jperez@hawaii.edu

4824. Falcon 030 Nemesis board

Newsgroup: comp.sys.atari.st
Date: 1998-03-10 00:00:00 UTC
From: james.burr@acpu.com
Message-ID: <889492681@acpu.com>
Source record: 105954

You said here:
-> Has anyone here used the Nemesis? I want to speed up my Falcon, but
-> only if I can do it without compatibility problems, especially with
-> games. Any advice?

I installed the Nemesis. The only game I noticed a problem with so far
is Obsession. It uses the wrong timer and is consistantly faster. If
you get Nemesis make damn sure you have a SVGA monitor. It sure helps.
Also it requires a decent amount of solder skills and some knowledge
about your computers insides and electronics.

Later,
James

>monitor to get TT hi res ,or do I need a Graphics card(crazy dot)?
>Any Info would be Great!

You need a graphics card. Either that or get the flyback (just a guess)
fixed on your Atari 19". Those monitors are hard to abandon -- it cost me
$150 to get the flyback fixed on my TTM195. For monochrome use, I much
prefer the TTM195 over the NEC and graphics card. If your monitor is
really trashed, Systems for Tomorrow has Protar ProScreen 19" monitors
for $299. A TT graphics card, new or used, might be hard to find these
days.

I missed that part <g>.

Nonetheless, when such continuations are used, a NEWSie follow-up only uses the references contained in the first line of the source article. Unless some cutting and pasting is used to rebuild the original references, as was done here.

It certainly does. There is a program called BMKMulti, which was
produced by a guy in the south of England,UK. It can decode everything
from slow morse to slow scan TV, satellite etc. Very good program. I may
still have it somewhere. I just had a quick hunt round now but could't
find it. Hope I haven't thrown the cassette away.

Hope this is helpful,

From: jardas@highland.cz
Message-ID: <6e30nh$5m0$1@nnrp1.dejanews.com>
Source record: 105961

Hello,
are you able to help me with some advice to remapping TTF for NVDI 4.11. We at Czech use CP 1250 or ISI 8859-2. I used CHARMAP soft from Peter Hellinger, and was almost succesfull with NVDI 3.02, but there is a lot of mismatches with 4.11. Speedo fonts are O.K. but TTF are not.
Thank you for the advice beforehand.

Cross-posted to:
alt.games.atari,comp.sys.atari.st,fido.ger.atari,maus.sys.atari.software,rec.games.video.atari,z-netz.rechner.atari.spiele

Hi folks,

I'm looking for an old game, called RANARAMA. It has to run on the
PacifiST-Emulator for PC's, because I haven't the good ole ST anymore.
I cannot use original, because it is an autoboot/copyprotected disk,
which only runs on a geniune Atari ST (and only ST *not* even TT nor
STE!).

I know it is on 'automation CD 170', but I don't know, where to get
it. (sic)

Any hints are welcome!

tia

4833. Moving to MagiC

Newsgroup: comp.sys.atari.st
Date: 1998-03-10 00:00:00 UTC
From: roughley@HORMEL.unix.dsoe.com
Message-ID: <6e34au$6br@thoth.portal.ca>
Source record: 105963

I'm seriously thinking of making the move from Geneva/NeoDesk to MagiC/Ease. I've grown to be very fond of Ease 4 on its own, which I use when not multitasking under Geneva.

Is now a good time to get MagiC? The most current version available in North America is 5.11. To go along with it, I plan on updating Ease 4 to 5, and would like to know the major differences between the two.

Although I'm happy running under Geneva/NeoDesk, I want to take advantage of what MagiC offers (pre-emptive multitasking, long filenames, background DMA, etc.). This would also allow me to run PPP-Connect and try out the cab.ovl that comes with it. But should I wait for the next English-language update of MagiC or is 5.11 a good starting point?

4834. FS: [UK] Atari bundle

Newsgroup: comp.sys.atari.st
Date: 1998-03-10 00:00:00 UTC
From: cgb3@york.ac.GUBBINS.uk
Message-ID: <MPG.f6f26822af1a0f3989760@news.york.ac.uk>
Source record: 105964

The following bundle is for sale in the UK, buyer collects.

1040 STFM
SM125 monochrome monitor
SC1224 clour monitor

Software including:
Prospero C, DevpacST 2, mpe Forth83, Wercs, STOS Basic
Cyber Studio, Paint, Control
Easydraw 2, Trip-A-Tron, Signum!, Protext 5.
10 Infocom titles, plus other games and PD software.
Pile of ST magazines, some books.
Other bits and bobs, eg ST to SCART lead.

I'll even throw in a working but slightly smudgy HP Deskjet+ (still good
for listings)

All for 200 pounds ono.

> history. So, here's my plea. Developers AND re-sellers, offer your stuff
> by Web site, credit cards, AND e-mail. Is that so tough to comprehend?
> The Internet is the way to go, right? "Let's get jiggy with it" <g>.
> Ahhh, that's current American slang :)

Oh, boy, you Americans! :-)

You are so lucky to have netaccess without huge telephone bills. So, the main reason why German software often isnï¿½t available via WWW is that here in Germany the telephone costs for local internet access isnï¿½t free as in huge parts of the U.S.

And as the majority of ATARI users of ATARI software sold in Germany are Germans it is cheaper to send disks than to use the WWW for that purpose.

There are indead a few users who use their modems for getting the latest ASH software but for this you can already use ASHï¿½s BBS (In Germany there is no huge difference between wide area and local phone calls).

But thatï¿½s just my $0.02.

Tschuess,
Frank

Hi

Saw the replies and noted no mention of "Edhack" which can be both an accessory and Program. Good old Word Writer St, St Writer, St writer Elete 1ST Word & 1ST Word +

Though Pagestream is great; as a word processor it is clumsy, as is WordUP, Calamus etc (there are others) these are for desktop publishing

Word Writer has both Dictionary & Thesaurus capability is O L D came out when the 1st ST's did but for simplistic writing is fine.

Has anyone checked with Toad to see if they have something good.

Edhack is by far the nicest little editor/word processor

On 10 Mar 1998, Charles Silver wrote:

>You almost talked me into buying Geneva :)

Yes, and I still say you should buy it. My copy ain't for sale, though, nor is NeoDesk <g>. I plan on running both alternatives (Geneva/NeoDesk and MagiC/Ease). Down the road when I decide one of them has to go, if that's the case, I'll give you a shout. Either way, you'll end up getting something more modern than MultiTOS <ouch!>.

>Waiting for a Englisch version update? Ho-Hummm. Ahhh, what about
>installing MultiTOS/MiNT with some MiNTnet type extentions. I bet it's
>better than PPP-Connect/OVL. If you give it a try, I will <G>. Did you
>know that was possible? I didn't till recently...

The idea of being able to run I-Connect and its cab.ovl was just an afterthought. I don't need I-Connect, but I do need a better cab.ovl (because of re-connection problems -- sometimes the HTML comes in and then CAB times-out waiting for the first graphic). I'm sure in the near future there'll be an English CAB update, for which the benefits will now be twofold for me (the entire package being useable). MiNT isn't for me, although I'd love to use Howard Chu's cab.ovl. I do admit to having I-Connect all configured and ready-to-go. If there's room enough for Geneva/MagiC then there's room enough for STinG/I-Connect.

No... I want MagiC for other reasons -- accessing the Internet had nothing to do with my decision.

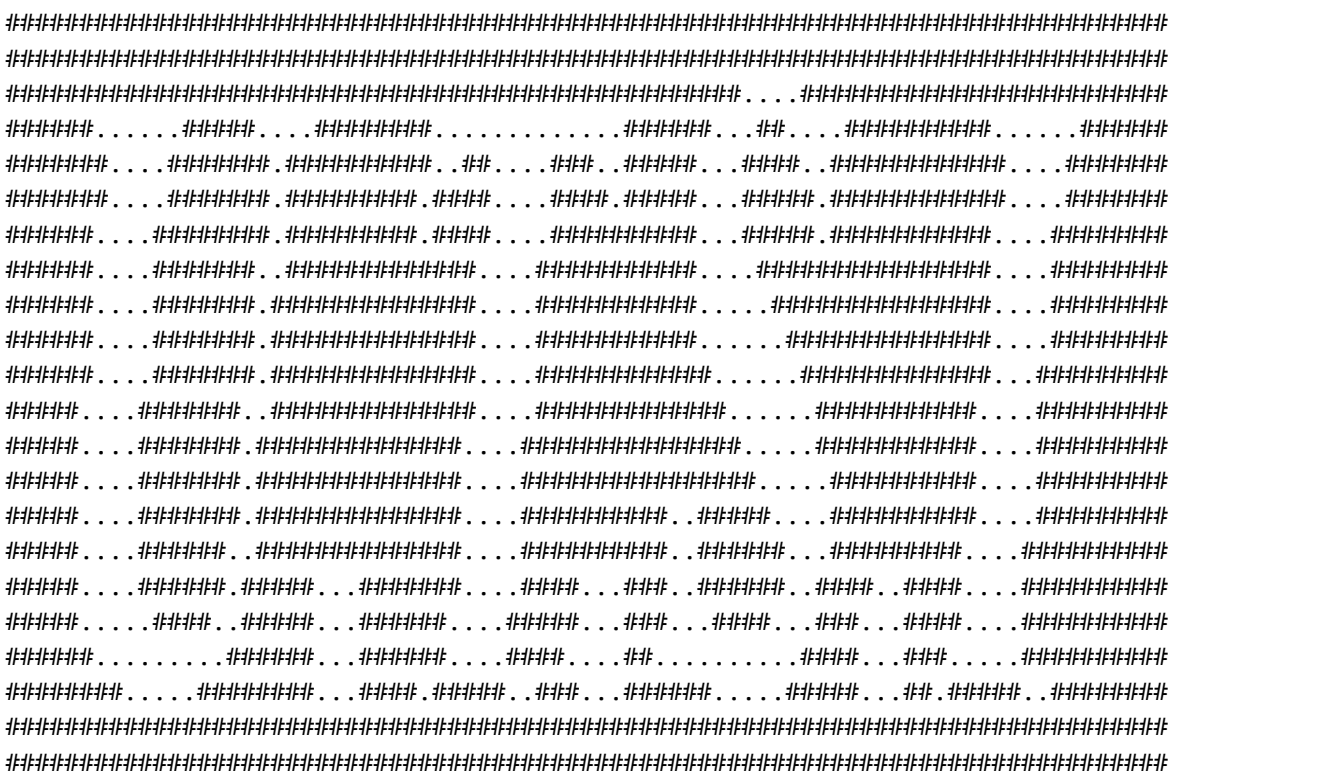
4840. [U.T.S.I] today updated with now 724 links

Newsgroup: comp.sys.atari.st
Date: 1998-03-10 00:00:00 UTC
From: dipching@ping.be
Message-ID: <3505635426a6cd1@ping.be>
Source record: 105970



Hello everyone, you can now find about 731 atari programs url links in
the U.T.S.I ... (previous update was 660 ...)

Also thanks to everyone who is participating at the UTSI when sending
their remarks, found wrong links, contribution and so ...
THANK YOU very much for all these friendly people who are ALSO
maintaining the U.T.S.I

A lot of programmers don't have their own home page, so you can reach
their programs thru the excellent CyberSTrider and Interactive pages,
respectively from Denesh Bhabuta and Joe Connor ... I have now
included all the missing links to their excellent web pages.

Jo Vandeweghe

4841. TT owners... look!

Newsgroup: comp.sys.atari.st
Date: 1998-03-10 00:00:00 UTC
From: "Dr Simon G.K. Williams" <williamssg@cf.ac.uk>
Message-ID: <6e3p43$25$1@loki.cf.ac.uk>
Source record: 105971

Did you know that your TT can produce a spectacular 1280 x 960 paper-white pixel display at 70Hz? Fabulous for midi apps like logic and cubase, dtp, wordprocessing, programming and more! BUT! To get it you need an ECL monitor... Well, here;s a chance to own the best 21 inch one there is! An absolutely immaculate EIZO professional display systems flexiscan 6500, 21 inch FST monitor . Multisync and composite inputs as well as ECL, so you can use it on ALL TT modes, plus on your mac or pc if you've got one! This is the best monochrome paper white display ever made, reflected somewhat in its original price which was over 1200 UK pounds!!! It's had very little use, still has original manuals, cloth and box and is as new.
Despite its extremely compact size for a 21" monitor, I don't have the room for it anymore and am willing to let it go for just 395 pounds!!!!! Yep! The catch? Well it's a bit of beast so I wouldn't recommend shipping it outside the UK, but if you can arrange collection... Also, I would imagine it only works on the UK 240V 50Hz ac.
If your'e interested, then email me (Dr Simon Williams) at either my works address, WilliamsSG@cf.ac.uk, or at home on svp@csi.com. Hope someone can give her a new home....

4842. Re: WTB: Atari 1040STf

Well, now, Windows is pretty old too - version 1 & version 2 just weren't worth much.... But, they were out there....

Hi John, on 22 Feb 98 you wrote: ...respect, brethren
j>
j> On 20 Feb 1998 00:43:24, I wrote:
j>> Has anyone got original disks and docs for Superbase Personal 2 and
j>> Touchup 2.5? Willing to part with them?
j> No offers of Touchup 2.5 yet. Any other suggestions for a good
j> program to clean up scanned images?

Of course, earlier versons of TouchUp are pretty good, but have you tried
contacting Golden Image for v2.5?

The last contact address I had was:

Golden Image (UK) Ltd (Navin Shah)
65 Hallmark Trading Estate
Fourth Way
Wembley
Middlesex
HA9 0LB

Tel: 0181 900 9291
Fax: 0181 900 9281

I think these people were also connected with Gasteiner in North London, who
probably still exist sering the PC or Mac markets. They could easily still
have stock of the v2.5 upgrade which was just under 30ukp at the time of
release. They may well do a deal to get shot of what's left...

4846. Atariworld 98?????

Newsgroup: comp.sys.atari.st
Date: 1998-03-10 00:00:00 UTC
From: kws@Radix.Net
Message-ID: <6e416m$1io$1@news1.Radix.Net>
Source record: 105976

Anyone know what is up with Atariworld 98? The Atari HQ page hasn't been updated BUT at www.myatari.com (B&C Computervisions), his site says that it is going to be in Las Vegas, NV in August of this year. nyone shed some light on this? Want to go, filled out the survey, just want more updates, and actually more coverage so people know about it.

r>
r> Nova's Video Mode Generator jumps from 2 colors to 256, so I just
r> assumed 16 colors wasn't available. Mind you, the reason I got the
r> card was to get away from 16 colors, but I'm curious as to how this
r> mode is attained? Is it through emulator.prg?

VMG4000 offers the same resolutions in 16 colour mode as it does in 2 colour
mode, either from SLCT_DEV or Magic/NVDI's CHGRES. That's why, with a Cray
Dots 2, I can get 1280x960x2 and 1280x960x16 ...

s> your article that I quoted.

I understand the issue of conforming to spec - I really do. I accept that the ASH Emailer does not. However, I can't understand the lack of criticism of products that revel in the fact that they cover a multitude of eventualities, none of which are ever going to surface in 99% of cases, but which find themselves incapable of covering for this one which is handled quickly and simply by many back-bedroom efforts, one of which I'm using now. What is the problem?

I'm aware of what tin is, but in this regard it shows itself to be totally inadequate for the purpose that any user with half a brain would want.

I've seen many text editors that perform the way that TIN does in this regard and I have religiously dumped every one, never to grace my hard drive. They are incompetent beyond words and I will never touch them.

In a world where there are minimum requirements, anyone worth his salt tries to exceed them. Anyone who doesn't gets treated with the respect they don't deserve. Personally I wouldn't dream of downgrading.

s> There is a _simple_ solution. ASH needs to write a patch to fix this
s> bug (for that is what it is, a BUG, and just because the people who
s> suffer for it are the majority of the newsgroup, rather than the
s> minority using this BUGGY product doesn't change that), and give the
s> patch away to all their users.

While the standard exists, as backward as it may be, it must be supported. You are absolutely right.

The only problem left will be that those with readers whose software provides more than the minimum need to be supported by the backward applications that prevent us from making use of our machines. Quite frankly, I'm fed up seeing 40-column messages and being forced to scroll to read them. It's pathetic, simplistic and way-outdated.

There's a way to do it - my first suggestion solved it instantly and I'm no programmer.

Yes, in both online and offline mode. I also find regular disk corruption
traceable back to Newsie - open files etc.

It needs to be looked at...

r> called Script. I really liked it - it had something in common with
r> Signum, but was much simpler. Does anyone know where I can find it?
r> And is Harlekin still available? And where are the best sources of PD
r> application software? Neodesk?

Sorry to come to this message so late, but I hope I can summarise some of the answers you've had from a UK perspective, seeing as you're in Leicester.

First of all, with regard to PacifiST, its strength is in supporting the games side of Atari software. It may well suit application software well enough too - I'm not qualified to say - but you may want to try Gemulator from the FaST Club in Nottingham, or the shareware TOSBOX v1.02 available from Joe Connor's InterActive.

FaST Club Tel: 0115 945 5250 (Helpline 2-3pm only)
PO Box 101 Fax: 0115 914 0545
Nottingham Email: stclub@cix.compulink.co.uk
NG2 7NN Web: http://www.cix.co.uk/~sta/

InterActive
65 Mill Road
Colchester Email: support@inactive.cix.co.uk
CO4 5LJ Web: http://www.cix.co.uk/~inactive/

Script or Signum, as someone else said, is only available in Germany -certainly try ASH at the addresses stated. If you look at their web page you might want to scan the German sections for references to either of these, because those sections are more complete.

The alternative of Papyrus *is* available from System Solutions, but the official distributor remains HiSoft who can be contacted at:

HiSoft Systems
The Old School Tel: 01525 718181 (Order hotline 0500 223660 - free)
Greenfield Fax: 01525 713716
Bedford Email: sales@hisoft.co.uk
MK45 5DE Web: http://www.hisoft.co.uk/

Papyrus will also import First Word and First Word Plus documents directly FWIW.

Harlekin is also distributed by HiSoft, but only until v3.21. As stated elsewhere, Harlekin95 is available from Indigo 2 in Denmark at the address stated, but you'd have to check with them whether it's in English - I suspect not.

EMail: indigo2@cybernet.dk
Web: http://www.cybernet.dk/users/indigo2

NeoDesk has come on quite a lot. It became unfashionable for a while as German software took the lead, but Gribnif seem to have done a lot of work to fall in with current trends so it's worth another look if you're comfortable with it.

The current distributor is now Titan Designs, who are contactable at:

Titan Designs Ltd
6 Witherwood Way Tel: 0121 693 6669
Selly Oak Fax: 0121 414 1630
Birmingham EMail: 100345.2350@compuserve.com
B29 4AX Web: htp://ourworld.compuserve.com/homepages/TITANWEB/

While the programmer at Gribnif can be found at:

Web: http://www4.pair.com/gribnif/

As far as application software goes, there's still a wealth of sites to chose from. In addition tothe suppliers mentioned above, a selection from the UK are as follows - starting with those that have collections on CDROM:

Company Name Contact methods Product types

16/32 Systems Games/Utilities/Hardware/PD

I've got a Golden Image optical too and ceratinly thought the same - no problems with fluff etc, but it does require a special mat rather than any old table top and sometimes you have to orientate the mouse very square to the mat. Otherwise it's good and smooth.

What Steve may've been talking about though was that radio controlled mouse that used a receiver. I remember reading about it many years ago...

4859. [ANN] CoMa Atari Voice/Pro 4.4.0 (Communication Manager)

Newsgroup: comp.sys.atari.st
Date: 1998-03-11 00:00:00 UTC
From: Hartmann@ThePentagon.com
Message-ID: <1d5pzgq.13bg6k215cskn4N@stardust.isdn.cs.tu-berlin.de>
Source record: 105789

Programme-Name: CoMa for Atari Voice/Pro 4.4.0 (COmmunication-MAnager)

Purpose: fax & voice-mail-system, to send & receive fax, answering
machine, mini-mailbox & terminal with internal z-modem

Programme-Type: Shareware / Crippleware

Author: Siegfried Hartmann

Hardware: Computer with MagiC[Mac|PC] or TOS

Download : <http://www.ThePentagon.com/Softbaer>
or Mailbox: (ISDN X.75 & V.34) +4930/62709459

****

CoMa has the following common functions and attributes in all levels

- english documentation
- fax-class 2 & 2.0
- polling (send poll-request-tone only with class 2.0)
- network-capable fax-job-management (3 jobs in 24 hours)
- Serial fax
- Display of the calling-number with ISDN-modems
- Display of call units with ISDN-Modems
- internal editor
- incoming pages are displayed during fax-reception !!
(even on 8 MHz-computers)
- text can be mixed with graphic-logos and signatures
- fax-voice-number management, including groups
- management for incoming fax/messages/mails
- administration of 8 telephone companys
- mini-mailbox with internal send & receive-z-modem
- mini-terminal mit internal z-modem

* * * * * * * * * * CoMa Voice (additional) * * * * * * * * * *

- Answering machine for ZyXEL, Creatix, Elsa/TriStar,
Sportster VI/Voice/Flash and Smarty/Cybermod, kik & Lasat-Modems
- Day & time programmable answering messages
- Multiple outgoing messages for several ISDN-MSN
- Redicrection of incoming calls
- Remote control / recall of new received faxes
- Recall of 7 special messages by DTMF-code
- Real time decoding of sound for Mac/Atari-Soundsystem of ZxXEL
ADPCM3/ADPCM4, Smarty/Cybermod u-Law- & Rockwell ADPCM4-Sounds
- Wave-Sound conversion in ZyXEL- & Cybermod- & Rockwell-format

* * * * * * CoMa Professional Version (additional) * * * * * *

- fax- and voice-on-demand-system
- any amount of messages via DTMF tone recall is possible
- each category can contain up to 100 messages and/or 100 fax-pages.
- it is possible to jump forward and backward between all single messages
using the DTMF-tones * and #
- statistic of category recalls
- first-level-messages can be put together from multiple voice-files.
- for the mini-mailbox you can assign personal passwords and
download-folders to as many users as your RAM allows
- unique message for each caller, who has an entry in the numbers-list
(with ZyXEL Elite & MicroLink ISDN)
- unlimited fax-jobs
- Faxtransmission via polling request (DTMF-PIN not needed -
only for Class 2.0 modems)

* * * * * * * * * * * New in CoMa 4.4.0 * * * * * * * * * * * * *

****************** Voice **********************
- extra button for individual voice messages in receiver dialog box
the voice file has to be saved into the Voice-Outgoing folder

*************** Mailbox/Terminal ***************
- mailbox output is displayed in terminal window
- new command for superuser "rmdir", to delete an empty folder
- faster scrolling in terminal window
- connect-, download- and upload time is displayed as Min:Sec
- last connect time is shown in the window header
- mailbox: more detailed error messages
- intercepting of VT100-codes for cursor left, right, up, down,
HOME and INSERT (Cursor left is used as backspace)
- timebar for ASCII-upload

******************** Fax ***********************
- new checkbox for "add pages in Outgoing-folder" in job-edit-box
- receive fax pages if instead of "next page" "next document" has been sent
- 500 lines send at poll request without professional key possible
- Street and town in numberlist, wildcards <STREET> and <TOWN>

******************** Allgemein ***********************
- administration of 8 telephone companys
- telephone company for each entry seperate adjustable
- Mac: Main-dialog made smaller
- filter for searchword in number- and calls-windows
- pop-up tone/pulse-dialing disapears with a ISDN modem
- Lasat 1280 mi: recall of called and calling MSN
(undocumented modem register S155 has to be 15)
- online time is displayed even after breakdown of connection
- modem reset much faster now
- button for automatic connect to SOFTBAER mailbox in the info-dialog

- registration with Eurocard/Mastercard possible

- various bugfixes

Mailbox/Fax: +4930/62709459 ISDN X.75 (64000 bps) & V.34 (28800 bps)

>Now let's see who agrees...

As a UK English person, I'd say you were spot on. "Programme" for most
purposes (eg TV programmes, theatre programmes etc), but program (US
general spelling) is the norm for computer-related things.

Just tried a quick upload and download with AFTP and everything seems
to be working with the new modules. Also the time setter is now
working with TCP again, and the error messages have gone from POPwatch
and NEWSwatch.

Thanks once again for your work on STinG, Peter, and your fast
response in fixing problems.

Cheers,
John

Item 2. Acquisition or Disposition of Assets.
- --

On February 23, 1998, JTS Corporation (the "Company") sold substantially
all of the assets of the Company's Atari Division, consisting primarily of
Atari
home computer games and the intellectual property rights and license
agreements
associated with such games (the "Atari Assets"), to HIACXI, Corp. ("HIAC"), a

wholly-owned subsidiary of Hasbro Interactive, Inc., for $5,000,000 in cash. The purchase price was determined based upon arm's-length negotiations between the Company and HIAC. The Atari Assets were acquired by the Company in July 1996 when the Company merged with Atari Corporation. There is no material relationship between HIAC and the Company, any of its affiliates, any director or officer of the Company, or any associate of any such director or officer.

Item 7. Financial Statements and Exhibits.

JTS CORPORATION AND
THE DISPOSITION OF THE ATARI DIVISION

UNAUDITED PRO FORMA CONDENSED FINANCIAL STATEMENTS

The following unaudited pro forma condensed financial statements give effect to the disposition of the Atari Division which was consummated on February 23, 1998. The accompanying pro forma condensed balance sheet as of November 2, 1997 assumes that the disposition of the Atari Division by the Company took place on November 2, 1997. The accompanying pro forma condensed statements of operations for the year ended February 2, 1997 and the nine months ended November 2, 1997 assumes that the disposition took place as of the beginning of the periods. The pro forma condensed statements of operations do not include the effect of any nonrecurring charges directly attributable to the disposition. The results are not necessarily indicative of what would have occurred had the disposition actually been made at the beginning of each of the respective periods presented or of future operations of the Company.

EX-99.1
2
EXHIBIT 99.1

Exhibit 99.1

ASSET PURCHASE AGREEMENT

THIS ASSET PURCHASE AGREEMENT (THIS "AGREEMENT") IS ENTERED INTO ON FEBRUARY 23, 1998, BY HIAC XI, CORP., A DELAWARE CORPORATION ("BUYER"), AND JTS
CORPORATION, A DELAWARE CORPORATION ("SELLER").

RECITALS

This Agreement contemplates a transaction in which Buyer shall purchase certain assets (and assume certain future obligations) of Seller in return for the consideration described herein. Buyer is a wholly-owned subsidiary of Hasbro Interactive, Inc.

NOW, THEREFORE, the parties, intending to be legally bound, hereby agree as
follows:

I. CERTAIN DEFINITIONS. As used in this Agreement, the following terms have the meaning given to them below:

"Acquired Assets" means the following assets of Seller:

A. All right, title and interest in and to the Seller's Products;

A. All Intellectual Property associated with the Seller's Products, including the Intellectual Property identified on SCHEDULE 1, and remedies past and future against infringements thereof and rights to protection of interest therein;

A. The license agreements listed on SCHEDULE 2 (the "License Agreements");

(d) All of Seller's claims, causes of action, choses in action, rights of recovery, set-off and recoupment relating to or arising out of any right, property or asset included in the Acquired Assets; and

(e) all business and financial records, books, files, plans, documents, correspondence, lists, drawings, notebooks, specifications, creative materials, advertising and promotional materials, marketing materials, studies and reports of Seller, whether written or electronically stored or otherwise recorded if, and only to the extent, that such foregoing items relate to the Acquired Assets (not including the items of this clause (e) for these purposes) or Assumed Liabilities (subject to Section 5(b)).

Notwithstanding the foregoing, the Acquired Assets shall not include the Excluded Assets.

"Assumed Liabilities" means only liabilities and obligations arising after the Closing under each License Agreement actually assigned to Buyer pursuant to this Agreement.

"Atari Hardware Platforms" means the following hardware platforms: Atari 2600, 5200, 7800, Lynx hand-held and Jaguar game system hardware, Atari 800, ST and Falcon 030 computer family hardware, TOS operating system, 8-bit operating system, and Portfolio palmtop computer.

"Excluded Assets" means the following assets:

(a) inventory, receivables, furniture, fixtures and equipment;

(b) any tax assets of Seller, including pre-paid taxes, tax credits and tax carryovers;

(c) all tax returns and tax records whether or not related to the Acquired Assets;

(d) the $45,000 balance of the royalty guarantee owed to Seller on December 31, 1997 by Interplay Productions, Inc. under Amendment One to the Game License Agreement dated July 29, 1996, between Atari Corporation and Interplay Productions, Inc. and as otherwise identified in SCHEDULE 3;

(e) software developed by or for Seller or its predecessor under license of intellectual property rights from a third party or third parties for use on the Atari Hardware Platforms to the extent that such software is not related to or associated with any of the trademarks and copyrights set forth in SCHEDULE 1 or any of the game titles set forth in SCHEDULE 3;

(f) Hardware embodying Intellectual Property (other than Seller's Intellectual Property) that is licensed from third Persons.

(g) all assets associated with or related to Seller's disk drive business.

"Hardware" means equipment, components, circuitry, integrated circuits, processors, casings, layouts (including synthesizable code), mask works, manufacturing data, and all designs, schematics, tooling, formulae, processes, and know how therefor (whether or not any such items are presently embodied in physical components) and related Intellectual Property.

"Intellectual Property" means any or all of the following and all statutory and/or common law rights throughout the world in, arising out of, or associated therewith: (i) all patents and applications therefor and all reissues, divisions, renewals, extensions, provisionals, continuations and continuations-in-part thereof; (ii) all inventions (whether patentable or not), invention disclosures and improvements, all trade

secrets, proprietary information, know-how and technology; (iii) all works of authorship, "moral rights", copyrights (including derivative works thereof), mask works, copyright and mask work registrations and applications; (iv) all industrial designs and any registrations and applications therefor; (v) all trade names, logos, trademarks and service marks, trademark and service mark registrations and applications together with the good will of the business symbolized by the names and the marks; (vi) all computer software including all source code, object code, firmware, development tools, files, records and data, all media on which any of the foregoing is recorded; (vii) Uniform Resource Locators, World Wide Web site addresses and domain names; (viii) any similar, corresponding or equivalent rights to any of the foregoing; (ix) all documentation related to any of the foregoing; and (x) all goodwill associated with any of the foregoing.

"Key Marks" means each of the following marks: Atari, the Fuji logo, Asteroids, Battlezone, Breakout, Centipede, Combat, Crystal Castles, Millipede, Missile Command, Night Driver, Pong, Ultra Pong, Tempest, Warlords and Yar's Revenge.

"Knowledge" means actual knowledge of (i) the senior executives of Seller or (ii) John Skruch.

"Lien" means any mortgage, pledge, lien, security interest, charge, claim, equity, encumbrance, restriction on transfer, conditional sale or other title retention device or arrangement (including a capital lease), transfer for the purpose of subjection to the payment of any indebtedness, or restriction on the creation of any of the foregoing, whether relating to any property or right or the income or profits therefrom.

"Person" means an individual, a partnership, a corporation, an association, a joint stock company, a trust, a joint venture, an unincorporated organization, or a governmental entity (or any department, agency, or political subdivision thereof).

"Registered Intellectual Property" means all United States, international and foreign: (i) utility and design patents, design registrations and utility models and all pending applications (both regular and provisional) for any of the foregoing; (ii) registered trademarks, service marks or trade names, applications to register trademarks, service marks or trade names, intent-to-use applications, or other registrations or applications related to trademarks, service marks or trade names; (iii) registered copyrights and applications for copyright registration; (iv) any mask work registrations and applications to register mask works; (v) Uniform Resource Locators, World Wide Web site addresses and domain names and (vi) any other Seller Intellectual Property that is the subject of an application, certificate, filing, registration or other document issued by, filed with, or recorded by, any state, government or other public legal authority.

"Seller Hardware" means Hardware included in the Acquired Assets.

"Seller's Intellectual Property" means Intellectual Property of Seller that constitutes an Acquired Asset.

"Seller's Products" means (i) those products of Seller acquired by Seller pursuant to the merger of Atari Corporation, a Nevada corporation, with and into Seller on July 30, 1996, and any other products of Seller thereafter derived therefrom, including products relating to or associated with the trademarks set forth in SCHEDULE 1 (including video and computer games, games for handheld devices, consoles, Internet play, all other games for play on any platform whatsoever (subject to the License Agreements), and merchandise bearing any Intellectual Property relating to or associated with the foregoing, whether now offered for sale or license by Seller or discontinued) and (ii) all of Seller's products that are listed on SCHEDULE 3.

I. SALE AND PURCHASE; ASSUMPTION OF LIABILITIES; PURCHASE PRICE; CLOSING.

A. SALE AND PURCHASE OF THE ACQUIRED ASSETS. At the Closing (as defined below), on the terms and subject to the conditions of this Agreement, Seller shall sell and Buyer shall purchase all of the Acquired Assets for the sum of $5 million to be paid at the Closing by wire transfer to an account designated by Seller.

A. ASSUMPTION OF LIABILITIES. In addition, at the Closing, on the terms and subject to the conditions of this Agreement, Buyer agrees to assume and become responsible for all of the Assumed Liabilities at the Closing. Buyer shall not assume or have any responsibility, however, with respect to any other obligation or liability of Seller that is not an Assumed Liability. Without limiting the foregoing, Buyer shall not assume or be responsible for any liabilities relating to events arising or occurring prior to the Closing, regardless of when payable, and all such liabilities shall be for the account of Seller.

A. CLOSING; CLOSING DELIVERABLES. The closing shall occur in the offices of Wilson Sonsini Goodrich & Rosati, 650 Page Mill Road, Palo Alto, California 94304 upon the execution and delivery of this Agreement by the parties hereto ("Closing"). At the Closing the parties will deliver the following documents, and such additional documents as the parties may agree to transfer ownership of the Acquired Assets to Buyer (which shall be in form satisfactory to both parties) :

1. Seller shall deliver:

(A) A bill of sale for the Acquired Assets.

(B) Global trademark assignments.

(C) Country-specific trademark assignments.

(D) Patent assignments in recordable form.

(E) Assignment of the License Agreements.

(F) Copyright assignment.

(G) Global powers of attorney respecting trademarks.

(H) Country-specific powers of attorney respecting trademarks.

(I) Assignment of Internet domain name.

(J) Disclosure Schedule (as defined below).

1. Buyer shall deliver:
(A) The purchase price by wire transfer.

(B) An instrument of assumption of the Assumed
Liabilities.

A. ASSIGNMENT OF CONTRACTS AND RIGHTS. Anything in this Agreement
to the contrary notwithstanding, neither this Agreement nor the consummation
of
the transactions contemplated hereby shall constitute an assignment, or an
agreement to assign, any Acquired Asset or any claim or right or any benefit
arising thereunder or resulting therefrom (a "Consent-Required Asset") if an
attempted assignment of such Consent-Required Asset, without consent of one or
more third parties, would constitute a breach or other contravention thereof
or
would in any way adversely affect the rights of Buyer or Seller thereunder;
PROVIDED, HOWEVER, that once all such consents are obtained, this Agreement
shall automatically effect an immediate assignment of such Consent-Required
Asset without further action by either party hereto. Buyer and Seller will
use
their commercially reasonable efforts (which shall not be deemed to require
any
payment of money or other value by Seller or Buyer) to obtain the consent of
the
other parties to any such Consent-Required Asset for the assignment thereof to
Buyer as Buyer may reasonably request. If such consent is not obtained, or if
an attempted assignment thereof would be ineffective or would adversely affect
the rights of Seller thereunder so that Buyer would not in fact receive all
such
rights, Seller and Buyer will cooperate in a mutually agreeable arrangement
under which Buyer would obtain the benefits and assume the obligations
thereunder in accordance with this Agreement, including sub-contracting or
sub-licensing to Buyer, or under which Seller would enforce for the benefit of
Buyer, with Buyer assuming Seller's obligations, any and all rights of Seller
against a third party thereto. Seller will promptly pay or assign to Buyer
when
received all monies received by Seller with respect to any Consent-Required
Asset and any claim or right or any benefit arising thereunder, except to the
extent the same

represents an Excluded Asset. Nothing in this Section 2(d) shall be construed
to diminish the representations, warranties and covenants of Seller respecting
such consents.

I. REPRESENTATIONS AND WARRANTIES OF SELLER. Seller represents and
warrants to Buyer that the statements contained in this Section 3 are correct
and complete as of the Closing, except as set forth in the disclosure schedule
separately delivered by Seller to Buyer with this Agreement, which schedule
shall be initialed for identification by the parties (the "Disclosure
Schedule"). Except as expressly set forth in this Agreement and the
Disclosure
Schedule, Seller hereby expressly disclaims any and all other warranties of
any
kind or nature, whether express, implied or statutory, relating to the
Acquired

Assets, including the implied warranties of title, non-infringement, merchantability and fitness for a particular purpose. Buyer acknowledges that the Seller Hardware is transferred "as is" and that, notwithstanding anything to the contrary in this Agreement and the Disclosure Schedule, Seller makes no representation or warranty of any kind with respect to the Seller Hardware.

A. ORGANIZATION OF SELLER. Seller is a corporation duly organized, validly existing, and in good standing under the laws of the State of Delaware.

A. AUTHORIZATION OF TRANSACTION. Seller has full corporate power and authority to execute and deliver this Agreement and to perform its obligations hereunder. Without limiting the generality of the foregoing, Seller has taken all corporate and other action required for the execution, delivery and performance of this Agreement by Seller, including the sale of the Acquired Assets as provided herein. This Agreement constitutes the valid and legally binding obligation of Seller, enforceable in accordance with its terms. The persons who have executed this Agreement on behalf of Seller have been duly authorized to do so.

A. NONCONTRAVENTION. Neither the execution and the delivery of this Agreement, nor the consummation of the transactions contemplated hereby, shall (i) violate any statute, regulation, rule, judgment, order, decree, stipulation, injunction, charge, or other restriction of any government, governmental agency, or court to which Seller is subject or any provision of the charter or bylaws of Seller or (ii) conflict with, result in a breach of, constitute a default under, result in the acceleration of, create in any party the right to accelerate, terminate, modify, or cancel, or require a notice under any contract, lease, sublease, license, sublicense, franchise, permit, indenture, agreement or mortgage for borrowed money, instrument of indebtedness, security interest, or other arrangement to which Seller is a party or by which it is bound or to which any of its assets is subject, except where the violations, conflicts, breaches, defaults, accelerations, terminations, modifications, cancellations or failures to give notice, individually or in the aggregate, would not have a material adverse effect on the Acquired Assets, the Assumed Liabilities or the ability of the parties to consummate the transactions contemplated by this Agreement (a "Material Adverse Effect"). Seller need not give any notice to, make any filing

with, or obtain any authorization, consent, or approval of any government or governmental agency in order for the parties to consummate the transactions

contemplated by this Agreement, except where the failure to do so, individually
or in the aggregate, would not have a Material Adverse Effect.

A. CONSENTS. No approvals or consents of or assignments by any person (including any federal, state or local governmental or administrative authorities) are necessary in connection with the execution, delivery or performance of this Agreement.

A. TITLE TO THE ACQUIRED ASSETS. Seller has good and marketable title, free and clear of all Liens, (i) to the Acquired Assets identified on SCHEDULE 1 (other than copyrights that are not identified on SCHEDULE 4), SCHEDULE 3 and SCHEDULE 4 and (ii) to its Knowledge, to all other Acquired Assets. At the Closing, Buyer shall obtain good and marketable title, free and
clear of all Liens (i) to the Acquired Assets identified on SCHEDULE 1 (other than copyrights that are not identified on SCHEDULE 4), SCHEDULE 3 and SCHEDULE
4 and (ii) to its Knowledge, to all other Acquired Assets.

A. MATERIAL CONTRACTS. True, correct and complete copies of the License Agreements have been delivered to Buyer. Seller has performed in all material respects all obligations required to be performed by Seller under the License Agreements. To the Knowledge of Seller, each of the other parties to the License Agreements has performed in all material respects all the obligations required to be performed by them thereunder to date. Each License Agreement (i) is valid, binding and enforceable in accordance with its terms, (ii) is in full force and effect with no default or dispute existing or, to the
Knowledge of Seller, threatened with respect thereto, and (iii) shall not be terminated or otherwise affected by the execution and delivery of this Agreement
or the consummation of the transactions contemplated hereby. No consent of any
third party is required for the assignment of any License Agreement to Buyer. Seller has provided Buyer with a complete and accurate list of payments paid to
Seller by each licensee under the License Agreements, indicating the licensee and the month paid, from June 30, 1996 to present. Seller has not received any
advanced payments (including prepayments of royalties, or other payments by reason of which a licensee is entitled to reduce its current or future royalty or payment obligations) under the License Agreements which have not been earned
by Seller.

A. INTELLECTUAL PROPERTY.

1. To the Knowledge of Seller, SCHEDULE 1 contains a list of
all trademarks and service marks and applications therefor included in the
Acquired Assets that have not lapsed and that are, except as qualified
therein,
Registered Intellectual Property (the "Registered Marks"), all patents and
applications therefor that are included in the Acquired Assets that are
Registered Intellectual Property (the "Registered Patents"), and United States
copyrights included in the Acquired Assets, certain of which are Registered
Intellectual Property. SCHEDULE 3 contains certain game titles that are
included in the Acquired Assets. To the Knowledge of Seller, (A) the
description of the Registered Marks on SCHEDULE 1 contains, to the extent set
forth and

except as qualified therein, the true and accurate date of registration,
registration number, registered owner and the class of the Registered Marks,
(B) the description of the Registered Patents on SCHEDULE 1 contains the true
and accurate patent number and file date of the Registered Patents, and (C)
the
description of the United States registered copyrights on SCHEDULE 1 included
in
the Acquired Assets that are Registered Intellectual Property contains the
number of such copyright registration.

1. Since July 30, 1996, to the extent that any Seller's
Intellectual Property has been developed by any Person other than Seller for
which Seller has, directly or indirectly, paid, Seller has a written agreement
with such Person with respect thereto and thereby has obtained ownership of,
and
recordable title to, and is the exclusive owner of, all developed Seller's
Intellectual Property by operation of law or by valid assignment.

1. Except as set forth in any License Agreement, Seller has
not
transferred ownership of or granted any license of or right to use or
authorized
the retention of any rights to use any Seller's Intellectual Property to any
other Person.

1. The Seller's Intellectual Property constitutes all
Intellectual Property used in and/or necessary to the conduct of Seller's
Atari
division business as currently being conducted by Seller.

1. To the Knowledge of Seller, neither Seller's Products
included in the Acquired Assets nor the use of Seller's Intellectual Property,
(A) infringes upon or misappropriates the Intellectual Property of any Person,
(B) violates the rights of any Person (including rights to privacy or
publicity), or (C) constitutes unfair competition or trade practices under the
laws of any jurisdiction. Seller has received no notice from any Person
claiming that Seller's Products included in the Acquired Assets nor the use of
Seller's Intellectual Property infringes upon or misappropriates the
Intellectual Property of any Person or constitutes unfair competition or trade
practices under the laws of any jurisdiction (nor, to the Knowledge of Seller,

is there any basis therefor).

1. There are no contracts, licenses or agreements between Seller and any other Person with respect to Seller's Intellectual Property under which there is, to the Knowledge of Seller, any dispute or any threatened dispute regarding the scope of such agreement, or performance under such agreement including with respect to any payments to be made or received by Seller thereunder.

1. To the Knowledge of Seller, no Person is infringing or misappropriating any Key Mark, other than such infringements or misappropriations that, individually or in the aggregate, would not have a Material Adverse Effect on such Key Mark.

1. Seller and, to the Knowledge of Seller, each prior owner of the Seller's Intellectual Property have taken whatever reasonable steps that are required to protect rights in confidential information and trade secrets of such Person and its successors.

1. None of the Seller's Intellectual Property is subject to any proceeding or outstanding decree, order, judgment, agreement or stipulation that restricts in any manner the use, transfer or licensing thereof by Seller or may affect the validity, use or enforceability of such Seller's Intellectual Property.

1. Seller is not required to make or accrue any royalty payment to any third party in connection with the sale, distribution, license, transfer or other disposition or exploitation of any of the Acquired Assets.

1. Seller has not developed any new video game software since July 30, 1996.

1. Seller owns no Intellectual Property not included in the Acquired Assets that is directly or indirectly competitive with the Seller's Intellectual Property.

1. (A) Alan Helbush is the Administrative Contact listed in the domain name record on file with Network Solutions, Inc./InterNIC Registration Services, and (B) Seller controls the domain name "ATARI.COM".

1. None of the Intellectual Property associated with the Seller's Products, including the Intellectual Property identified on SCHEDULE 1, or remedies past and future against infringements thereof and rights to

protection of interest therein is an asset specified in clause (g) of the definition of "Excluded Assets" set forth in Section 1.

A. SUFFICIENCY OF ASSETS. The Acquired Assets include all assets, properties and rights necessary for compliance by Buyer with all obligations relating to the Assumed Liabilities.

A. LITIGATION. There is no claim, dispute, action, proceeding (including arbitration), suit or appeal, or investigation, at law or in equity,
pending (other than those, if any, with respect to which service of process or similar notice has not yet been made and which are not within the Knowledge of Seller) or, to the Knowledge of Seller, threatened against Seller or involving any of the assets or properties of Seller before any court, agency, authority, arbitration panel or other tribunal that would have a Material Adverse Effect.

There is no outstanding order, writ, injunction or decree of any court, agency,
authority, arbitration panel or other tribunal, and Seller is not in default with respect to any notice, order, writ, injunction, or decree, in each case relating to, or affecting the Acquired Assets, the Assumed Liabilities or the Seller's Products.

A. UNDERLYING DOCUMENTS. Copies of all documents listed or described in the Disclosure Schedule and the Schedules hereto have been furnished or made available to Buyer. All such documents are true, correct and
complete copies, and there are no amendments or modifications thereto.

A. BROKERS' FEES. Seller has no liability or obligation to pay any
fees or commissions to any broker, finder, or agent with respect to the transactions contemplated by this Agreement for which Buyer or its affiliates could become liable or obligated.

A. COMPLIANCE WITH BULK SALES LAWS. The sale, transfer and assignment by Seller to Buyer hereunder and the consummation of the other transactions contemplated hereby do not constitute a "bulk sale" by Seller, and
it is not necessary under the laws of any jurisdiction that Seller comply with the bulk sales laws of such jurisdiction.

A. DISCLOSURE. Neither this Agreement nor any of the Schedules nor,
to the Knowledge of Seller, any other documents delivered by Seller in connection with this Agreement contains any untrue statement of a material fact
or omits a material fact necessary to make the statements contained herein or therein, in light of the circumstances in which they were made, not misleading,
and, to the Knowledge of Seller, there is no fact that has not been disclosed to

Buyer that materially affects adversely or could reasonably be anticipated to materially affect adversely the Acquired Assets, or the operation of the Acquired Assets by Buyer as currently conducted by Seller.

I. REPRESENTATIONS AND WARRANTIES OF BUYER. Buyer represents and warrants to Seller that the statements contained in this Section 4 are correct and complete as of the Closing.

A. ORGANIZATION OF BUYER. Buyer is a corporation duly organized, validly existing, and in good standing under the laws of the state of Delaware.

A. AUTHORIZATION OF TRANSACTION. Buyer has full power and authority
(including full corporate power and authority) to execute and deliver this Agreement and to perform its obligations hereunder. This Agreement constitutes
the valid and legally binding obligation of Buyer, enforceable in accordance with its terms. The person who has executed this Agreement on behalf of Buyer has been duly authorized to do so.

A. BROKERS' FEES. Buyer has no liability or obligation to pay any fees or commissions to any broker, finder, or agent with respect to the transactions contemplated by this Agreement for which Seller or its affiliates could become liable or obligated.

A. NONCONTRAVENTION. Neither the execution and delivery of this Agreement by Buyer, nor the consummation by Buyer of the transactions contemplated hereby, will violate (a) any provision of the Certificate of Incorporation or bylaws, as amended, of Buyer or (b) any statute, regulation, rule, judgment, order, decree, stipulation, injunction, charge or other restriction of any government, governmental agency or court to which Buyer is subject.

A. ASSESSMENT OF VALUE. Buyer has been authorized by its ultimate parent entity to make a good faith assessment of the fair market value of the Acquired Assets, has made such assessment, and has determined that the fair market value of the Acquired Assets as of the Closing is less than $15,000,000.

I. POST-CLOSING COVENANTS AND AGREEMENTS.

A. COOPERATION. Each party shall, at all times following the Closing, not take any action inconsistent with the satisfaction of its obligations hereunder and, subject to the following sentence, shall promptly take any further action necessary or desirable to carry out the purposes of this
Agreement (including the execution and delivery of such further instruments and
documents) as the other party may reasonably request. Seller shall take all actions reasonably requested by Buyer, at Buyer's expense (provided that Buyer shall not be obligated for any cost to Seller in respect of the time of Seller's

employees, officers or directors), to enable Buyer to establish a recordable chain of title to the Acquired Assets, including contacting prior owners of items thereof to request appropriate instruments for recordation.

A. DELIVERY. Immediately following the Closing Seller shall deliver to Buyer, and Buyer shall accept and remove from Seller's premises at Buyer's expense within 30 days of the date of Closing, all copies of tangible embodiments of Acquired Assets transferred to Seller (other than software and code, and such other items as the parties may mutually agree, which shall be transferred electronically on or immediately following the Closing and all tangible embodiments of which shall thereafter be destroyed by Seller); PROVIDED, HOWEVER, that (i) any information contained in such materials listed in clause (e) of the definition of "Acquired Assets" that does not relate to the Acquired Assets may be deleted by Seller before such materials are delivered to Buyer and (ii) Seller may make copies of any business or financial documents (other than documents containing Seller Intellectual Property) prior to delivering them to Buyer. Except as provided in Section 5(c), Seller shall cease use of the Seller's Intellectual Property, including the name Atari and the "Fuji" logo relating thereto.

A. SELLER INVENTORY. Seller owns certain unsold inventory of games bearing the Atari and/or Fuji trademark, and certain other Registered Marks and containing other Seller's Intellectual Property (the "Inventory"). Buyer hereby grants to Seller an irrevocable, worldwide, royalty-free license, for a period of one year from the date of the Closing to use the Registered Marks and other applicable Seller's Intellectual

Property relating to such Inventory solely for the purpose of selling the Inventory. Except as set forth in the previous sentence, after the Closing Seller shall have no right to exploit the Seller's Intellectual Property. Without limiting the foregoing, Seller shall not, following the expiration of the one-year license period set forth above, sell any product referred to in clause (e) of the definition of "Excluded Assets" set forth in Section 1. Seller warrants that the Inventory sold pursuant to this Section 5(c) shall be of like kind and quality to that previously sold by Atari Corporation in the ordinary course of its business.

A. NOTICE OF DEVELOPMENTS. Seller shall give prompt written notice to Buyer of any material development that could have a Material Adverse Effect. Each party shall give prompt written notice to the other of any material development affecting the ability of the parties to perform their post-Closing obligations under this Agreement.

A. ENFORCEMENT OF RIGHTS. In connection with the enforcement of its rights of ownership of the Acquired Assets and the enjoyment thereof, Buyer may bring actions in the name of Seller, or cause Seller to join any such action as a party, as reasonably necessary, provided that Buyer shall indemnify Seller with respect thereto.

A. MAINTENANCE OF INTELLECTUAL PROPERTY; DELIVERY OF NOTICES. After the Closing, Seller shall not be responsible for the maintenance or renewal of any registration with respect to the Acquired Assets, such responsibility to belong to Buyer as the owner of the Acquired Assets; PROVIDED, HOWEVER, that Seller shall promptly forward to Seller any and all notices and correspondence which it may receive pertaining to the Acquired Assets; and FURTHER PROVIDED that Seller shall remain responsible for the maintenance and renewal of registration with respect to all of the Consent-Required Assets retained by Seller pursuant to Section 2(d) of this Agreement as a consequence of the failure to obtain a required consent of a third party until such time as the applicable consent is obtained.

A. LITIGATION SUPPORT. In the event and for so long as Seller actively is contesting or defending against any action, suit, proceeding, hearing, investigation, charge, complaint, claim or demand in connection with any fact, situation, circumstance, status, condition, activity, practice, plan, occurrence, event, incident, action, failure to act, or transaction involving the Acquired Assets or the Assumed Liabilities, Buyer will provide access upon prior request and during its regular business hours to the books, records and other items specified in clause (e) of the definition of Acquired Assets set forth in Section 1 as shall be reasonably necessary in connection with the contest or defense, all at the sole cost and expense of Seller and subject to Seller's execution and delivery of Buyer's standard form of confidentiality agreement with respect to such items.

I. INDEMNIFICATION.

A. INDEMNIFICATION AND REIMBURSEMENT OF BUYER'S LOSSES. Seller shall indemnify Buyer and its affiliates, together with their respective officers, directors and employees (each a "Seller's Indemnitee") against Losses (as defined below) as set forth in this Section 6. If a Seller's Indemnitee shall have suffered a Loss by reason of (i) the breach of any of the representations or warranties made by Seller herein, (ii) any matter arising prior to the Closing with respect to the Seller's business, an Acquired Asset or an Assumed Liability, (iii) any liability of Seller that is not an Assumed Liability or (iv) any breach of a covenant of Seller hereunder, Seller's Indemnitee shall be reimbursed for such Loss by Seller as set forth in this Section 6. For purposes hereof, "Loss" shall mean any losses, liabilities, claims, damages and expenses incurred or reasonably expected to be incurred,

including penalties, fines, interest, amounts paid in settlement and reasonable fees and disbursements of counsel, and expenses incurred in connection with any investigation, action, suit or proceeding instituted against an indemnified party. Notwithstanding the foregoing, Seller shall have no obligation to indemnify Seller's Indemnitees for Losses which, cumulatively, total less than $25,000; PROVIDED, HOWEVER, that if cumulative Losses equal or exceed said $25,000, then Seller shall indemnify Seller's Indemnitees for all of such Losses. Liquidated Claims (as defined below) actually paid by Seller under this Section 6 shall be limited to an aggregate of $5 million.

A. INDEMNIFICATION AND REIMBURSEMENT OF SELLER'S LOSSES. Buyer shall indemnify Seller and its affiliates, together with their respective officers, directors and employees (each a "Buyer's Indemnitee") against Losses as set forth in this Section 6. If a Buyer's Indemnitee shall have suffered a Loss by reason of (i) the breach of any of the representations or warranties made by Buyer herein, (ii) any matter arising after the Closing with respect to the Buyer's business, an Acquired Asset or an Assumed Liability, provided such matter is not related to or arising from any breach of a covenant, representation or warranty of Seller or any act or omission by Seller involving wilful misconduct, fraud or bad faith, or (iii) any breach of a covenant of Buyer hereunder, Buyer's Indemnitee shall be reimbursed for such Loss by Buyer as set forth in this Section 6. Notwithstanding the foregoing, Buyer shall have no obligation to indemnify Buyer's Indemnitees for Losses which, cumulatively, total less than $25,000, provided however that if cumulative Losses equal or exceed said $25,000, then Buyer shall indemnify Buyer's Indemnitees for all of such Losses. Liquidated Claims actually paid by Buyer under this Section 6 shall be limited to an aggregate of $5 million.

A. PAYMENT. At such time as the reimbursable amount of a Claim or a Third Party Claim has been determined in accordance with this Section 6 (a "Liquidated Claim"), the indemnifying party shall immediately pay the Person to be indemnified hereunder (an "Indemnitee") the amount of the Liquidated Claim.

No forbearance of an Indemnitee in demanding payment from the indemnifying party shall act as a waiver of any right of an Indemnitee to receive payment from the indemnifying

party, nor shall it relieve the indemnifying party of any obligation to an Indemnitee under this Agreement.

A. NOTICE OF CLAIMS. In the event an Indemnitee has any claim for indemnification under Section 6(a) or Section 6(b) (a "Claim"), it shall give

prompt written notice thereof to the indemnifying party, including in such notice a brief description of the facts upon which such claim is based and the amount thereof.

A. THIRD PARTY CLAIMS.

1. If any third party shall notify an Indemnitee with respect to any matter (a "Third Party Claim") that may give rise to a claim for indemnification against a party hereto (the "Indemnifying Party") under this Section 6, then the Indemnitee shall promptly notify the Indemnifying Party thereof in writing; PROVIDED, HOWEVER, that no delay on the part of the Indemnitee in notifying the Indemnifying Party shall relieve the Indemnifying Party from any obligation hereunder, unless (and then solely to the extent) that the Indemnifying Party is prejudiced.

1. The Indemnifying Party shall have the right to defend the Indemnitee against the Third Party Claim with counsel of the Indemnifying Party's choice reasonably satisfactory to the Indemnitee so long as (A) the Indemnifying Party notifies the Indemnitee within 15 days after the Indemnitee has given notice of the Third Party Claim that the Indemnifying Party will indemnify the Indemnitee as required by (and subject to the limitations of) this Section 6 for Losses arising out of, relating to, in the nature of, or caused by the Third Party Claim; (B) the Indemnifying Party provides the Indemnitee with evidence reasonably acceptable to the Indemnitee that the Indemnifying Party will have the financial resources to defend against the Third Party Claim and fulfill its indemnification obligations hereunder; (C) the Third Party Claim involves only money damages and does not seek an injunction or other equitable relief; (D) settlement of, or an adverse judgment with respect to, the Third Party Claim is not, in the good faith judgment of the Indemnitee, likely to establish a precedential custom or practice materially adverse to the continuing business interest of the Indemnitee; and (E) the Indemnifying Party conducts the defense of the Third Party Claim actively and diligently.

1. So long as the Indemnifying Party is conducting the defense of the Third Party Claim in accordance with Section 6(e)(ii) above, (A) the Indemnitee may retain separate co-counsel at its sole cost and expense and participate in the defense of the Third Party Claim; (B) the Indemnitee shall not consent to the entry of any judgment or enter into any settlement with respect to the Third Party Claim without the prior written consent of the Indemnifying Party (not to be withheld unreasonably); and (C) the Indemnifying Party shall not consent to the entry of any judgment or enter into any settlement with respect to the Third Party Claim without the prior written consent of the Indemnitee (not to be withheld unreasonably).

1. In the event any of the conditions in Section 6(e)(ii) above

is or becomes unsatisfied, however, (A) the Indemnitee may defend against, and consent to the entry of any judgment or enter into any settlement with respect to, the Third Party claim in any manner it reasonably may deem appropriate (and
the Indemnitee need not consult with or obtain any consent from, any Indemnifying Party in connection therewith); (B) the Indemnifying Party shall reimburse the Indemnitee promptly and periodically for the reasonable costs of defending against the Third Party Claim (including attorneys' fees and expenses), and (C) the Indemnifying Party shall remain responsible for any Losses the Indemnitee may suffer resulting from, arising out of, relating to, in
the nature of, or caused by the Third Party Claim to the fullest extent provided
in this Section 6.

A. DISPUTED CLAIMS. If Seller objects to any Claim or Third Party Claim, it shall give written notice of such objection and brief statement of the
grounds of such objection to Indemnitee within 20 business days after notice is
received. If no such objection is given, such Claim or Third Party Claim, as the case may be, shall be a Liquidated Claim. If such objection is made, Indemnitee and Seller shall meet and use their best efforts to settle the dispute in writing that when resolved shall be a Liquidated Claim.

A. SURVIVAL. The provisions of this Section 6 shall survive the Closing. Notwithstanding anything to the contrary in this Agreement, no Claim or Third Party Claim may be asserted by a Seller's Indemnitee under this Section
6: (i) with respect to Losses arising in connection with the obligation to pay
taxes, following the date of the expiration of the applicable statute of limitations for such obligation; (ii) with respect to a Loss arising out of or in connection with a License Agreement, following the termination of such License Agreement in accordance with its terms; and (iii) with respect to all other Losses, following August 31, 2000. No Claim or Third Party Claim may be asserted by a Buyer's Indemnitee under this Section 6, other than Losses arising
with respect to the Assumed Liabilities, following August 31, 2000. Notwithstanding the preceding sentence, an Indemnitee may assert a Claim or Third Party Claim under this Section 6 with respect to Losses that are the result of fraud or wilful misconduct by the Indemnifying Party at any time within the applicable statute of limitations for such claim.

A. The right of each party hereto to assert Claims and receive indemnification payments pursuant to this Section 6 shall be the sole and exclusive right and remedy exercisable by such party with respect to any breach
by the other party hereto of any representation or warranty or failure to perform any covenant required to be performed by such other party; PROVIDED, HOWEVER, that the above shall not prevent a party hereto from seeking specific

performance of a covenant which another party hereto has failed to perform under
this Agreement.

I. MISCELLANEOUS.

A. NO THIRD PARTY BENEFICIARIES. Except as otherwise specified herein, this Agreement shall not confer any rights or remedies upon any person other than the parties and their respective successors and permitted assigns.

A. ENTIRE AGREEMENT. This Agreement (including the documents referred to herein) constitutes the entire agreement between the parties and supersedes any prior understandings, agreements, or representations by or between the parties, written or oral, that may have related in any way to the subject matter hereof.

A. SUCCESSION AND ASSIGNMENT. This Agreement shall be binding upon
and inure to the benefit of the parties named herein and their respective successors and permitted assigns. Seller shall not assign any of its rights, interests or obligations hereunder without the prior written consent of Buyer.

Buyer may assign its right, interests and obligations hereunder to any Person provided that such permitted assignee agrees to be bound by the terms hereof and
to assume all obligations of Buyer hereunder.

A. COUNTERPARTS. This Agreement may be executed in one or more counterparts, each of which shall be deemed an original but all of which together shall constitute one and the same instrument.

A. HEADINGS. The section headings contained in this Agreement are inserted for convenience only and shall not affect in any way the meaning or interpretation of this Agreement.

A. NOTICES. All notices, requests, demands, claims, and other communications hereunder in writing. Any notice, request, demand, claim, or other communication hereunder shall be deemed duly given five business days after mailing if sent by registered or certified mail, return receipt requested,
postage prepaid and addressed to the intended recipient as set forth below:

If to Seller:

JTS Corporation
1661 Baypointe Parkway
San Jose, California 95134
Attention: President

Copy to:

Cooley Godward LLP
5 Palo Alto Square
Palo Alto, California 94306

Attention: Andrei M. Manoliu, Esq.

If to Buyer:

HIAC XI, Corp.
1027 Newport Avenue
Pawtucket, Rhode Island 02862
Attention: President

Copy to:

Hasbro, Inc.
1027 Newport Avenue
Pawtucket, Rhode Island, 02862
Attention: General Counsel

Copy to:

Wilson Sonsini Goodrich & Rosati
650 Page Mill Road
Palo Alto, California 94304
Attention: Eric W. Wright, Esq.

Any party may give any notice, request, demand, claim, or other communication hereunder using any other means (including personal delivery, expedited courier, messenger service, facsimile, telex, ordinary mail, or electronic mail), but no such notice, request, demand, claim, or other communication shall be deemed to have been duly given unless and until it is received by the person for whom it is intended. Any party may change the address to which notices, requests, demands, claims, and other communications hereunder are to be delivered by giving the other party notice in the manner herein set forth.

A. GOVERNING LAW. This Agreement shall be governed by and construed in accordance with the laws of the State of California as such laws are applied to agreements entered into and to be performed entirely within California by California residents.

A. AMENDMENTS AND WAIVERS. No amendment of any provision of this Agreement shall be valid unless the same shall be in writing and signed by Buyer and Seller.

A. EXPENSES. Each of Buyer and Seller shall bear its own costs and expenses (including legal fees and expenses) incurred in connection with the negotiation and preparation of this Agreement and the transactions contemplated hereby. Buyer shall, pursuant to Section 5(a) of this Agreement, bear all costs

and expenses of the recordation of chain of title to the Acquired Assets, including preparation and recordation of appropriate assignments of the Acquired
Assets.

A. CONSTRUCTION. The language used in this Agreement shall be deemed to be the language chosen by the parties to express their mutual intent,
and no rule of strict construction shall be applied against any party. Any reference to any federal, state, local, or foreign statute or law shall be deemed also to refer to all rules and regulations promulgated thereunder, unless
the context requires otherwise. Except as otherwise specified, references in this Agreement to Sections and Schedules are to Sections of, and Schedules attached to, this Agreement. Except where the context clearly requires to the contrary, "including" shall mean "including, without limitation".

A. SCHEDULES. The Schedules identified in this Agreement are incorporated herein by reference and made a part hereof.

A. TRANSFER TAXES. Any and all sales, use or other transfer taxes arising from the transactions contemplated by this Agreement shall be paid by Seller.

A. CONFIDENTIALITY OF INFORMATION. All information given to a party
by the other party in connection with this Agreement ("Confidential Information") shall be used only for purposes related to the consummation of the
transactions contemplated herein, and shall be disclosed to the receiving party's employees and representatives only on a "need to know" basis in connection with such purposes. If the Closing does not occur for any reason, each party shall maintain in confidence all Confidential Information of the other party, shall return to the disclosing party all tangible embodiments (and
all copies) of such Confidential Information and shall not use such Confidential
Information for any purpose; PROVIDED, HOWEVER, that the forgoing restrictions shall not apply to: (i) information that is or becomes a matter of public knowledge through no act or failure to act of the receiving party, its representatives or employees, (ii) information that becomes available to the receiving party from a source not under an obligation of confidentiality to the
disclosing party, or (iii) information that was known to receiving party prior to its disclosure to the receiving party by the disclosing party.

IN WITNESS WHEREOF, the parties have executed this Asset Purchase Agreement
on the date first above written.

I wonder what plans Hasbro has for atari. Theres' $$ in the arcade
division and home console games division. Hehe MAybe we'll see a new
atari console; then again maybe not hehehe.

Now, the question is, will Hasbro Interactive do anything worthwhile with
Atari. I did notice that the computers were specifically listed as being
part of the deal. It makes me curious that they specifically mentioned
the computers (8-bit, ST, Falcon, and TOS), so does that mean there is
some plan to use this for something? I mean, $5 million for Atari is a
good chunk of money. I wonder who we can get to tell more of this deal.
Sure enough $5 mil is not worth it for Atari's management......

Maybe Hasbro has a game system in the works and wants to use the Atari
label.......

I'm sure in the coming months rumors will start to appear everywhere!

According to Fowler's Modern English Usage, 3rd edition, 'program' meaning a list of instructions for a computer is routinely used in all English speaking countries. I must confess I always have used 'programme' in the past but I am happy to change. In non-computer use (eg list of music to be played) 'programme' is used in British English and 'program' in American English. (Though the word in inital use in British English was also 'program'.)

If you consult the OED, you'll find that the original spelling in UK
was 'program' as it should be spelt from its Greek and Latin origins.
This was the spelling that the pilgrim fathers took to the US with
them. It was only in the late 19th century that the poms got a taste
for the ponsified French way of spelling the word with the 'mme'. So,
historically and etymologically , 'program' is more correct.

$5 million is actually a very small sum of money for the name alone, if the right people can act upon the right memories of the right consumers. That the computer lines are included is either complementary or central to their plans; that's what we'll be watching for. Don't necessarily expect anything right off the bat. Many wise investors, seeing an opportunity, act well in advance of any plans, buying when others are fleeing... a la Warren Buffet buying 20% of worldwide above-ground silver reserves recently. He's just waiting... he can afford to.

I thought I recently heard that Hasbro was laying off several hundred employees and closing a plant. I wonder if the Atari purchase has anything to do with this. Could be a refocusing of their management's vision. Hmmm... an Atari web-box? No reason you can't sell one today for $99.

They've gone and done the same thing with dialog, trying to spell it
"dialogue" or some such silly thing, plus the famous colour/color thing.
Was it Churchill that said "two nations divided by a common language" or
some such thing? There have to be examples where the Yank's use more
letters than the Brit's, but I can't think of any, so maybe that is the
rule to go by.

I find it a bit odd that you've never seen "programme" before. Just take a
look at the cover of the TV Times etc.

"programme" is the English spelling and has been for as long as I can
remember, but not when it comes to computer programs. Only things like
"programmes" of events etc. This is similar to computer "disks". "discs" is
the proper Enlgish spelling but again, not in computer terms, where we adopt
the US spelling.

So to summarise; it's "program" and "disk" :)

Gary

Here's a quick and dirty translation fo the homepage from this site:

--------------8<---------------8<-------------

Hello to all Internet travelers.

We (the TOS4you'98 meeting team) created a website to be able to keep the most up-to-date information for the Atari Fair planned by the Pro Atari Computer Club (a registered association). This fair is a new fair, unrelated to the Neuss fair scheduled for the beginning of April.

Where and when? The fair will be held In Schaafheim, near Aschaffenburg [tr. -- it looks to be near Frankfurt on the Main river, excitingly near where I once lived for a year] on the first weekend in May (2nd and 3rd of May, 1998).

A list of exhibitors, a meeting calendar, and a map of the area are available at the website http://www.pac-ev.de/index.htm.

You can get the HTML code of these webpages, with all necessary graphics, from our BBS, which was created particularly for this purpose. The BBS computer can simultaneously serve as a faxserver so that you can receive the most important information from it also by fax. The phone number for both services is: 06028 - 996726.

Should we have forgotten some important or interesting information, please call us or send us eMail or faxes with your questions using the information below:

For potential commercial exhibitors: Peter Kotulla; Tel. 06028-996724; Fax 06028-996725; eMail peter_kotulla@ab.maus.de; Memeler Stra�e 10 * 63843 Niedernberg.

Regarding the website, faxserver or mailsite, and for private exhibitors: Arne Sch�rmann; Fax & Tel. 06181-850264; eMail arne_schuermann@of.maus.de; Bruchk�beler Landstr.110a * 63452 Hanau.

Regarding the presentations schedule, contact Marcus Stolzenberg; Fax 09373-99825; Am Weinberg 51 * 63937 Weckbach.

Considering Hasbro's success with the Frogger remake (as lousy
as it was, it did sell), I bet Hasbro is just chomping at the bit to
re-release some of Atari's back catalog in anticipation of similar
success. Somehow I doubt Hasbro will do anything with the hardware, but
who knows. Maybe they will incorporate it into some kind of toy, like
a Pico-style device.

Now, let us argue about 'summarise' or 'summarize', realise or
realize, etc, etc

Insert extremely large, very evil, grin and hearty chortle at this
juncture.

Not necessarily, the agreement merely spells out that Hasbro gets all
the
assets of Atari, from video games to computers. It doesn't mean Hasbro
is
going to release computers, just says they now own all the
rights/patents/etc.
to the computer line.

Essentially, JTS is transferring everything under the Atari label to
Hasbro.

> Clive inigo@easynet.co.uk

Only the SCSI version of the Zip drive works.

You will need an ACSI to SCSI adapter to hook the Zip drive up to your Atari and Bigdos or HDDriver software driver to access the DOS partitioned Zip Disks.

ICD sells the ACSI to SCSI adapter, their Web Site is:
http://www.icdinc.com/atari/index.html

Also there is Link II, I don't know the Web Site address, I think they're in Germany.

The drivers:
HDDriver - Systems Solutions in the UK - http://www.ssolutions.com this site is hard to log on to, so you might have to try a few times
Here is where to get info & demo -
http://acp5.chemie.uni-kl.de/seimet/atari_english.html
Bigdos - http://wwwrzstud.rz.uni-karlsruhe.de/~ujo7/bigdos.html

Hopefully this will get you going.

Mille, although the address looks intriguing, it's a bad idea to not post
the proper address here. "surf.to" involves redirection, which is not even
handled properly by the latest CAB 2.7 beta (or is it an OVL feature ? I'm
not entirely sure. I surely tried OVL 1.2901, and I had to click around a
lot to finally end up at the desired location).

No problems with Netscape though.

In article <6e2df8$nfl@news.hawaii.edu>,
jperez@Hawaii.Edu (John Perez) writes:

> I was wondering if there are any advantages to using Mintnet
> rather than STinG.

It mainly depends on what you want. MiNTnet's suite of networking tools
and applications is more comprehensive than STiK / STinG's, but almost
none of all them uses GEM, most are to be run from a commandline. STinG
runs on all machines with all TOS compatible OSs (includes even MagiCMac
on Macintosh and MagiC-PC), while MiNTnet requires MiNT.

This's already the whole list of main differences. MiNTnet is out if you
can't or don't want to run MiNT, or if you prefer GEM to comandlines.
While you'd certainly choose MiNTnet if you wanna use all the network
applications that exist, and can afford to run MiNT.

If you're a programmer, you might insist on the BSD like programming
interface of MiNTnet, which does not exist yet for STinG.

> ago, but with Chimera it wasn't very stable and the dialer was
> troublesome. Now that I have STinG working, I cannot solve the speed
> problems (I'm getting about 1/6th of the data transfer rate of a Z-modem
> download, which I am told is not at all right).

Of course it isn't. Do you suffer from corrupt data (Check the Dialer's
Statistics tool for dropped packets) ? Have you installed HSMODEM 0.7
correctly (i.e. before STinG) ?

> experimenting with Mintnet again. Is it possible that Mintnet will be
> faster?

I haven't done any comparisons by myself, but there have been several reports
that STinG is the faster one, possibly because it's less relying on the
performance of the underlying OS.

Atari does NOT have an arcade division. It's a long story, but the end result of it all is that Atari Games, the arcade game maker, is now a division of Williams (maker of Defender, Sinistar, etc...).

As for a new Atari console... I wonder if Hasbro is a Project X licensee?

4900. Sting and CAB 2.5 *downloading binary files*

Newsgroup: comp.sys.atari.st
Date: 1998-03-11 00:00:00 UTC
From: Barry_Schut
Message-ID: <3506db9e@p18.f503.n286.z2.fidonet>
Source record: 105830

Hi Peter,

I don't know if you can remeber me from the Inet Email conversations we had, but I've got a nice problem, again:

When downloading binary files from the internet the connection rate never gets above 500 bytes/sec in CAB 2.5, while on my fathers powermac I can retrieve files at a rate of (max) 3.5k. Since were doing it on the same Tornado modem (28k8) I can't emagine why STING *or* CAB won't do it as fast as Netscape 3.0 on the P-MAC the settings are almost Identical, so that wouldn't be the problem. And another thing (I don't know if it has any thing to do with CAB or STING) When downloading a file, it seams to lose contact (CAB msg: 'software caused connection abort err: -315) at 95% of the binary file, giving me constantly corupted files... Do you know anything about this? I've never had this on my fathers P-MAC.

BTW how did you connect STING.STX to that last Email you send me? Was it on an Atari? if yes with which program, and how?

Thanx,

Read 'ya
Barry

The Nemesis is sofware activated so you shouldn't have any problems with games (unless somehow they manage to activate the board!)

Otherwise the only software that I've found that doesn't like Nemesis too much is Nima's Microtek scanner driver which exits with a TOS error code if run in Nemesis High.

You might run into printing problems, use a printer spooler such as GEMSpooler.

>pay-software like Geneva.

Well, I'm afraid it's one or the other. The current options are:

-Geneva or MagiC, which are commercial, but complete TOS replacements.
-MiNT, which is freeware, but very Unix flavoured and requires a lot of
fiddling, and an AES replacement.
-Linux won't run on a Mega2. It requires at least an 030.

>
>Best thing would be something where I can run the old programs
>in a multitasking environment (if this is possible).

All depends on what old programs you want to run. Any program that does not
follow Atari's guidelines will not run. Some sequencers for example definitely
cannot run in a multitasking environment.

Most modern software should work though.

Cheers,

Nick.

>within Europe (less than postage).

If they can distribute them on a BBS, just why can't they do it on the Web ? I just can't understand the difference.

But anyway, I'm sure that the biggest barrier isn't in the means of distribution, but is rather the lack of will of most german developers to translate their software.

I really wouldn't mind buying directly from any software distributor, if only they would publish at least an english version of their software and put up english versions of their web pages. It seems to me that, except for some rare exceptions, most german developers are just happy to stay on their home market, and don't really care about exporting even to European countries, let alone the US or Canada.

It's really sad, because Germans are producing the highest quality serious software at the moment, and the international demand for products such as Papyrus, Texel, MagiC, HDDriver, etc, is HUGE. The cost of translation would surely be covered by the sales increase, and everyone would definitely benefit from this.

As far as ASH is concerned, it seems to me that they are intentionally ignoring international demand for their products, because of bad experiences with several foreign distributors. If that's the case, then why not distribute the software themselves ? It's easy to charge credit cards and maybe send the software either through email or on a web page with a serial number, or through snail mail.

Cheers,

Nick.

Sorry I can't help with that, but this is how I use munpack under Thing myself.
After downloading tons of binary newsgroup files with Newsie, I have a
bunch of .txt files in an \offline\foo\ folder.
1. copy munpack to that \foo\ folder.
2. drag that copy of munpack out onto the Thing desktop.
3. select ALL and drag every file onto the munpack icon.
4. all files are decoded, non-encoded files are skipped, everyone is happy :-)

Hi,

AIUI "program" is the american-english spelling and "programme"is the international-english spelling. As a non-american I have always followed the rule that if you are writing about a computer program then use "program" and if you are writing about a television programme or a programme of events at a conference or festival then you use "programme". When using program as a verb (i.e. to program a computer) I alway use "program".

Now let's see who agrees...

Hello All,

Now that I have everything running OK on my (new to me) Falcon.
I have decided to part with my trusty Mega 1. I would like to sell
all the hardware detailed below as one package. I can arrange
delivery anywhere in the UK, but would prefer to sell in person
so that the buyer can see the goods working and take them away
him/herself. I live in Newcastle upon Tyne.

I am looking for offers in the region of 200ukp for the whole package.

Michael
email:m.clemmetsen@sunderland.ac.uk

**Details Follow:

* Atari Mega ST Featuring (as if you didn't know):
separate CPU and keyboard, blitter chip, TOS 1.04,
VME expansion bus (e.g. for a graphics card).
Including original Atari mouse (though you'll have to be a real
purist to use it!)

Originally with 1MB surface mounted RAM:
upgraded with Frontier Extra RAM to 4MB.

Autoswitch Overscan hardware modification fitted. This provides up to a
704x496 resolution (if I remember correctly) when used with the SM124.
This can be switched on or off with the accompanying software. You can
create a list of programs that do not like the extended resolution and
the software automatically switches the Overscan off when you run an
incompatible program. The screen has occasionally been less stable when
running Overscan so you should consider it as an optional extra. There
are no problems at all without Overscan running. That is you should not
worry about the installation having damaged the Mega 1, it is the
Overscan itself that is faulty. I bought the Overscan from Compo shortly
before they went bust so I was unable to get it changed.

* SM124
Atari branded monochrome monitor displaying ST High (640x400):
72MHz refresh rate, very solid and stable image.

* Quantum 40MB Harddisk
Housed in Gasteiner metal case with integrated power supply and
ACSI to SCSI adapter. Plugs straight in to the DMA port on the Mega.
Currently partitioned with a 10MB boot partition (drive C:) and a
30MB data/apps partition (drive D:) for maximum cluster allocation.
Can be partitioned according to your needs - or you can do it yourself.

* Miscellaneous
SCART cable to connect to a SCART TV just in case you want to play games or run ST Low software. The Mega (being a serious computer) does not have a TV modulator.

Printer cable.

Extra long keyboard cable - I can't remember why I made this, but it may come in useful if you want to see if you can read the screen from the other side of a room.

20 blank DS/DD disks

* Software
Original System Disks

A number of Floppyshop disks of PD software.

Epic: 3D space combat game

The Killing Cloud: 3D flight sim type game (I liked this one a lot - the closest you'll get to playing the unreleased SkyHammer for the Jaguar)

As I am using my commercial software with the Falcon I am not selling it, but I assume that as readers of this newsgroup most people will already have some kind of Atari and software to run on it.

** End of Details

Hi Dave,

Dave Gostl wrote:
>
> Is there a FAQ somewhere or some docs to these little extras that
> come with 5.11?
I found this on ASH's web site (important bits translated in <>):

Unser Lieblingsbetriebssystem geht mit der Zeit und bietet ab Version
5.1 neue Funktionen in der Benutzeroberflï¿½che, die allen Programmen
zugute kommen: Die Grï¿½ï¿½e eines Fensters kann in Echtzeit geï¿½ndert
werden, der Fensterinhalt wird bereits aktualisiert, wï¿½hrend die Maus
bewegt wird und nicht erst beim Loslassen der Maustaste. Gleiches gilt
fï¿½r das Verschieben: Es wird nicht mehr ein Rahmen, sondern das Fenster
samt Inhalt bewegt. Eine weitere hilfreiche Neuerung ist das
Window-Shading: Mit einem Doppelklick auf die Titelzeile eines Fensters
verschwindet der gesamte Fensterinhalt, lediglich die Titelzeile bleibt
sichtbar. Ein erneuter Doppelklick auf die Titelzeile lï¿½ï¿½t das Fenster
wieder in seiner vollen Pracht erscheinen. Dies ist besonders praktisch,
wenn man schnell einmal einen Blick auf den vom Fenster verdeckten
Bildschirmbereich werfen muï¿½. Das geht nun ohne lï¿½stiges Verschieben des
Fensters. Das Beste daran: Anders als Iconify, fï¿½r das die Programme
extra angepaï¿½t werden mï¿½ssen, funktioniert Window-Shading mit allen
GEM-Anwendungen.
< Version 5.1 introduces new user interface functionality that benefits
all programs: window sizes can be changed in real time, window contents
are updated continually not just when you release the mouse button. The
same goes for moving a window - the entire window not just an outline is
moved. A further enhancement is Window-Shading: a double-click on a
titlebar makes the entire window
disappear, only the titlebar remains. A further double-click on the
titlebar
restores the entire window. This is especially useful when you want to
see
what is hidden behind a window - you can now do it without moving the
window.
The best thing about Window-Shading is that it works with all GEM
progams, not
just those that know about it as is the case with Iconify. >

Das Fenster- und Menï¿½-Handling wurde optimiert: Speziell bei der Arbeit
mit OLGA-Anwendungen konnte es vorkommen, daï¿½ die Hauptmenï¿½zeile nicht
zum aktiven Fenster paï¿½te - dieses Problem tritt mit MagiC 5.1 nicht
mehr auf.
< Window and Menu handling has been optimised. The case where OLGA aware

applications could not fit their main menu into the active window no
longer appears with MagiC 5.1 >

Auch dem Desktop MagiC Desk haben wir eine Frischzellentherapie
spendiert, APPLICAT und MGSEARCH sind jetzt tastaturbedienbar, die
Zuordnung von Icons zu Anwendungen und Dateitypen in APPLICAT wurde
vereinfacht.
< MagiC Desk has also been improved. APPLICAT and MGSEARCH can now be
controlled by the keyboard and the assignment of icons to applications
in APPLICAT has been simplified. >

Ein echtes Highlight ist MGNOTICE, mit dem Sie Ihren Desktop mit
garantiert umweltfreundlichen Notizzettelchen ï¿½berhï¿½ufen kï¿½nnen. Farbe,
Schriftart und Schriftgrï¿½ï¿½e fï¿½r die Notizen sind natï¿½rlich frei wï¿½hlbar.
< A real highlight is MGNOTICE, this allows you to put environment
friendly notices on your desktop. Colour, Font and Font size are all
freely configurable on a per Notice level. >

Voraussetzungen: Atari ST(E)/TT/Falcon mit 4 MB RAM.
< Requirements: Atari ST(E)/TT/Falcon with 4 MB RAM. >

Hope this helps,

Michael

>and I dreaded each time I got a
>MIME encoded message (most people on other platforms seem to use MIME these
>days, and not UUencoding).
Yes, indeed.

>>>But things became a lot easier when I started using "Munpack"
>>I will try it.
>You won't regret it!
That's right! munpack worked right away. For my first run, I made things as
simple as possible by putting munpack and the message file together on a RAM-disk.
I called munpack with no options and: done. I got a .dsc text file with the ascii
part of the message plus the 2 files that were encoded in the message. This is
more than enough for what I need for the future. :-)) The program even dealt
correctly with the LF line terminations of the message (Unix) while producing
a .dsc file with CR-LFs. Very nice.

>If anyone finds out how I can make it save the decoded files etc. in a
>specified directory (i.e. "tmp") regardless of where the *.MIM message file
>is located I'd be very interested in knowing how.
After reading carefully the man pages, I don't think this is possible.
The -C option is just to tell the program that the file to process is located
in another folder than munpack. This is useless if you decode one single file,
but will save typing if you decode several at once, e.g.:
munpack -C d:\path1\path2\...\message-folder filenode1 ..... filenoden

Thanks again.
Cheers.

> correct?

Hi !

Most VGA monitors need a minimum horizontal frequency of 30 or 31 kHz.
So you cannot use them for low or medium resolution of the ST.
But with a very simple adapter cable you can use an old or even the newest
PC monitor for ST high resolution (71 Hz vertical frequency).

You need a male ST monitor connector and a female VGA connector and a few
cables. The pin layout of the ST connector is in your ST refernce manual,
the VGA connector layout should be in any VGA monitor manual.
You have to connect Ground, Monochrome Out to Red, Green and Blue and
Monochrome detect to Ground, Hsync and Ysync is obvious.

Happy working!

>In early machines you could have 40 folders open at the same time
>before the system ran out of memory for them and threw a wobbly,
Guy, I am not sure that this is an accurate description of the problem.
I know the question is a recurrent one, and has probably been dealt with here many times. Anyway:
I think that the problems refers to the number of times a folder has been opened (entered) since boot-up. It would look like GEMDOS has some fixed memory area for folder info, and would not release, or release incorrectly, that memory when exiting the folder.
I ran into the problem while I was testing a hard disk backup program of mine. The program was cleanly opening and closing folders, I never had more than, say, a dozen folders opened at the same time, and still got the "Out of Internal Memory".
AFAIK, the problem was improved, but not suppressed, in earlier versions of TOS.

Maybe someone has a reliable info on that?

Cheers.

]-I am the only freak on earth collecting Falcon games!

Hi! I've got the full version of Running, got it from the Computer
Dungeon. I've not had it long, so I can't tell you much abou it. It
seems to start out just like the demo, and I've not gotten off of
level 1 yet, so I can't tell you about the rest. The manual is a
printed (and stapled) affair of about 5-6 pages or so. It comes on
3-4 disks, and does require some HD space. About 10-15 megs, all told,
and the manual says it can go as high as 18 megs, IIRC...Still, for
the price, and considering how big it is, I think its worth it. It
works fine under Nemesis, too...BTW! ;-)

Hi, When you cut the resistor wire nearest the MMU you can then measure the value of the resistor using a multimeter, without effect on the rest of the computer. Cheers, Nigel Williamson.

There's an even cheaper solution:

With only a wire and a resistor, as far as I can remeber, you can modify
your interface SLMC804.
In an old german ST magazine called "TOS" there was a corresponding
article (it must have been in 1991).

I did the patch and it worked fine.
I can find the article if you are interested.

So long,
Carsten

Source record: 105864

Hello,

Dans l'article <y8xN.565$HS1.617201@news.internetMCI.com>,
john.graser, <john.graser@mci2000.com> a ��crit :
��I just purchased a HP Deskjet 722C for use on my Falcon and IBM Compatible
��to replace my Deskjet Plus that just die. It works fine on the PC but when
��I print with the Atari Falcon or my 520ST the computer acts like its sending
��it but nothing prints out.
��
��The printers light doesn't flash when recieving from the Atari's(But does
��on the IBM), but it seems it reconizes the printer because when I switch my
��switch box from the Atari to the IBM the Atari complains that there is no
��printer connected.
��
��Is there a driver available to fix this or is there something else to fix
��this?

Some of the HP are said ��Windows optimized��, which means in fact
that nothing else than Windows can use it because it is Windows which makes
all calculations, and the printer seems to understand only Windows langage,
not normal HP-PCL as classic Deskjets.
I know the HP-820 does so�; I'm not sure for the HP-722 C (never heard
of this modele) but the description you did makes me think about that : my
HP-820 behaved exactly like that, even for ASCII-texts !

I'm afraid that, if so (check the handbook for things like ��Windows
optimized��), the only solution is to buy another HP.
The 690 C is working fine�; I think the 870 should work, as it is not
��Windows�� and can be used by a mac (820 can't).

[If you're not at all using Windows on your PC for printing and if it
doesn't work, it would confirm that opinion�; if it works, that's something
else...]

Good luck,

Hello!

With PaCifiST problems you should at first contact the author, Frederic
Gidouin at frederic.gidouin@hol.fr
He'll answer within a few days.

I guess you know his homepage at
www.pacifist.fatal-design.com

So long and Good luck,
Carsten

Yes, it is. Isn't it?
As I live on "this" side of the Atlantic I used to write "colour".
Now I know that I also have to write "programme" then.

Hi, According to "Your Second Manual to the Atari ST" by Andreas Ramos:
Xerox originally developed the mouse in the 1960's and the main parts of the
mouse and windows idea. Apple took those ideas and added their contribution:
menus. Digital Research copied the whole thing and sold it to Atari. Digital
settled out of court to being sued by Apple. Ramos doesn't say when
Microsoft developed windows but implies it was new in April 1988. Cheers,
Nigel Williamson.

Source record: 105869

> If they can distribute them on a BBS, just why can't they do it on the Web ? I
> just can't understand the difference.

The difference is easy. Itï¿½s maintanance. Itï¿½s much easier to maintain a
BBS (especially a MAUS) than to maintain a web server.
And then there is the problem of illegal copies. If someone will only
get the software if he is a registered user of the BBS than it is easier
for a distributor to prevent piracy.
You know what I mean?

> But anyway, I'm sure that the biggest barrier isn't in the means of
> distribution, but is rather the lack of will of most german developers to
> translate their software.

The problem is that it is not very useful to let a German translate the
software to English, French or whatever. So you have to pay a native
speaker for that and they are extremely expensive if they are living in
Germany. You know: Supply and demand.

> exceptions, most german developers are just happy to stay on their home
> market, and don't really care about exporting even to European countries, let
> alone the US or Canada.

Itï¿½s not they wouldnï¿½t be happy to sell a bigger no. of their products
but it is rather difficult to find someone who is able to translate the
software fast and correct.

> as Papyrus, Texel, MagiC, HDDriver, etc, is HUGE. The cost of translation

Think about DISKUS. The author is the same one who developed HDDriver.
But he is neither able to translate the manual on its own nor to pay
someone in advance for doing this.
BTW, I am still waiting for a German version of Extendos Pro or Positive
Image. ;-)

Tschuess,
Frank

Well, as I said in a earlier post, I _was_ able to download the program.
I used CAB 2.5 to do it. Unfortuantely, the distribution agreement for
Infitra disallows distribution of it... you _must_ download it from the
web site.

> BBS (especially a MAUS) than to maintain a web server.

I don't beleive so. There are tools for web site maintenance. All you need is a home page and, say, one page per product, and then a download page. The only one that will change that often is the download page. Really, that's not much harder to do than to stick update disks in envelopes.

> And then there is the problem of illegal copies. If someone will only
> get the software if he is a registered user of the BBS than it is easier
> for a distributor to prevent piracy.
> You know what I mean?
>

You can always put a serial number check to let the program run, or a password to allow access to the download page. Come on, you can see this all the time. Even microsoft asks for a serial number to download patches.

> > But anyway, I'm sure that the biggest barrier isn't in the means of

>

I'm pretty sure there are volunteers who would do it just for a copy of the software. I'm pretty fluent in french and english, but not german, but if I was, I would happily volunteer.

If you can't find a french translator in germany, maybe look for a german translator in france or whatever.

Besides, I'm quite sure that just an english version would be pretty much enough for most users.

> > exceptions, most german developers are just happy to stay on their home

> Image. ;-)
>

Well, as I said, you don't have to translate in all languages. It just
seems to me that if you want to touch an international crowd, an english
version would be enough. You also don't have to translate the complete
manual, a quick user guide can be enough.

The thing is, most people around the world, or at least the computer
litterate popultation, can understand enough english to use a program
(oops, prograMME ;-). this is not the case with German, French or
Russian.

As a frenchman, I prefer french versions, but people here can usually get
on reasonably well with an english version of most programs (except
probably a word processor). I admit that the predominance of english is
somewhat annoying, but it's reality, and there is STRONG demand for
international available software.

Hello to all,

I was given an email earlier this morning from an individual who
gave me a link for the Techstocks website, within the website it
reference that JTS had filed an 8K form for the sale of assets,
specifically Atari to Hasbro Interactive.

I decided the only way to know for sure if this was fact or fiction
was to go to the source, since JTS is a publicly traded I went to the
SEC site at www.sec.gov

So go to www.sec.gov, go to the Edgar Archives, select 8K and type in
JTS for the ticker and Viola!!! You get for February 23, 1998 the sale
of most Atari assests to
Hasbro for (GET THIS!!!) only $5,000,00!!!

Its real, its true and its official, Atari has been
sold!!!!!!!!!!!!!!!!!!!!!!!!!!!!

heh, I bought Windows286{Windows2.0} (ran on my 8086) back in 1987, so
Windows1.0 probably came out around 1985. It was pretty pathetic,
Ventura Publishers' GEM interface was much more useful.

4947. OH NO! Newsie?

Newsgroup: comp.sys.atari.st
Date: 1998-03-11 00:00:00 UTC
From: janhaha@online.no
Message-ID: <6e6oukbbc1@news1.sol.no>
Source record: 105885

Oh no!!!!!! Now I have experienced it too!
Is it really newsie.

I had a clean up in the newsgroups on my harddrive this morning!
For the first time i deleted newmailings from within the newsfolder
with the "del"-key. (I have until now deleted them manually by
throwing them in the waste bin from their folders..)

I also installed a new 700MB SCSI disk Micropolis and tried to run
bigdos3.0 because i want to use the disk as a source for
cd-recording..

Evertything seemed fine until I rebooted to night!

Nearly 900 lost clusters on the c-drive and lots and lots of trouble.
I am very glad I had "a mirror" of my bootdrive on another driave and
partition! I saved me hours of work.

Is it really Newsie? I really like that (this) program but now I will
look out for other news ftp and email-programs.

TO NIGHT!

Please let me know what you think
I have reinstalled my c-drive
I dont run big-dis until I know what has happend
I dont use the delete-kety from within the nowsgroups
I use newsie just because I have to until I have dl-et som other
progs!
I have unintstalled my micropolis-drive

And
I am waiting for you to tell me what happened.

4950. SoftPC Installation Guide

Newsgroup: comp.sys.atari.st
Date: 1998-03-11 00:00:00 UTC
From: guitarra@afn.org
Message-ID: <6e6npqkam1@maya.ece.ufl.edu>
Source record: 105888

This is one of the most solid programs I have ever run on my computer.
I limited SoftPC under Geneva to 2 megs. It is really a nice program
to run dos programs on your Atari.

DETAILED INTRUCTIONS ON HOW TO SET UP and USE SOFTPC FOR ATARI
Available on Power CD From Compo Software (TOAD COMPUTERS)

by Raymond Lohengrin

UNZIP FILE softPC and copy SoftPC folder to your C: Partition. Inside
the softPC folder you will find a zip file called C_DRIVE.ZIP. Unzip
this file and copy the file C_DRIVE.HDF to partition D: or just keep
it in the SoftPC folder. (this folder is a virtual IBM PC C: dive)

SoftPC looks at the file C_DIVE.HDF as a PC C: DRIVE. All files that
you copy from DOS to C: will be stored in the HDF file.

Loading SoftPC.

To load SoftPC run PCRUN.PRG. After about 5 to 15 seconds you will see a
Black screen with GEM menues on top. This GEM menus are to configure
SoftPC and they are available at all times. If you have any problems
returning to DOS just select from the FILE menu RESET PC and then
abort. This trick can be used at any time to "WAKE UP" SoftPC.

The Gem menuw PC drives is used to tell SoftPC where to find its
program folders and wich files will be used as "PC Drives" Remember
that your PC drive C: is not really your Atari C: Drive. When you use
DOS commands to format, write and copy to any DOS Drive (not A: or
B:) you are really refering to your .HDF files.

Select from the PC Drives menu E: HARD DISK to tell SoftPC where your
folder SOFTPC is. (C:\SOFTPC*.*) The path should be set up already.

To configure your PC drives go to the PC DRIVES menu and select C:
HARD DISK. Select your original C_DRIVE file and click OK
To created additional drives, select D: HARD DISK. Then, select
"CREATE". You will need to write the information about the path of
the new HDF file you are creating and its size. Make sure not to
create an HDF file larger than the space available.

Example:
Create a new HDF file called MY-DATA.HDF with a size of 5 megabytes
in size . on partition E: of your Atari Hard Drive.

Select D: HARD DISK from PC Drives menue and then select CREATE.
Type the following.
Disk Name E:\MY-DATA.HDF

Disk Size 05 Megabytes

Click OK.

The new file will be created on partition E: and then you will select
again D: HARD DISK but this time select FILE and locate the file
MY-DATA.HDF. The program will asked to be reset to activate the DRIVE
you have just created.

Now, load DOS from your floppy and at the DOS pront A:\ type "dir"
to list the available files.

Type C:\ and then "dir" to list files on C:\

To copy all file from a:\ to c:\ type a:\ retun and then copy *.* C:\ return.

To format your new created "D:" drive which is really your folder
MY-DATA.HDF"

Type fdisk to run the fdisk program.
After it loads select 5) to change current fixed disk drive.

Enter 2 at the:
"Enter fixed Disk drive Number (1-2).............2"
Use option 1 to create a DOS partition or Logical DOS Partition.
Select "y" for yes to use all the available space.
Press ESC to exit the fdisk program.

At the DOS pront type
format D:
the system will warn you that

"ALL DATA WILL BE ERASED"

Don't Panic this is just refering to your folder My-Data.hdf :-)

After your file is formated (drive D:) guive your new drive a label
like "PROGRAMS"

That is it, you have now a new drive D: available to SoftPC.

At the DOS pront type A:\ and return
Then type copy *.* D:\ to copy all information from a:\ to d:\

You can create as many D: partitions or HDF folders as you like, but
you will have to reset SoftPC for the DHF file to be available.

Enjoy softPC.

Raymond Lohengrin 4/4/96

Some useful DOS Commands:

"dir" List information on Drive
"copy (file name) C:\ Copy the file to C:\
"del" Delete

. Every thing
*.DOC all file ending with DOC
CD (directory or folder name) Chage to a directory Example CD DATA

Other Information.

To return to DOS use Control/Alternate/Delete.
Clr Home Key resets the GEM mouse and takes you back to activates the
GEM Menu.
If you are booting from C:\ make sure not to have a floppy on A:\
If you want to boot from A:\ use a floppy containing DOS.
A great program that makes life on SoftPC easier is Norton Comander.
This program uses "GEM Style" menus to perform file management
functions and also to view and edit files.

Use PCDFMT to format floppys.
to format C:\ to autoload DOS use command

Format C:/s

The Drive will be formated and DOS will be set to AUTOBOOT.

Not sure I want to spoil a surprise so I'll keep this short:

Spoke to a gentleman in the know March 9th and he said that there will be a BIG update this week on the show.

He did say it is moving to Las Vegas and there is going to be a LOT of people attending from the U.S. and overseas. Lots of goodies, contests, vendors, and more. Will even be an auction of hard to find items and other Atari products and a bonafide auctioneer is being considered to take charge of it.

Watch for the update.. its going to be BIG!

Source record: 105924

>>An idea would be to ask around here, what kind of personal experiences people have with the different dealers, then compile the different messages and group them into the different dealers they're talking about on a web page.
>
>>That way, if someone is planning to buy software/hardware etc. from "dealer X" they can check out the web page and see what kind of experiences people have had before them with this dealer. Naturally, if "Dealer X" hasn't delivered, taken people's money etc. they won't be getting any customers (at least not from those having Internet access, reading the web page).
>
>>We could even have a "ratings list" where the best dealers come to the top. This would ofcouse make the dealers work harder to keep us happy, and by doing that they would get even more, happier customers!!!
>
>>So, what do you all think? Is it an idea which is worthwhile? Anyone up for
>the job?
>
>
>Hallvard

Your idea has a lot of merit; in fact in the business community the same type of service is performed and called "The Better Bussiness Bureau". And it does help customers and dealers.

But I must also warn you; the Internet is accessible by anyone with a computer (or WebTV) and it is far, far too easy for one person to slam another person (or business) and make life unjustifably rough for all.

An idea like yours would have to be monitored EXTREMELY close and any "complaints" with a business would have to be investigated fully before being posted as "official" or one could be opening oneself up for legal problems.

I own and operate "The Computer Dungeon", an Atari business that I take great pride and satisfaction in. I treat all my customers honestly and with respect and will always go that extra mile for each and every one. To the best of my knowledge I have never had a complaint with any transaction or sale that I've made; in fact I have a tremendous repeat business.

I'm proud of my business and work hard at it and WOULD NOT want to see my business reputation tarnished in any way because of juvenile pranks or spams that are a way of life on the Internet.

As I said, your idea has lots of merit but whomever decides to undertake the task of operating such as site has got to be very, very careful.

4957. User Group Meeting Notice

Newsgroup: comp.sys.atari.st
Date: 1998-03-11 00:00:00 UTC
From: nickd@enteract.com
Message-ID: <6e531e$i3l@eve.enteract.com>
Source record: 105928
Cross-posted to: comp.sys.atari.8bit,comp.sys.atari.st

The Suburban Chicago ATarians (SCAT) user group will hold its March meeting on Tues. March 17 at 7:30 PM (room open at 7PM), at the College of DuPage, Room K161 (the K building is located on 22nd St. just west of Lambert Rd., in Glen Ellyn). The scheduled demo is: ScanX, the flatbed scanner driver for Atari (ST/etc.) computers. And of course there is always our lively discussion - never a dull moment... ;-)

Everyone is welcome to attend.

For more information, send me E-Mail at one of the addresses below. >>> Note that the first email address has changed since the last time I posted (IIRC). [If this article shows up outside the greater Chicago area, I apologize - the "chi" distribution may not work (at all sites) now. Say, if you're travelling to the Chicago area and will be free that evening, feel free to stop by! :-]

4958. Re: Notator goes wild

Newsgroup: comp.sys.atari.st
Date: 1998-03-11 00:00:00 UTC
From: ag352@chebucto.ns.ca
Message-ID: <6e52od$gg2$1@News.Dal.Ca>
Source record: 105929
Cross-posted to: comp.sys.atari.advocacy,comp.sys.atari.st

My Notator occasionally goes wild too. My unit is a 1040 STe with every upgrade imaginable short of a Pak30 and the big 19" mono display [:-(]

My symptom is the whole-note rests suddenly dividing into a long string of 64th note rests. Sometimes switching off, remove and re-inserting dongle and re-booting cures this.

Also on a couuple of occasions the MIDI info for one (but not all) tracks transposed itself up or down a few steps for playback without showing itself as having been so adjusted on the notation screen. On playback I heard myself saying, `What was I thinking of when I wrote THAT?'

Re-booting cured that as well.

Keep us informed as to your tribulations. Hallvard are you reading this? save some of this for your list as you see fit.....

I've found something that so far works great and works nicely with a conventional mouse - 3M's Precise Mousing Surface pad. My Naksha hasn't been working well with its own pad lately (and of course it NEVER worked with a conventional thick pad). The 3M one (which has a microscopic rough surface) seems to have solved the problem nicely, AND it doesn't take up much desk space (about 7" x 8").

It's not cheap (it retails for around $26.99 in Canada) but Grand & Toy, the Canadian office supply shop, is selling them for $12.99 CDN for the month of March. It's also QUITE popular - I've heard of this product for months, but never saw one until now.

I'm probably going to try some bench tests with this (and maybe even try using a conventional Atari mouse) and maybe write up a review. This is one product you should at least try out.

>Any more specific information would be helpful.

The problem with file corruption is that it often destroys the evidence-
I have one rubbish file in my Newsie partition at present which appeared
when about half the other files disappeared- it reports a ridiculously
large file size (bigger than the whole HDD) but it's locked in some way,
and I can't copy it or delete it. I just have to reinitialise the
partition occasionally and restore everything from a backup.

John, if you have a Iomega Zip drive, I will run Newsie from a Zip disk
until this problem appears, then send you the disk which you can examine
with a disk editor, if that would be any help?

On the undeleted files in OFFLINE, I offered some more evidence in a
followup post- did you see it?

> >Oh boy, you Americans! :-)
> Ahhh, maybe I should have said, "Let's get TRUBEL with it". That doesn't
> have the true meaning though, no soul :)

:-) As you can imagine I donï¿½t understand anything at all. =8-)

> Sorry, Frank, I just don't buy it. Selling software on the Net should be
> less expensive than snail mail. If not, just add in the phone costs.

I donï¿½t understand. As a buyer you have to pay for your telephone bill,
so for me there is no difference between paying for disks or paying for
my own telephone bill.

> True, but what about us other humans scattered all over the Globe. Are we
> not Atarians?

Oh, no. You are ATARIans. Perhaps you are REAL ATARIans. Why? Because it
is harder for you to get the latest software you still use your ATARIs.
So thatï¿½s clear evidence.

> Disks are OLD tech. You know it as well as I do.

That is true. But disks are cheaper.

> The Net Rules! I know I'm right on, dude <g>.

Thatï¿½s wrong. :-)

> I apologize for that. IMHO, if the Marketing problems of Atari software
> worldwide aren't solved soon, there won't be anything to sell. It's the
> Internet that offer's the best solution for everyone.

I know that the internet could be a good solution for a lot of companies
but not for the small companies like ASH or R.O.M. (compared to
Microsoft, Oracle or HP).
At the moment they had to provide both services, disks (for us in
Germany) and Internet (for the rest of the world).

Do YOU want to pay more for ATARI software because of that. See, ATARI
software is a *lot* cheaper than PC software. And you know why!

> used. Look, Egghead Software is in the process of closing ALL it's stores
> and is selling everything on the Net.

Who is Egghead?

> neither do the investors as the stock's up about 30%.

Well, remember the times where the ATARI stock increased about 2400%.
And believe me, not a single stockholder of JTS/ATARI is now happy with
his/her stock.

> >But thatï¿½s just my $0.02.
> Is that in Deutsch Marks, or USA dollars <g>?

:-)

Euro of course. ;-)

Tschuess,
Frank

Hello Charles,

> You almost talked me into buying Geneva :)
> MagX'iC, what's that <hehehe>?

It seems to me that you are a MultiTOS fan?
So, how about considering N.AES?
It is a fast replacement for MultiTOS, based on MinT and the distributor
(Woller GbR) has a website (21th century, you know?) :-)

Tschuess,
Frank

Ah, that's interesting, my archive of SoftPC (on the Compo "Power CD")
doesn't have this file.

What I do have is:

[Z:\FALCON\SOFTPC\FALCON]

Z:\FALCON\SOFTPC\FONTS
Z:\FALCON\SOFTPC\BIOS1.ROM
Z:\FALCON\SOFTPC\BIOS2.ROM
Z:\FALCON\SOFTPC\CMOS.RAM
Z:\FALCON\SOFTPC\LIESMICH
Z:\FALCON\SOFTPC\SOFTPC.CFG
Z:\FALCON\SOFTPC\SOFTPC.PRG
Z:\FALCON\SOFTPC\SOFTPC.RSC

Am I missing some other files apart from the c_disk.zip that you mention?

I must say that the "Liesmich" file isn't the clearest text that I've ever
come across!

Well, it is a possibility that Hasbro could distribute Project X units
made by an outside vendor and choose to use the Atari name...

This makes sense too. First of all the Lynx is by no means outdated
considering how far handheld consoles go these days. Secondly no one
seems to want a Tiger Game.com, maybe they want and Atari Game.com.
Secondly, purchasing two game companies leads me to believe they have
something planned. Perhaps Hasbro will make a console, portable or
standard (or even liscense Project X) and use technology from both
companies or names to form something.

I would think the want the Atari name perhaps for something else. Maybe they want to release the Jaguar 2 and try to beat Playstation, in theory it is more powerful than current consoles and could compete with the next according to the few rumors surrounding it.

one question - has anyone else been having problems with the demo
while running under HD Driver? I've got HD Driver 6, and the RUNNING
demo loads slowly and then crashes as the song loads. Ironically, if I
run it from just my EZ-135 with my hard drive off (and with the EZ-135
booted from floppy) it works just fine.

I'm interested in getting the full release, but wonder if anyone
has had similar problems and has any solutions. I'm sure Uwe Seimet may
have a few ideas what's going on....

Degas Elite uses GDOS, so there's bound to be a printer driver for it or its
Epson equivalent (check your manual for emulations which are perfectly
adequate for Graphics).

Imagecopy started supporting SPU and SPC from v2 and will convert to JPG if
you like, but a suitable alternative would realistically be GIF or TIF
formats. JPG is really more suited to photographic images rather than the
IMG, PI? and SPC formats you've mentioned.

Hey there,

You are correct. Windows 1.0 came out in 1985. My Windows 1.0 manuals are
copyright 1985. And just to set the record straight, this is the only piece
of Microsoft software I keep around. :)

Ummm, my Falcon crashes anytime I try to select an E drive. Dosen't
matter if I try to install it under SoftPC, or if I just change the
config file. I am beginning to think that it might have something to

do with the Afterburner or HD Driver because the crash is a bus error (under MiNT). The C drive file I have boots DOS 5.0 thanks to someone, but I cannot get anyother files installed to format a dos partition. It also refuses to read the floppy. I can read a directory once, but then I get some error that the disk cannot be read.

It does work fine on my NOVA at 1025*768. I just get a CGA screen in the corner. Can SoftPC be made to run in a window with some sort of gadget?

Mike

Well, maybe you could sweet talk her into sending me back my NVDI for
MagiC Mac Disk that they have had for 17 months and my $25.00 upgrade fee.
Remember Spooky Specials? Yea, that was way back then. I finally gave
up with nice mails, calls, nasty calls and mails and reported them to
the Postmaster for mail fraud. David should be hearing from them soon.
I gave up waiting and ordered NVDI for MagiC Mac from ASH, which I
rec'd promptly, thank you.
Toad, may a thousand flees infest your dog Zoe!

Thanks for the info. I read the document and one very interesting part
is
the fact that Hasbro will take the rights to the website domain
"atari.com"
It looks like Hasbro will be using the name Atari for something, but
what
that might be is still up for speculation.

When Atari bought into JTS there were many who said that Atari was DEAD!

It definately looks like some restoration will be happening.

Thank you Hasbro in advance for whatever you may do!

Patrick Mulvey

Hehehee.. I'm not sure I like any of them. Someone wanted to start some
rumors, here is one. I guess you all know of VM-Labs which are supposed to
cooperate with a number of big companies. I have no idea what Hasbro does,
but maybe JHasbro+VM-Labs have something to do with this as well? :-)

Another possibility would be that it would be esier for a seconde company
to buy out the computer part and TOS. As they sold the whole shit for
5 mill, I guess the computer part would be very cheap as I guess this is
not what they were after in the first place.

Well, maybe IBM could buy the computer and release a PPC TOS box, or Compac or
Dell could buy it just for the fun to rival Gateway2000? The price for the
computer part would be a fart in space for those guys. :-)))))

Anyway, here you are.

4988. [Fwd: Purchase of Atari Corp. (division)]]

Newsgroup: comp.sys.atari.st
Date: 1998-03-12 00:00:00 UTC
From: "Harold Alley Jr." <ataripc@2die4.com>
Message-ID: <35078BF4.3695BA2A@2die4.com>
Source record: 105708
Cross-posted to: alt.atari-jaguar.discussion,comp.sys.atari.st

To all fellow Atarians
On March 12, 98 I sent the following email to Hasbro, INC
at>hiw@hasbro.com<. This is the email adress for Hasbro
Interactive. The division which recently purchased Atari division from
JTS Corp. any chance that Atari has for ANY future rests
with us. If a few thousand people were able to save Star Trek from
oblivion with a letter writing campaign to NBC in 1968 what
can and should the loyal few who still believe in her do .... WRITE!!
Together we do have a voice and now should be the time
to use it. Before it truly is too late. Together we Still can make or
voices heard.

To whom this may concern,
Congratulations on the recent acquisition of Atari Corp.

As a member of the generation that was raised on Atari starting in
the late '70s and continuing to the present, I was glad
to hear that you purchased the firm from JTS.
It was with great pain that I witnessed the slow lingering cancer that
ate away at the once great company known as Atari,
Once a household word and cultural Icon, it was nearly destroyed from
within and without by forces that loyal fans worldwide
could not stop. Now with the backing of Hasbro , another major player in
my childhood and in my children, maybe she may
once more rise to the pedestal she held for so many years.

Please do not dismember what is left her, she deserves better.
While her computer technology is outdated, Hundreds of
thousands in the U.S, Canada, and Western Europe continue to use and
support Atari machines, for browsing the web. to
doing serious business and entertainment work. Tweaking their machines
to get performance from them undreamed of by
their creators. Indeed it was with great pleasure that I watched Mick
Fleetwood use his drum vest in the most recent
Fleetwood Mac concert. That vest was created for him by Atari. Her Lynx
game machine is still the finest piece of American
engineering in handheld games, with new games still being released. And
her Jaguar 64 bit game machine was America's
last best hope to recapture the video gaming hearts of americans from
Japan. Again new games are still being released and
planned for this machine. Lack of effective marketing is what nearly
killed these systems and lack of third party support. A

situation made worse by the mass market promotions of its competitors
Sony and Nintendo. And the third party licensing
practices of the competition.

The purpose of this letter is to impress upon you the fact that you
have purchased a diamond mine for the price of a stone
quarry. Atari isn't mined out. Please don't close the door on the
innovation and indeed the ENTIRE industry she created solely
on her own so few years ago.... Revive her before she breathes her last,
it is the only right thing to do.

>can't or don't want to run MiNT, or if you prefer GEM to comandlines.
argh, cab.ovl FOR mint rules, aftp DOES rule, these are GEM prog.
Mintnet HAS gluestik which allows to emulate stik application, so NO
command line here either. Mint = STIK + more. There is no catch here.

However I agree that you have to run mint, which *MIGHT* be a pain for
some.

>> experimenting with Mintnet again. Is it possible that Mintnet will be
>> faster?
>
>I haven't done any comparisons by myself, but there have been several reports
>that STinG is the faster one, possibly because it's less relying on the
>performance of the underlying OS.
who are these people? were they on drug? (kidding).
Mintnet will not be a little faster but a LOT faster than sting.
Basically you can really count on your modem speed here.
It is smooth, run 8 ftp session 2 cab, 1 irc, that will slow down of
course, but consistent. AND STILL VERY fast and smooth. Main thing why
I use mintnet vs stik/sting.
I get some speed like I use to have in singletasking with connect
Zmodem protokol, but with PPP and multitasking, what do I expect more?
;) nothing really.

So, STING IS GREAT ! no doubt about that. However speed is not a
reason why sting is great, NOR the fact that you can use GEM in sting,
as you can also use all gem/stik/sting application with mintnet.

The good thing in sting is that it allows you to connect SIMPLY with a
very light configuration on your computer. (as opposed to mintnet).
2) that sting DOES allow you to use ip masquerading, (as opposed to
mintnet which DOES NOT support).
3) less RAM and more computer are able to run STING compared to
mintnet.
These are the main points you can attribute to sting. but pliz no
speed nor stability.

I wish I could run sting for 9 hours straight. (as opposed to mintnet
;) I wish I would get some 3.2 kb/s ftp with sting (as opposed to
mintnet, on a 38400 modem)
Well bye :)

Well, both really! 'Program' is the American spelling which is becoming more acceptable in English.

If you want to be pedantic 'programme' has a long pedigree and linguistic history. 'Program' (viz. 'color') is a phonetic simplification which has no linguistic roots.

I couldn't get that to work on a Falcon. Then there is Holdit.prg (sp?)

> envelopes.

Well, donï¿½t expect too much from ASH. They are not a huge company like
Microsoft. From what I have heard all their software isnï¿½t developed
inhouse, they are only a distributor.
And believe me, itï¿½s cheaper to pay someone for sticking update disks
into an envelope than for maintaining a webserver. You know: hire and
fire.

> all the time. Even microsoft asks for a serial number to download
> patches.

Oh, come on. Microsoft isnï¿½t an example. They know that there are more
pirated copies of their software than originals but they do not care
because it doesnï¿½t do any harm to them.
The market is much bigger than the ATARI market.
Guess why there is still no online-help for Papyrus?

> Besides, I'm quite sure that just an english version would be pretty much
> enough for most users.

I agree.

> I'm sure there will be volunteers in the Atari community... Wait and
> see...

Thatï¿½s all we can do.

> > BTW, I am still waiting for a German version of Extendos Pro or Positive
> > Image. ;-)
> Well, as I said, you don't have to translate in all languages. It just

One reason why ATARIs are still used in Germany and they have been so
popular is the fact that a lot of software (especially the
documentation) is written in German.
You can be more productive if the software you are using is written in
your native language.

The best way would be, if there were always German, English, French,
Spanish etc. versions available at the same time but thatï¿½s impossible.

On the other hand I believe that it is a pity that some software will be never translated.

> seems to me that if you want to touch an international crowd, an english
> version would be enough. You also don't have to translate the complete
> manual, a quick user guide can be enough.

No. I disagree, a quick user guide might be enough for programs like MPlayer but not for huge applications like Calamus or CAF.

> As a frenchman, I prefer french versions, but people here can usually get

BTW, there is a prejudice that France isnï¿½t famous for writing programs. Why do you think this is so? I think because noone recognizes that there are well-written programs developed in France because they hide their origin.

But things are changing. Now a lot of very good programs appear from France especially for the Falcon and thatï¿½s because first of all the versions are in French then, when the user base grows, the developers decide to build an international version.

Here in Germany we all know that there are more good Falcon-only programs from France than from Germany. ;-)

> on reasonably well with an english version of most programs (except
> probably a word processor).
> I admit that the predominance of english is somewhat annoying,

Thatï¿½s not a problem as long as the German versions will appear earlier than the international versions. ;-)

If they aren't intrested in the computer line or TOS, perhaps we can see
TOS under a open license or even freely aviable. The same goes for the
hardware schematics, sadly there isn't much money left in a computerline
that was abadoned some 5 years ago, even if one as a enthusiast like myself
don't like that fact. Today people buys a PC not a homecomputer... ;-(But
perhaps Hasbro are more open than JTS where.

Just my 2 cents.

Regards..

The one in the root of disk 1? Yes, I read that but it only has some info about VFAT & replacing Xcontrol. Doesn't come close to the info I need. And the annotated magx.inf file is of course in, um...er... German!!! If nothing else I'll give that a run through Ruftrade.

I strongly suggest emailing David Encil at Titan. He is usually very helpful tho' you might need to wait a day or two for a reply.

As far as positioning the nemesis board goes, I used the suggested placing over the hole produced by moving the fan to above the psu (I used a nibber to make a hole big enough in the metal and hot-melt glue to hold the fan (the mounting holes didn't match up) and the nemesis board.

I did all the earthing mods mentioned as well and I'm using a Panasonic 60mS SIMM in my memory upgrade board as recommended.

Lacescan doesn't need any extra drivers to work BTW, it was the Reflex card
in my STFM that was causing a problem with the A4 monitor - I forget now
what the problem was but your driver sorted it in double-quick order.

Long gone to another user who is making good use of the kit I hope.

MagiC 5.x IS really GOOD!
I use it with CAB2.6/PPP-Connect (Can't connect with proxies either...).

But I warn you not to use EASE. Even version 5 does not support background
DMA, as far as I experienced. I use MAGXDESK (included with MagiC), but
the best choice will be jinnee, the new desktop from Application Systems.

Besides EASE will not longer be supported (developed) by ASH.

Hope to have helped you,
Carsten

P.S.: Questions concerning MagiC are welcome.

Well, if that's all they are, I'm afraid they're not doing their job very well then. I don't want to knock ASH or any other germany (I'm thinking about W+L and WB Systemtechnik too, who have some very interesting products), it just seems silly that there is so much demand and so little effort to meet that demand.

> And believe me, it's cheaper to pay someone for sticking update disks

> Guess why there is still no online-help for Papyrus?
>

Alright Old Bill was not a great example, but there are other solutions. You can ask for a licence number to run the program (like twoinone or Marcel, but the program exits instead of running in crippled mode).

Most of the time, even just fax/credit card orders would be great, only you need to provide online information in a language that can be understood worldwide. There are plenty of ways of selling abroad. I've bought products from the UK or from the US several times. I've never bought German stuff, because most of the time there is no english web page.

>

Agreed. But you can be productive if it's a language with which you're
more or less familiar. Everyone knows what "File" means. Only atari users
that are familiar with german software will understand "Datei".

>

hi st/falcon users!

to connect your st/falcon as a server to a real 8bit
like ape you can download the brilliant mouse-driven software
from my homepage...

unfortunatly it uses an own diskimage format and not standard
XFD/ATR...

i coded in omikron-basic a 1st version of a xfd/atr-to-di-converter
but it just works aprox. 80%... but i am working for it...

interested in screenshots and more?

try

http://wwwstud.ira.uka.de/~s_tomczy/dj800.html

bye, heaven/taquart

ps.
included in my package are "dos 2.5", "asskicker demo by shadows"
(>=128k),
"total daze"-demo by tight (>=128k) and my fave macroassembler
"Macro ass xe v4.3" (>=128k)

I included total daze-demo because it uses an own sio-routine and
as it runs perfectly with dj-software it shows 100% compatibility of
the sio-routines... =)

I'm in the market for a falcon--but, I have a few questions: (1) I primarily use my ST's with notator, and I heard that notator won't run on a falcon--is this true? and (2) what is the most powerful Atari that will run notator if not a falcon; (3) Toad computers used to have some new" falcons in stock--can you still get unused ones.

TIA

> > Microsoft. From what I have heard all their software isni¿½t developed
> > inhouse, they are only a distributor.
> Well, if that's all they are, I'm afraid they're not doing their job very
> well then.

Oh, I think they are doing their job well. Keep in mind that they
decided to stay in a small market. And it was a decision forced by the
ATARI community. So if there havenï¿½t been enough sales in the past they
would have switched to the MAC/PC or whatever market.

> I don't want to knock ASH or any other germany (I'm thinking
> about W+L

W+L is just Woller. L left the company.

> and WB Systemtechnik too, who have some very interesting
> products), it just seems silly that there is so much demand and so little
> effort to meet that demand.

I understand but if I drove a company that is only producing things for
the ATARI market I would try to survive not to conquer new markets.

> I agree, but if you're already updating a BBS, it takes what, 10 minutes
> more to go and update an FTP site too ? Then you can reduce the pay of
> the envelope stuffing guy ;-)

;-)

Perhaps this will happen in the future but I believe they are too busy
selling stuff than to change running systems.
Both ASH and R.O.M. didnï¿½t switch to ISDN for their BBSï¿½s because of
that reason.

> Alright Old Bill was not a great example, but there are other solutions.
> You can ask for a licence number to run the program (like twoinone or
> Marcel, but the program exits instead of running in crippled mode).

Thatï¿½s what R.O.M. does with their version of Papyrus or Softbaer with
COMA. But you know what happened to GEM-View, THING, GEM-SZRZ and many
other programs. There are a lot of cracked keys around.

> Most of the time, even just fax/credit card orders would be great, only
> you need to provide online information in a language that can be
> understood worldwide. There are plenty of ways of selling abroad. I've
> bought products from the UK or from the US several times. I've never
> bought German stuff, because most of the time there is no english web
> page.

What I do not understand is, that German companies provide German web
pages but no English ones. Not that you can download a full version of
this site but a downloadable demo of a current program from an English
site would be O.K.
And its not too much effort to translate it.

> > You can be more productive if the software you are using is written in
> > your native language.
> Agreed. But you can be productive if it's a language with which you're
> more or less familiar. Everyone knows what "File" means. Only atari users
> that are familiar with german software will understand "Datei".

No, everyone knows what the second entry in the menubar means. ;-)
But I understand what I mean. I sometimes struggle with words like
ordinateur. :-)

So is there someone who wants to translate German software to English?
I am not able because my English is too bad and most of the native
speakers in England, France, the U.S. or wherever have problems with
words like "Zeichenauswahlbox".

> > The best way would be, if there were always German, English, French,
> > Spanish etc. versions available at the same time but thatï¿½s impossible.
> Well, Microsoft does it! ;-) (only kidding!)

Yeah, and thatï¿½s the reason why their software is sooo perfect. ;-)

> As far is France goes, CAF was never available in french. English was
> though, and it didn't hurt Steinberg's success over here.

Well, the reason might be that CAF was so expensive that everyone
thought it must be a good program. :-)

O.K. Steinberg had success with their program because they had the
resources and the money to do a translation.
Remember the time when the first version of Cubase appeared and nearly
every musician owned an ATARI.

> Funny, it seemed to me that French developers were more famous for their
> vapourware! ;-)

Oh, no. Thatï¿½s not true.
O.K. WenSuite is bad.

But what about MPlayer, Robinsonï¿½s Requiem F030 CD, ISHAR III F030 CD,
POV-RAY-EB-Model-3, all of those phantastic graphic demos for the
Falcon.

BTW, most of the French games are absolutely phantastic. The next one
Iï¿½ll buy is Sheer Agony.

Tschuess,
Frank

It occurs to me that if we all pooled our money together, WE could have bought Atari! C'mon guys, 50 of us with $100K a piece could do it.

Since "disk" is derived from "diskette," how would you get "disc" out of "diskette"?

Note that CDs and CD-ROMs are spelled with "disc" in American English.

You must be one of the very few lucky guys who can use Oasis 2 online.
Most people, including me, can't do this at all. Oh yes I've tried it
very hard but IMHO Oasis 2 is just a piece of sh*t. Just too many
bugs.
Agree Oasis 2 supports Mime, UUE and so one but these things can
nowadays be done with other mailer/newsreaders too.

Okami for instance hasn't any problems with Mime and UUe. One can even
view *gif's* and *jpg's* on the fly.
Mymail handles decoded mails very well either.
The same goes for _Newsie_.

The layoff had to do with Hasbro doing away with unprofitable toy lines and
closing down an out of date factory. Nothing that doesn't happen from time to
time.

> Why wait months when we can start now? :)

Yeah, why not? :) Seriously. not more than three months ago I was reading that Atari and the logo is still one of the most reconized brand names in the world. On par with Coke, and RCA. My pet theory is has Hasbro interactive/Tiger will become Atari for name awareness purposes. Rumors about a year ago were running around that Tiger was developing a console system. I imagine that, even with the bad press Atari has gotten, an Atari system will sell better than a Tiger system. In the short term, I imagine that we'll see retro games with Atari on it. Let me throw a few more logs in the rumor mill. (Mostly from speculation) 1. Notice that midway and WMS were spliting up? I wonder if Atari Games will come available for sale? hmmmmm... 2. Everyone is saying Project X. I think if that was the case, next Generation would be crowing louder. They know who the Project X partners are already. Oh the other hand, maybe thats why they didn't want to say to much back in Janurary. in either case, I'm sure we'll hear it there first. 3. Yars Revenge X... <drool>

I would imagine that the DirecTT060 from Computer Direct in Edmonton,
Alberta, Canada (info@compdirect.com) would be fastest this side
of the pond. Other than that, the Hades/Medusa
(http://www.stud.ee.ethz.ch/~caschwan/medusa.html) or perhaps the
Milan(http://www.atari.de/news.htm,
http://www.emmesoft.com/atari/hardi.htm) would be fast also.
The Hades/DirecTT may be up your alley because of the Star Track,
DSP-card.
availbale in 68040 or 68060 cpu's.

FWIW the nearest I have got to the origin of my name has to do with
1066 - the Norman Conquest and all that!

Word has it that the ancestors came from Caen in Northern France and
were known as the 'de Caen's.

> this one, at least in v2.5x. Isn't it automaticaly \modules ?

There isn't an option in either v1.5 or the demo of v2.0 to set the modules path.

For some reason my old copy of v1.5 didn't like using the \MODULES for the CAB.OVL, although it would load the CAB_JPEG.OVL from there. I downloaded another copy from Flinnys homepage, and that one will use the \MODULES folder correctly, which comes in useful when checking a new version of the CAB.OVL as the overlay in the same folder as CAB.APP is searched for first.

Now I keep a copy of the old v1.27 overlay in \MODULES and the v1.28 in the CAB folder. And when the next version of the overlay is released, v1.28 will go into the folder and v1.29+ will go in the CAB folder.

As I can see, you are still using OKAMI 0.28.
I want to encourage you for moving to the version 1.32 or 1.33.
This new versions are really reliable, very stable and all bugs remaining
from the previous versions are fixed.

The list of new features is very long. The most important (for me) are:
- Full support for ISO-8859-X standard (now I can use on Internet all
18 Polish national characters, w/o any restrictions :-)),
- MIME multipart messages supported (*Base-64 between others!*),
- Address book added,
- Image (gif/jpeg) display (using external program)

Try it, you will love it!
(As I do!)

Thats true, I suppose they could have let the site die if they had no
use for it, but since they took the site it would seem that they plan
on using it for something. I also noticed if I try to go to
http://www.atari.com it just sits hangs, claiming it is connecting, but
nothing becomes of it.

>Carsten
>
>P.S.: Questions concerning MagiC are welcome.

Hi, Carsten -- thanks for that information, especially the fact that EASE will no longer be supported by ASH. Another MagiC user sent me e-mail saying that I should purchase MagiC 5.20 directly from ASH in Germany. Jinnee was also _highly_ recommended, although an English-language version isn't available anywhere (but possible because of its external RSC).

I'll probably just continue with EASE, even with the limitation you mentioned. All the latest ASH stuff is available if one wants it bad enough, but I still prefer to stay with my local dealer, even if it's now 3500 kilometres away <g>. That's where I bought Ease and will buy MagiC (and can't buy Jinnee).

As I think about things, I'll also need to update Kobold. I have v2.5 installed in both NeoDesk and Ease 4 to replace file operations. As I've experienced while running BigDOS, Kobold 2.5 doesn't work with certain partitions (like DOS Zip disks). Thus, during this transition to MagiC, I must somehow purchase the newer Kobold (which isn't available in North America). But perhaps MagiC, because it's a complete OS replacement, has faster GEMDOS routines than TOS 3.06 (very slow), and the need for Kobold wouldn't be so great in my case?

What kind of desktop functions does MAGXDESK provide? Also, do you know if EASE 5 can be used as an AV Server?

So perhaps we should petition Hasbro to make some of the old Atari
8-bit and ST stuff freeware.

Maybe make the custom chip details public, and license theem for free
non-comercial (or limited production, say under 1000 units) use.

Perhaps relase the source for the various operating systems under
something like the Netscape Public License.

I think we should think about what they could do that would:
a) make us hobiests happy
b) not provide any advantage to their competitors
c) not deprive them of potential future revenue
d) not cost them much of anything to release

5054. STING and FTP

Newsgroup: comp.sys.atari.st
Date: 1998-03-12 00:00:00 UTC
From: rosco@game-master.com
Message-ID: <CMZN.18$7z2.438749@wagner.videotron.net>
Source record: 105774

I DL'd the latest modules from Peters homepage today, but I continue
to have problems with FTP using STiNG.

These are the results from a DL from nic.funet.fi:

gfash105.lzh size = 45721 received OK
aftp13b1.zip size = 138795 corrupted
(CRC failure on unzipping)

The statistics box in the dialer shows the following:

ICMP dropped 0
TCP dropped 10
UDP dropped 0
Resolver dropped 0
Modem 2 dropped 0

The DEFAULT.CFG of STING shows ALLOCMEM = 100000. Is this the
problem? I'm usually (not always) able to DL files that are less
than 100K.

Other stuff from DEFAULT.CFG:

TCP_PORT = 1024
MSS = 2000
RCV_WND = 5000
DEF_RTT = 50
DEF_TTL = 128
TCP_ICMP = 1

I'm using a MegaSTE with a GVC 28800 modem in modem2. I have
absolutely no problems with DL's using ZMODEM. Fortunately my ISP
allows FTP through their BBS (and hence ZMODEM), but it would be nice
to be able to use the WEB software.

Well, no, not really ;-)

You have to be careful to distinguish between the French-like
spellings introduced to UK English during the entente cordiale of
Queen Victoria's day and the simplification of spelling in US English
(color, dialog) started by one B. Franklin.

(speculation)
10. Hasbro wants to sue somebody because they are copyright freaks. (Nobody interested in Atari has any money, so they can't get any money.)
Comment on sale of Atari to Hasbro.
From my point of view, it means that a large, active (in Atari) corporation now owns the rights to all Atari copyrights.
Being a bit paranoid, I'd suggest that any sites carrying Pac-Man, Star Raiders, or any other Atari held product should think about what Hasbro might want to do with those products, ie. be careful about having Atari products up for download. They may justifiably say such activities interfere with their ability to make a profit, even if the activities are without profit motive.

Guys,

In all seriousness, the Jaguar is DEAD, it will not be revived, there
wont be a Jag II, forget any hopes on that, there is a possibility
(slim) for the Lynx though. If there will be
a console system it will be a Project X console or this rumor of a 68040
console, but
guys get it through your heads, Jag is DEAD. I love my Jag but its
DEAD. Look for
Retro PC Atari titles and titles for other systems, and hope for a
Project X licensing with
Atari on the case and Atari Retro Project X software, THAT is the only
reality here.

We all love the Jag, but it is DEAD, get used to it, no Jag in the
future.

Perhaps the Atari 26000 ??? Maybe.

Curt

I doubt it. After all, why pay $5 million for all of the rights just to avoid licensing one of Atari's patents? Nintendo, Sega, and Sony are always bumping into one or more of Atari's patents every day, yet this doesn't bother them one bit.

>2) Hasbro is only interested in the game franchises so that they can make

>faster?

In working setups, where both systems are configured correctly, MiNTnet
and STiNG ought to be about equal. Of course, the question seems to be
how to arrive at a correct setup... I've been using HSModem 0.6, MiNTnet
1.01, and pppd 2.2.0f with a Motorola ModemSurfr'56k with no problems on
my TT. File transfers range from as low as 3KB/sec up to 10KB/sec, depending
on content, compression, and network load. (I use Serial 2 on the TT, set at
115.2kbps.)

> Also, is there an updated self installing Mintnet installation or
>kit? I haven't been able to locate a clearly documented install for
>Mintnet yet.

I haven't seen or heard of any. We'll have to work on bringing this up
to date...

I apologize if this sounds rude, as I don't intend it that way.

What amounts to the changing of hands of Atari ownership, IMHO, is pretty darn relevant to any Atari-related newsgroup. I would imagine that most Atari fans were elated at the news. Even though I don't know what plans Hasbro has for their newly acquired Atari properties (which, BTW, does include the ST line), I'd bet my bottom dollar that it's a whole hell of a lot more than what JTS has done.

I don't blame anyone one bit for crossposting. To an Atari aficionado, this is front page news; it deserves to be seen by anyone who shares even a remote interest in anything to do with Atari.

I believe the resolution of TT High exceeds the specs on the NEC. Also,
you would have to find some way to let the TT know it needs to run in TT
high. Isn't there a mono detect pin like on the SM124?

DC> I must say that the "Liesmich" file isn't the clearest text that I've
DC> ever come across!

Hi again, Derryck,

looks like you have no HDF files...

What you need at least is MS-DOS 3.10, 3.20 or 3.30.
Then create a HDF file in the "Drives-menu", next you have to format it (explained in my previous msg), then put all DOS files in a DOS directory, ad an Autoexec.bat and a config.sys. The config.sys should at least have a line "device=c:\insignia\host.sys" and you probably need this file as well...

Then an autoexec.bat should have in its "path" line a reference to c:\dos and c:\insignia too, since there should be a directory "insignia" on c: as well, which should contain a mouse.com, fsadrive.com, host.sys, config.sys and an autoexec.bat.

My idea is you can do without the fsadrive.com, in that case you wouldn't be able to use the FSA feature (stands for File System Architecture, which let you use an Atari partition/folder/CD-ROM for drive E:.

I really don't know what happens if you don't have this Insignia folder with the Host.sys and Fsadrive.com... could be it simply won't work at all!

The "liesmich" file is crappy indeed, but it states that you have to "format" a newly created drive before you can use it... Didn't know that until I came

across this file anyway. It works however, with FDISK I could get a 32Mb drive going :-)

I just looked into this Softpc.lzh file I once picked up, it appears to have no HDF files at all. I could do the following, since I don't have an Internet account:
create a ZIP with the relevant Insignia files/folders and ask some friend to put it on his homepage. All you need to do then is create an HDF file yourself, "format" it and *install* DOS onto it. Next add the Insignia folder and files and you should be into business...
I just tried to arc one of these HDF files, but a 5 Mb drive will still be over 2 Megs when crunched. I think a ZIPpie with the relevant files would only be a few k's. If you can get SoftPC running first (from a systemfloppy or so) that would do the trick, I guess. The problem is (at least, it wasn't clear from your msg) can you get SoftPC running at the moment? As long as you don't, there's no way to get on to the HDF "drives" and you still will be nowhere... You need at least to be in DOS, so to speak.

Il vaut mieux poster en anglais dans les newsgroups internationaux, sinon
c'est un peu mal vu. Si tu as des probl?mes avec l'anglais, mieux vaut s'en
tenir ? fr.comp.sys.atari.

```
Quick translation for the french-impaired (how I love these politically
corrected statements!).

"What colour printer will work with a 1040STF, are there any specific
drivers that I'll need ?"

Actually, any standard printer should do as long as it's not one of those
"windows only" things. As far as drivers go, it all depends what software
you're using. Most programs require some version of GDOS to print, so you
need a GDOS printer driver. I don't know where is a good repository of
these.

Cheers,
Nick

: 5 million is chump change for Hasbro, especially after just having
: purchased Tiger Electronics last month (Feb 9th) for 335 million.
: Which leads me to....

Atually, for all that Atari embodies, $5 million is dirt cheap. The
question is, did they finally get rid of the Tramiel family...

: My conspiratorial mind is highly curious if there might end up being
: some form of game.com / Atari collaboration now. Perhaps use the Lynx
: technology to give the Com a much-needed shot in the arm?

Why would they want to do something with the Lynx, although it probably
was the cheapest portable game technology they could get, could make them
cheap now...

: Why wait months when we can start now? :)

Basically I see three scenarios....

1) They wanted the games, to follow the froger path...
2) They wanted the name for a new game system or other application...
3) They couldn't pass on the price with all of the pack ins they are
getting.... all of Ataris technology and patents for the last 20 years....

The usual problem is that some modern printers rely heavily on the resources provided by a PC and won't function on an Atari (GDI printers). I don't know of yours is one of these.

>The printers light doesn't flash when recieving from the Atari's(But does
>on the IBM), but it seems it reconizes the printer because when I switch my
>switch box from the Atari to the IBM the Atari complains that there is no
>printer connected.

Are you sure that the printer lead from the Atari is OK, perhaps you could try using the one from the PC as you know this one works?

>Is there a driver available to fix this or is there something else to fix
>this?

You should be able to print a text file from the desktop by double-clicking it and choosing 'Print', no printer driver needed.

Otherwise (and assuming that the printer is now working), choosing printer drivers is a question of matching what you have in the way of HP drivers to best match the capabilities of your printer. All Deskjet or Laserjet drivers ought to work.

There was something on these lines in a hypertext called something like
"chips" or similar, I didn't find the instructions clear enough to go ahead
with the mod so decided on the method I posted earlier.

>I did the patch and it worked fine.
>I can find the article if you are interested.

Worth posting here if you've the time! :-))

Actually there is a country on the "other" side of the Atlantic
that also spells it 'colour' and 'programme'
It's really only one country that persists on spelling
according to how Daniel Webster felt when he woke up that
morning.
Since it is an empire, that probably also accounts for its
continued use of the "Imperial" measurement system also,
rather than the more accurate metric system! :)

>text file equivelant of it right away.

I don't know if the following prg's while do what you ask but anyway
these are all HTML-ASCII converters.

FirST HTML: 1sthtml.app: a small French program
htmlhelp.prg: a prg from Matthias Jaap. Can also convert special
characters between Atari, Windows and HTML characters
html.mdl: This is a module for Zeig's mir (looknsee.prg).

I'm not sure but I think all these utilities can be found on the
Belgian ftp-site 193.190.205.13 archive/atari/incoming
If not let me know and I'll upload them.

I think it is incorrect to say that the metric system is 'more accurate' than the Imperial system. One is as accurate as the other. What is probably true is that the Imperial system of fractions for measuring length (half, quarter, eighths, sixteenths etc) is probably much easier to use in real life. Certainly if I do any DIY I tend to use the Imperial system.

I recall reading somewhere a comment that a compromise would be to use fractions in the metric system.

I've just tried the Jinnee demo for the first time... very, very nice (somewhat like EASE yet different). This would be worth waiting for, once System Solutions makes it available to the English market. For what the Ease 5 upgrade will cost, I can almost buy Jinnee. And if MagXDesk is more than adequate, as you seem to say, waiting for the new desktop will be easier.

But I've recently been told that MagiC 5 has a display bug in high-color mode, which was fixed in 5.20. This wouldn't be good since I'm running a Nova and rarely see 256-color mode. Is there anyone running 5.11 (the most current available to me) with a graphics card and could substantiate the display bug?

5099. Problems with STING and FTP

Newsgroup: comp.sys.atari.st
Date: 1998-03-13 00:00:00 UTC
From: rosco@game-master.com
Message-ID: <oLiO.7$c71.67259@wagner.videotron.net>
Source record: 105611

I DL'd the latest modules from Peters homepage today, but I continue
to have problems with FTP using STiNG.

These are the results from a DL from nic.funet.fi:

gfash105.lzh size = 45721 received OK
aftp13b1.zip size = 138795 corrupted
(CRC failure on unzipping)

The statistics box in the dialer shows the following:

ICMP dropped 0
TCP dropped 10
UDP dropped 0
Resolver dropped 0
Modem 2 dropped 0

The DEFAULT.CFG of STING shows ALLOCMEM = 100000. Is this the
problem? I'm usually (not always) able to DL files that are less
than 100K.

Other stuff from DEFAULT.CFG:

TCP_PORT = 1024
MSS = 2000
RCV_WND = 5000
DEF_RTT = 50
DEF_TTL = 128
TCP_ICMP = 1

I'm using a MegaSTE with a GVC 28800 modem in modem2. I have
absolutely no problems with DL's using ZMODEM. Fortunately my ISP
allows FTP through their BBS (and hence ZMODEM), but it would be nice
to be able to use the WEB software.

That's funny! I wasn't aware the Security and Exchanage Commission was in the habit of posting rumors (especially in the form of legal documents).

Did you glue the Nemesis board to the plastic case bottom, or to the fan
bracket? Did you remove the fan bracket? Would it be useful to leave it
there as an RF shield/cover for the Nemesis?
>
> I did all the earthing mods mentioned as well

I did these too.

and I'm using a Panasonic 60mS

I have a generic SIMM in the Wizztronic board. It is actually less noisy
with Nemesis than with the Atari OEM 1MB board.

Yes. Jinnee's icons looks really awful in true-colour on a Nova with
any MagiC-version less than 5.20. It's not only Jinnee that's
affected, but it's the most annoying one since it's on the screen all
the time...

Think about it, guys. Didn't Project X's Jeff Minter state they had the backing of a MAJOR company at some point? Who's to say that major company wasn't HASBRO? If you think like I do, then I think you can start to see some sort of correlation here.

1) Project X is created by a bunch of former Atari Employees and aficiandos.

2) Project X becomes a rality, but is still secret, teasing us with the line: "We have the backing of a MAJOR corporation..." And, they're waiting for the right time to release it.

3) HASBRO buys Atari for $5,000,000. Hasbro is a huge company.

4) Hasbro now has the Atari name, products, trademarks, et al.

Theoretically, Hasbro could be that huge company Project X is signing onto, and they were working between Project X and JTS to get the name and the products so these former employees could use the Atari name on their new Project X. Granted, Atari isn't exactly an unsoiled name in the industry after the Tramiels got done with it, but if Hasbro and Project X can work this properly, I think it'd be a valid shot. This is also considering Hasbro would have the money to do an all-out advertising campaign, comparable to those of Sony and Nintendo. Enter the Lynx. The Lynx never had the following it could have had, and, being a color handheld with more power than any other, Hasbro has the library of games as well as the technology and advertising capability to really kick the Lynx's ass back into the ring. Also, third-party developers would be more inclined to develop for a well-advertised system, because it lowers the possibility of taking a loss on the venture. And...if Hasbro played their cards right, the Atari Jaguar could be resurrected as a 'low-cost gaming alternative' to the current array of systems. Open up the market for public-domain development materials on a larger-scale. It's a marketting idea for geeks, I know, but it'd reap rewards as being educational AND fun. And just think of all the developers that never gave the Jaguar a chance but could really get their name out on a larger scale if the Jaguar was indeed advertised and its games would get published on a regular basis? With a two-tiered philosophy (low-cost vs. premium) including Tiger Electronic's Game.com (low cost), Lynx (premium), Jaguar (low-cost), and the almighty Project X (premium), there's no doubt that they'd reap rewards off such a deal. The right time is now, people.

If this is some sort of underlying conspiracy, let the conspiracy begin!

My experience with Woller (formerly Woller & Link) is the exact
opposite. I ordered some hardware from them in July last year, and
since they couldn't accept credit card or COD I sent them a cheque.
After heaps of emails and a couple of faxes (which Konstantin Woller
almost never answered) I finally got *something*.

The hardware I ordered could probably not be delivered ("lost in the
mail"), and refunding me was apparently out of the question. So a good
week ago I received some software from them, at a *very* high price.

I will not recommend dealing with Woller, and if you do then *insist*
on using credit card or COD!

> Falcon 040-N.AES 1.2:o)

Just curious, did you get N.AES 1.2 or 1.1.7? I was a bit disappointed
when the CD labeled 'N.AES 1.2' actually contained 1.1.7... And large
parts of the CD is unreadable :-(I've sent a mail to Konstantin
Woller about this, but so far no replies (surprise!).

I don't have a graphics card, but I run MagiC 5.11 in Falcon high color quite
often (it's the only way I surf the Web, view pictures, etc.), and I don't
know of any such display bug.

Toad is Zero because Toad is no longer in the Atari business. Having left the market nearly 3 months ago. Having been to Toads store recently I can honestly state that what they have left only fills a closet. ie NO machines, mostly old software and a few boxes of Falcon software left....

Please read carefully. I said "ALMOST none of all them uses GEM".

> Mintnet HAS gluestik which allows to emulate stik application, so NO
> command line here either. Mint = STIK + more. There is no catch here.

I was talking of *native* MiNTnet programs. After all, if someone has used
neither MiNT nor MiNTnet before, but wants to run STiK / STinG clients, I
can see no reason at all to choose the complicated path of installing all
MiNT, then MiNTnet, then GlueSTiK.

>>> experimenting with Mintnet again. Is it possible that Mintnet will be
>>> faster?
>>
>>I haven't done any comparisons by myself, but there have been several reports
>>that STinG is the faster one, possibly because it's less relying on the

> who are these people? were they on drug? (kidding).
> Mintnet will not be a little faster but a LOT faster than sting.
> Basically you can really count on your modem speed here.

Dunno what you've done, but STinG delivers all speed the modem possibly
could do. FTPing compressed archives, I have over 1.7 kB/s with 14400 bps
modems and about 4 kB/s with 33600bps modems. So please check your setup
first before stating such things.

> It is smooth, run 8 ftp session 2 cab, 1 irc, that will slow down of
> course, but consistent.

No problem with StinG.

> These are the main points you can attribute to sting. but pliz no
> speed nor stability.

Speed, see above. Stability ? What about this :

Ronald Andersson (the autor of the IP masquerade for STinG) reported he
had used a machine with STinG as a router, and then ran some buggy appli-
cation that crashed the machine entirely (no mouse movement anymore).
The machine was dead except for the router function, which proceeded as
if nothing happened. MiNTnet won't achieve that.

I believe nobody can complain about stability of current STinG. I can network with it for hours, without crashes. However there are some clients that are not precisely bugfree ;-) The other day people could see me hanging around on IRC for almost three hours, while I was FTPing, surfing, telneting at the same time (Dunno yet how I'll pay that phone bill ;-)).

> ;) I wish I would get some 3.2 kb/s ftp with sting (as opposed to
> mintnet, on a 38400 modem)

You never can that, as there are no 38400 modems. But you can have 4 kB/s with 33600 bps modems.

Cheers Peter

Hi Harry

>Isn't security for credit card details still an issue over the Net? I wasn't
>sure it was solved yet, but I'm not up to date with this...

Well, how many people buy stuff over the phone using a cedit card,
relaying their details over a phone line? That method is a lot more
unsafe than internet credit card stuff by simple email.

That said Secure Shell technologies such as SSL are very safe.

On-line transactions is the way to go for anyone really - E-Commerce
is ready for a massive boost.

Mime handles Base-64

As for .exe - either you need a PC and Windows95/NT to run it, or you simply rename the file to a .lzh (some Europeans change the extension to exe for some reason!) and then use LHArc to unpack.

hundreds of Atari users who use and registered ESS-Code can't be wrong :-))

I've been using Logic 2.5 on a STe and a Mega STe; it's quite
stable, but it does have a few critical (ie: bomb inducing)
things you have to stay away from. The score editing is really
painful at 8MHtz, but is tolerable at 16MHz. On a Falcon, it
should be just fine.

As for support, don't count on it. Emagic has been busy
re-tooling for Windows, as the PC has 95% of the market share of
computers (the Mac only has 5%; the Atari's ???).

If you're not moving to another platform yet, my suggestion is
get it. In spite of the few bugs I've encountered, its 95%
functional, and does now supercede Notator in every way.

My two cents,

Steve

The Lynx is probably one of the primary reasons for the purchase. It's not really outdated when you compare it to the LameBoy.

You all might want to check out Jaguar Interactive II. There's someone there (who I believe is from Hasbro) posting much information on this deal. The Lynx is definitely part of it too...

As far as Notator SL goes, there is a big question there. I was told not to get the 16mHz ICD AdSpeed card installed in my 1040 because of presumed conflicts with Notator. Well I got it to work although I have a special boot routine disabling caches and whatever for MIDI usage.

Hallvard Tangeraas in Norway has found a way to run Notator on his MagiC-equipped Atari.

NOBODY has ever mentioned success at running Notator on any machine witht the 68030 processor however, be they TT of Falcon owners.

The Pak 30 upgrade board is supposed to have a native 68000 mode according to the OEM propaganda. HOWEVER nobody who has such an upgrade (they are relatively rare among the Atari community) has tried to run Notator SL and reported back to us here on comp.sys.atari.st.

Until such a reply to that effect gets posted, the Mega STe is tyhe most advanced form of Atari computer that yu can own and still run that MIDI software you like.

Since HDDRIVER 7.1 you don't need Big-DOS or MagiC anymore if you only
want a single DOS compatible partition. In this case you can create a
partition that is simultaneously DOS and TOS compatible with HDDRUTIL.

Hi Stephen,
Here's what info I found:
Using a parallel port ZIP drive with any Atari computer is very difficult
because of the lack of several signals in Atari's implementation of the
parallel port. There is however a new parallel port interface that plugs
into the cartridge port of Atari computers, available from Woller+Link
(Germany).
Woller + Link
http://www.inx.de/w+l/atari.htm
Zip Drive FAQ
ftp://ftp.uni-paderborn.de/atari/infos/zipdrive.faq
SCSI versions of ZIPs and CD-ROMS are recommended, so that you can use a
SCSI host adapter
Check out the links above, they will answer your question.
Good Luck,

Has there ever been a device built which could perform high-speed networking between a PC and an Atari ST? Is Ethernet possible? If not would it be possible to build my own custom device? What about over parallel port? I understand the ST's parallel port is not birectional, but what about interfacing the ST's cartridge or hard drive ports to the parallel port on the PC?

Can any hardware geeks out there help me? I'm sure something like this must have been built in the past...

MagXDesk can actually do most things. It's very fast (I can't figure out how MagXDesk can draw the icons as fast as it does) and capable. It's also very small and does't take up much memory at all. The only thing I have against it is the keyboard shortcuts which are not the same as the regular Atari desktop and can't be configured.

Well I guess it depends. If it's about translating a complete package
with docs and program it can be to much, but if you are only talking
about the resource file and maybe a short description file, I think
there are many who would like to help. Maybe a free copy of the program
would be a nice bonus for the work as well. If I got a free copy I
would certainly try to help as much as I can. I'm not an expert at
english either but a resource file isn't to hard to translate and
that is usually enough.

My only guess is to make sure that tabs are used the same way through the whole
conversion process.

5148. Looking for TExt Editor for Atari

Newsgroup: comp.sys.atari.st
Date: 1998-03-13 00:00:00 UTC
From: Frederic Patron <Lineic@Lineic.com>
Message-ID: <6eb97i$e8r$1@peuplier.wanadoo.fr>
Source record: 105667

Hello
I am looking for a small text editor (like word for example)
wich can be used in 1 disk (720 ko or 1.44) on one 1040 stf

thanks wou very much

please be quick
bybye

5149. Migraph Wand, OCR for sale

Newsgroup: comp.sys.atari.st
Date: 1998-03-13 00:00:00 UTC
From: kvandellen@provide.net
Message-ID: <6ebaaodir1@news.provide.net>
Source record: 105668

I have a MiGraph hand scanner and a wand with cradle (sheet feeder) I'd like to sell. There is only one cartridge for the two scanners, but two power supplies. I also have the MiGraph Optical Character Recognition program.

Please drop me an e-mail if you are interested in these products. I'll have to let the market set the price. I don't know what they're going for nowadays. (I think I should sell them pretty much as a package, though I could sell the hand scanner and its power supply separately to someone who already has or can get the cartridge.)

Send e-mail or call (313) 821-5706.

Ken Van Dellen

I'm in Grosse Pointe Park, MI, about 5 mi. NE of Windsor, ON, and would be happy to meet a Canadian buyer in Windsor, London, etc., for a cash sale.

>Has there ever been a device built which could perform high-speed
>networking between a PC and an Atari ST? Is Ethernet possible?

Yes, there are some Ethernet solutions.

There was a project to attach a PC parallel port ethernet adapter to the ST
cartridge port which is on the net, but the ethernet adapters are expensive &
hard to get.

There is also somebody working on a ASCI port ethernet adapter.

If not
>would it be possible to build my own custom device?

Yes if you know how, probably better to use one of the ready solutions.

What about over
>parallel port? I understand the ST's parallel port is not birectional,

It is bidirectional, but lacks some control pins, that's why the PC adapters
had to be attached to the cartridge port (with some control logic also).

>but what about interfacing the ST's cartridge or hard drive ports to the
>parallel port on the PC?

I assume you mean direct attachment of the ST ports to the PC ports. There is
a transfer program which links ST's to PC's called PARCP. It's really an FTP
solution, but it is fast (at least 40Kbytes/second). Perhaps this may evolve
into a network solution.

Did Hasbro buy Atari's patents? I read the sea doc several times and I don't
think they did.

>
> 2) Hasbro is only interested in the game franchises so that they can make
> games for other systems using Atari owned characters and lisences.

This I think is most likely. I would like to add that I can easily imagine
Hasbro Interactive changing its name to Atari.

>
> 3) Hasbro wants to enter the handheld game market and plans to rerelease

>
> 5) Hasbro wants to enter the home console market and plans to release
> an upgraded Jaguar to compete against the N-64 and PS.

As interesting as those three are, I think Hasbro marketing a Project X or M2
based console under the Atari name much more likely. Lets be honest, even an
upgraded Jag will not have the kick butt hardware needed to compete with
Project X and Sega's next system. As for the Handheld, I don't want to
believe it but i've been thinking. Isn't odd that Nintendo now annouces a new
color game boy (but no release date)? Nintendo had to know before we did.
Game.com was the only serious chalange to Game boy for years, improving its
technology with the purchase of another company should have been something
they were looking out for.

>
> Fantasy: (In order of what I'd most wish for)
>
> 1) Atari will be fully revived and once again take it's rightful place
> as a leader and innovator in the computer and video games industry.

No way. They may become a software maker and maybe a video game hardware maker but I don't think anyone sane would chalange the PC market.

The best case fantasy for me would be: Hasbro Interactive and Tiger Electronics devisions would become Atari under Hasbro. The new Atari would sell software for computer and video game systems, sell the popular cheap LCD games, and release a game system based on Project X.

>They why do all my CDs say "Compact Disc" on them??

This is because Compact Disc is a sort of logo/trademark (don't ask me what sort! ;-)). It was set up when the technology emerged (wasn't it Philips/Sony?), and the British spelling was used, and must remain that way.

Well, I believe that any company can have a superior product and still fail (ie the Atari Falcon, Jaguar, etc.) and you can have any company with greatly inferior products (ie McDonald's Big Macs, the old Ronco inside the egg shell scrambler, etc.) and those companies flourish. One must wonder why. The answer is simple marketing. It's the sharp and shiny packaging and the sales pitch that is more important than the product's quality because that's most peoples first impression about it and that's generally what sells a new product. It's tactics mean getting to peoples emotions to get them fired up with enthusiasm which overrides any shred of common sense required to make a rational decision of the need for this new product.

What? Don't believe me? Then I ask why the hell were so many people sucked into buying pet rocks with pedigree papers? That had to have been the stupidest thing I've ever seen in my life and I was seven years old then and I didn't understand that then and it still astounds me. Oh, by the way, that was also the most successful marketing sceme I believe in history.

What I'm trying to say about Atari is that it was the failure of marketing that strangled that company and its products. It was bad public relations, and promises that were made and not kept that did it. It was a human fault and not the quality of the products. The messages I've seen in another thread spew crap like "Atari is a has-been, when people hear the name Atari they think of their old consoles sitting in the attic collecting dust..." which is not even close to the truth but an incompetent thing to say. We have a whole new generation of people since then that a new Atari machine can be marketed to. It'll be brand new to them and once again if done properly (and I think Hasbro has a better chance to do it than JTS) Atari can once again be a world leader in the industry that it virtually created.

I was always wondering why the Tramiels hooked Atari up with JTS anyway. I mean, what the hell would a hard disk manufacturer want with a company like Atari? The only logical answer since Bally/Midway had Atari Gaming was that JTS may have been interested in Atari's international assets including land and manufacturing and distribution points.

I believe that Hasbro bought Atari for its name because they're developing a new innovation that involves an industry that Atari created and became a household name. I think they know that because of that one issue people recognise the name Atari very well as they can assosiate it with something from their childhood and with the correct marketing it can be much easier selling something to a new generation with and name that the older generation (their parents) remember well.

I can comfirm this point too. When the web "himself" is not overloaded (?)
I can download a compressed file at 3.6 kB/s and have seen on a non
compressed one at least 5 kB/s, when connected at 33600 b/s with DTE at
57600 b/s.

Bye,
/Pascal/

Nah. Considering how desperate JTS is for cash, they could have gotten
the license for said technology much cheaper.

>
> 2) Hasbro is only interested in the game franchises so that they can make
> games for other systems using Atari owned characters and lisences.

This sounds very likely. Regardless of what else Hasbro may do with the
Atari properties, I am quite sure we'll see this.

>
> 3) Hasbro wants to enter the handheld game market and plans to rerelease
> the Lynx.

This also sounds possible to me. Purchasing Tiger shows they have an
interest in the handheld market, and perhaps even gives them a plant or
two to manufacture the Lynx in. Perhaps even the ability to fabricate
their own LCD screens? Should bring down manufacturing costs
considerably!

Wouldn't a faster, higher-resolution Lynx be cool? Woo-hoo! (Imagine a
Lynx with a 320x200 screen, running at double the clock speed, with 3D
support in hardware, and a built-in [or bundled] TV tuner, all for only
$99. I like it!)

But man, I really hope they don't try to sell it as the Tiger Lynx!
Yuck.

>
> 4) Hasbro wants to enter the home console market and plans to rerelease
> the Jaguar as a "budget" home video game console for around $50.

No way, they couldn't manufacture the Jaguar chep enough to really meet
this price point. And the Jaguar's dated technology and poor reputation
would really be unable to compete against the strong current market
share of the PSX and N64. I love my Jaguar, but I'm afaid it is too dead
for this.

>
> 5) Hasbro wants to enter the home console market and plans to release
> an upgraded Jaguar to compete against the N-64 and PS.

Well, the Jaguar II design (AKA Project Midsummer) was completed, and
was supposedly quite powerful. I believe the hardware could compete if
they came up with some good software for it. But I would sooner bet that
Hasbro is a Project X licensee then say they intend to revive the
Midsummer architecture.

>
> Fantasy: (In order of what I'd most wish for)
>
> 1) Atari will be fully revived and once again take it's rightful place
> as a leader and innovator in the computer and video games industry.

Any notion of Hasbro putting the Atari logo on a piece of hardware
pretty much goes hand-in-hand with this one!

>
> 2) Hasbro wants to make a very cheap hand held game machine. What they

> for under $30.

Never happen. And personally, I'd rather see the Lynx come back. Though
it would be cool to see a 2600/7800 emulator for the Lynx. You could
easily cram a couple dozen games on a single Lynx cart, along with the
emu software. (Hey, it could happen - the Lynx does have a 6502-based
CPU, after all!)

If you have two drives, an ST, and an extra drive cable you could try
the Blitz copy system. You should be able to find info on the FTP sites.
It requires that you make a cable.

I remember from my adolecent pirateing days that it copies just about
anything :-)

BDC> thanx, i now have the c:drive autobooting ok.
BDC> BUT, i cant get the E: disk to be recognized. Any clues?
BDC> Also, were any keypresses remapped for pgup/pgsown?

Hi Boris,

I guess its gotta do something with the Insignia files on my disk and you probably don't have... there should be a FSADRIVE.COM and HOST.SYS in an INSIGNIA <DIR> on the disk too... Maybe even more files, I wrote this to Derryck Croker already.

As for the remapped keys:

When you boot any PC, it will have NUM LOCK on (light's on).
So does Soft PC. If you kick that out with (on the Num pad, the following keys stand for:

1 = END
7 = HOME
3 = PAGE DN
9 = PAGE UP
0 = INS
. = DEL

If you leave NUM LOCK on, you should hit the keys with SFT to make use of these functions.

Furthermore, the) on the Num pad = SCROLL LOCK and the \ is produced by the # key.

Hi Mike,

It mite have to do with GETREZ_4.PRG, which should be in the Autofolder.
Another thing (more likely) is that you too don't have these Insignia files
FSADRIVE.COM and HOST.SYS in an Insignia directory on the C: drive.
MG>
MG> It does work fine on my NOVA at 1025*768. I just get a CGA screen in
MG> the corner. Can SoftPC be made to run in a window with some sort of

I've always been under the impression that SoftPC *was* running in a
GEM-window, because of the menubar. Since it runs only on 640x480x16 screens
and NOT on my Matrixcard, I never tried to move its window.

Most of the time I run in 832x608xTC mode and to use SoftPC I have to reboot
without Magic into TT-med.

>
> I see that from John's post, Germany has a 85ms suggested limit. Is that
> true? I'm way beyond that :)

With the numbers, it's the same trouble as with the register itself. The
meaning differs from modem to modem. So the table given by John Logan may
be true for his modem, but it's not for others. Even if your modem assigns
the same function to the register S11, equal number will cause different
dialing speeds.

It's a bit difficult to compare by the term "gatlin gun" (Don't you mean
"Ratlin Gun" instead ?). My modems dial about ten digits a second even
without any setting of S registers. So I surely cannot complain about
dialing speed.

Cheers Peter

Yes, it was Phillips/Sony. So it's mostly german/japanese, and people should
be glad that the word "disc" was used instead of german "Scheibe" or even the
japanese translation ;-)

Do a test using Modem 1 for connecting the modem to. Many Mega STEs have
a hardware bug that causes corrupted data, that might by some coincidence
not strike with Zmodem. It can be fixed by replacing a PAL by a GAL.

I just hope you did many downloads of several files, to make sure it's not
the file on the server that's corrupted, or the server that behaves wrong.
You did not say which FTP client you used, you should try another one too
to make sure it's not that client.

Cheers Peter

Surely the MAGX.INF file is documented in the english manual on pages 41-44 -
isn't it? I agree it's not complete, but the majority of it's there.
Additions in v5.11, like VFAT, are in that txt file.

The boot resolution is handled in the #_DEV line in MAGX.INF - not entirely
sure whether this does the trick when used with Thing too...

AIUI the info required for the #_DEV line follows the following format:

#_DEV 5 16385

The first number (5) matches the resolution as detailed in ASSIGN.SYS.
The second number is to do with the Falcon screen resolution - it is
documented in Modern Atari Systems Software.

bit meaning
==== =======
2+1+0 Bits per pixel (0=1bpp, 1=2, 2=4, 3=8, 4=16)
3 40-column
4 VGA
5 PAL
6 Overscan
7 ST compatibility
8 Line doubling
9-15 Reserved for future expansion

d> And the annotated magx.inf file is of course in, um...er... German!!!
d> If nothing else I'll give that a run through Ruftrade.

Henrik Lynggaard wrote a good explanation of the MAGX.INF file in simple
language most of us should easily understand. I've neatened it up, corrected
one or two things and post it here.

Note: I don't think that Henrik's Email address is valid any longer -does anyone know where he is or has he vanished from the Comms scene?

==========
Date: 12 Apr 97 from Henrik Lynggaard
Subj: MAGX.INF translation
---------[N.MISC.MAGIC]----------

The "MAGX.INF" file is an ASCII file and can therefore be edited with a normal editor. The configuration of MagiC is done via keywords/commands. A keyword is given in the form #_??? , where the ??? names the keyword. Lines beginning with ';' are comments and ignored by MagiC:

The following keywords are legal:

#_APP
Tells MagiC the path of the START folder. e.g. for Appline and Start-Me-Up.

example 1 #_APP C:\GEMSYS\START\
example 2 #_APP C:\AUTO\APPS\

#_ACC
Tells MagiC where you keep accessories.

example C:\ACC\

#_AUT
Tells MagiC if a program should be loaded before the desktop. The boot process will not continue until after the program has terminated. Useful for login/password programs.

example C:\BIN\LOGIN.PRG

#_BUF
Tells MagiC the size of the buffer that is used by shel_write and shel_read. Size is given in bytes.

example #_BUF 4192

#_TXT
Tell MagiC which font and what height are used in menus, dialogs, and so on. The height is set by MagiC using vst_heigt, and that gives 4=6*6 font, 6=8*8 font 13=8*16 font and 266*32 font. A height of 0 yields the default value, and a font-id of 1 equals the system font.
Naturally there may only be ONE #_txt statement.

example 1 #_TXT 0 0 1 ; standard
example 2 #_TXT 12 4 98 ; gemini font

#_WND
Tells MagiC how many windows may be open simultaniously. Max value is 64. Note that the higher values require more memory.

example #_WND 16

#_FSL 0 <*.ex1>,<*.ex2>;<*.ex3>,<*.ex4>...
You can now also define your own set of extensions in the magx.inf file for MagxDesk's inbuilt file selector.

example #_FSL 0 *.JPG,*.JPEG;*.PRG,*.APP

This defines two extensions, one called "*.JPG,*.JPEG" and the other called "*.APP,*.PRG" - the correct extension can be selected by clicking on the extension field and selecting the right one from the popup.

If you enter an extension in the edit field that is already defined in the magx.inf file then the correct extension set is chosen.

#_TSL
Gives the timeslice priority and length of a timeslice, in preemptive multitasking.

Length gives the length of one timeslice in x*5 ms. Priority gives the background application priority in the form 1/x.

If this keyword is missing then MagiC switches back to cooperative multitasking.

Since the MagiC config ACC/CPX module is started later than this file, a trick is to omit this keyword, thus having the bootprocess running in cooperative mode and when the ACC/CPX is run it switches to preemptive mode. This can help avoiding timing problems, "Out of memory" and other errors during bootup.

example #_TSL 2 32 ; gives timeslice length of 2*5 ms = 10 ms, and a background priority of 1/32

#_SCP
Gives the clipboard path. (normally C:\CLIPBRD). Cleanly written programs can read this setting with scrp_read().

example C:\CLIPBRD\

#_TRM
This tells which program should be used for running TOS programs in a window. If a TOS program is started with shel_write(), then MagiC automatically runs this program, so that the output from the TOS program doesn't mess up the screen display.

example #_TRM C:\GEMSYS\GEMDESK\VT52.PRG

#_SHL
This tells MagiC which program should be run as the desktop.

example C:\THING\THING.APP

#_ENV
This lets you define environment variable in the form =.
There may be as many #_ENV statments as you like. MagiC constructs an environmental string containing all the definitions. This string can be

read using shel_envrn().

example 1 #_ENV AVSERVER=THING
example 2 #_ENV PATH=C:\BIN\;C:\

#_FLG
The bitvector tells MagiC about the 3D style, window gadgets and other
appearance switches.

BIT 0: (logo)
logo on right side (clear)
logo on left side (set)
(value 1)

BIT 1: (3D look)
turned on (clear)
turned off (set)
(value 2)

Bit 2: (backdrop gadget)
backdrop window using gadget (clear)
backdrop window using move (window title) bar (set)

Setting this bit has the result that a brief click on the name field
causes a window to drop to the back. That is almost like AES 4.x,
except for the fact that MagiC deals with it transparently when the
program doesn't specifically support it.
(value 4)

since magic 4:
BIT 3: (window title)
also draw the window title in 3D (clear)
only 2D (set)
(value 8)

BIT 4: (window title text)
draw the text in the window title as 3D (set)
only 2D (clear)

this only works on color displays >16 colours
(value 16)

since magic 5:
BIT 5: (real time srolling)
Alternates the control key while window slidering.
That is that setting this bit allows for the realtime scrolling
of windows to be deactivated by holding the control key while
scrolling.
(value 32)

To set the wanted flags add up the values of the bits that are set, and
pass the result as parameter for the #_FLG keyword.

example #_FLG 5

logo links 1
No backdrop 4

Henrik's note: [according to Tommy Andersen, then there is a new CPX module
for setting these values, included in the new magic 5.10]

#_DEV
This gives the VDI-device number, and in Falcon modes and with Graphics
cards there is an additional number. This number must be written in an
editor otherwise the Magx.inf file is not read. On installation the
#_DEV keyword is not written into MAGX.INF, this happens when you
choose save in the "change resolution" dialog.

#_CTR
The lines of MagiC variables must end in a #_CTR, this tells magic that
the following data should be read directly into the shell-buffer, left
behind is the data for the control module and the desktop (MagxDesk).
The data for the desktop begins 128 bytes after the #a and have as the
first keyword #_DSK. (the 128 bytes is an old TOS convention).

IMPORTANT. the line #d has such a length that the total length
including the control module data is 128 bytes. Because some editors
strip spaces at the end of lines, there is a ';' as last character
instead of a space.

Henrik's note: [don't edit anything between the #_CTR and the #_DSK]

New in Magic 5:
Magx.inf is loaded directly after the bootup. That is, after the
initialisation of the VDI, It is by the AES only reread and then discarded.
During a resolution change Magx.inf is reread, this time being only read by
the AES.

If the file contains a faulty line, it is displayed on the screen. It can
naturally not happen in an alert box, because the AES isn't initialized.

Since MagiC 5.01 there is a new (optional) paragraph heading '#[aes]'.
With the following line the information to the AES begins. If this heading is
missing it is assumed that it appeared before the first line.

Since magic 5.01 the paragraph heading '#[vfat]'.
The information after this heading is used straight after booting and
execution of the AUTO & XTENSION folder.

The following line must begin with the keyword "drives=".
The following drive letters (small or capital) names the drives that use long
filenames:

example drives=Ifh

For each drive given an 'unmount' is executed. This means that it is possible
even for the boot drive to permanently use long filenames.
This entry in the MAGX.INF comes from the "permanent" setting in VFATCONF.
`------This concludes the MAGX.INF translation

Cheers from Denmark

f>
f> What I do not understand is, that German companies provide German web
f> pages but no English ones. Not that you can download a full version
f> of this site but a downloadable demo of a current program from an
f> English site would be O.K. And its not too much effort to translate
f> it.

It can be true that the translation of the program itself can be relatively quick, and easy for users to do if all the text is held in an RSC and not embedded in the executable, but the effort involved in translating the documentation can take a very long time in my experience.

It's also true to say, to my certain knowledge, that the English upgrade to Papyrus v4 was translated in little more than a weekend once the job was started. I don't know how long the manual update took (some cruel people would say twenty minutes... <g>).

f> So is there someone who wants to translate German software to
f> English?

Within the last year or so three people have joined together to do translations under the banner of TransAction - they are Joe Connor (obviously for InterActive shareware support), Peter West (who is German himself and has done STGuide, IdealList and many others, including commercial stuff) and Mick Lock (PacShell and the recent long-awaited HSModem docs). I chip in as well if the docs are relatively small and the job is neatly self-contained, but I struggle for time and motivation tbh.

Also, since my mate Tom Thomason in Sweden translated the latest Interface for distribution in the UK by Floppyshop (quick plug <g>) it may be that we get more translations done in the near future - I certainly hope so. David Rutherford started the Shutdown-for Magic v1.6 translation a while back - I completed it and Peter W has just checked it over, so there's certainly some teamwork going on to get more translations done.

f> I am not able because my English is too bad

Not so bad. I just reposted one of your translations to English in csast!

f> and most of the native speakers in England, France, the U.S. or
f> wherever have problems with words like "Zeichenauswahlbox".

The combination of RufTrade, a German-to-English dictionary and the
realisation that most German words are combined from simple components
doesn't make it too hard:

zeichen character
auswahl selection
box box

How difficult can it be B^{)

Atari is dead. It died when JTS merged with it. The question is, will
a new company called Atari, with the spirt of old, will come into
being. The worse thing that will happen is that the Atari name and
some old Atari games will come out in new updated software titles.
Hasbro isn't a stupid little company.

I have a selection of Atari ST titles for sale.

This List Updated 13/3/1998.

email: steve@steverosie.demon.co.uk

I'm looking out for the following, possible swap, part exchange etc...
Atari CD ROMS, 16-bit sampler cartridge/hardware etc...

All are on original media.

Key:
ds = double sided disks
ss = single sided disks
?d = number of disks
meg = one meg of memory or more needed
ni = no instructions
nb = no box
NSTE = Not STE compatable

Please Note The Key Codes Are Only There For Guidance, I cannot be
responsable for in accuracies.

>>>>>>>>>> All prices are in UK Pounds (sterling) <<<<<<<<<<
^^^

Prices DO NOT include postage.

GAME COMPILATIONS

Hollywood Collection (5d,ni) 5

It just wont switch to 256 colors at all. Saving the res settings does no good.

> >BTW I copied both disks to my hard drive and reinstalled MagiC from there.
> >It reinstalled in a matter of seconds! :-)

> Yes, but does it work now? :-)

It sort of works a little, but no better than if I install from the original
floppies. I'll try the "no extras" install again.

Thanks for the reply,
Happy Festivus,
Dave

Face facts people. The Lynx, Jaguar, and ST were all better than their
competition, yet all bombed. I got burnt a number of times by buying
Atari. Don't get your hopes up for a new and improved anything with
the Atari name.

Roy,
I started with a 1040 st, and a few years ago went to a Mega 2, and
for over 10 years on both systems had great success with Dr.T's KCS.
Because it's written in machine language, the program is very fast and
uses a lot less RAM than other programs suggested in previous
responses. (So it should run well on your Mega 1).

Dr.T doesn't exist anymore, or at least has ceased all support for
Atari computers, so you can't buy from them, but if you'll contact me
via e-mail, I can probably help you out. KCS also has it's own
multi-tasking environment with instrument editors, music
printing/publishing software, SMPTE interfaces...etc. and I have quite
a few of those programs also. I also have DigiDesigns Sound Designer,
and Soft-Synth programs and other miscellaneous Atari software.

Good luck, my e-mail address is jimboling@mindspring.com

> Hasbro isn't a stupid little company.

The problem with everyone's speculations as to whether or not "Atari" can rise from the ashes is...public perception. I spent 13 years as a video game/computer software store manager. Up until a year and 1/2 ago. Problem is that right now the public, by and large, perceive the company called "Atari" (and they DON'T know the difference between Midway's Atari and Hasbro's Atari!) is for the most part a has-been company. An outfit that makes sucky products that are now being cleared out for $50 per console at a toy store chain. A company that used to be cool, but can no longer cut the mustard.

Obviously, NOT MY OPINION. But, realistically, the opinion of the vast majority of folks who spend $$$$$'s out there, and aren't "in the know". Mention Atari to anyone who owns a PSX or N64, and they start talking about the VCS they have in their attic. They would not dream that you could be talking about anything after that!

Obviously, for the name "ATARI" to become a powerhouse name once more, it will take more than a cook, killer console. It will take lots of well-done PR, probably in "stealth" mode (the public can't be aware that they're trying to have their hearts won back over to the name once more). Part of me thinks it will be much, MUCH easier to turn a new, different name into a powerhouse than it will be to find a way to rehabilitate the public's opinion's of an outfit called "Atari".

No, Hasbro will do much better pushing the trademarks of the GAMES that have names that folks fondly remember: Centipede, Warlords, Asteroids, etc. Even Yar's Revenge (which started life as a Star Castle home version) is still held in high regard with many folks going down memory lane. New versions or collections with these have a much better chance of making back the 5 mill that Hasbro spent, IMHO. Unless the public starts getting tired of the new 90's versions of old games. How far can that go, exactly?

Well, it's a commercial product, so Interactive won't be handling it,
although there is a connection.

It should be available from all the usual vendors worldwide that handle
English versions of German products in due course I would imagine.

Best regards
Mike Kerslake

I see no reason why it wouldn't work, I think Charlie was just pointing
out that you can't connect tot he Atari using a parallell port, SCSI is
a standard, you can get SCSI host adaptors so it should work fine.

Oops! Forgot to comment on this...

XMEN_MGR is found in C:\GEMSYS\MAGIC\UTILITY\EXTRAS\

The program you are running afterhittingthe desktop obviously requires this
to be present, so copy it into your AUTO\APPS folder (or wherever you've got
#_APP pointing to in MAGX.INF).

Don't tell me that Hasbro is going to reintroduce the Jag console in it
current technelogical form considering that the Playstation kicks it and now
is in it's last legs of the product life cycle.

What really gets me is they seem to have paid $5 million for $45 million in Atari debt (and of course, the technology). They _really_ paid $50 million for the assets. They are obviously planning to do something real with it, simply suing for patent and copyright infringement and selling licensing won't generate that kind of revenue.

Secondly, I am puzzled by the omission of the TT in the hardware listing. I gues they just hit on the biggies (though I would think there are more TTs than Falcons), or is the TT an "ST".

I'm _still_ glad I sold the stock as soon as I came back up to break-even. JTS isn't looking too healthy is it?

Hi,

Here is a list of what I have forsale.

All machines come with all cables unless otherwise stated.

AMIGA's

A500's do not have A520 modulator.Some Kickstart Disks available.

1 x CDTV with CDTV keyboard, attachment to allow normal mice and joysticks
to be used, 256k ram card fitted in front slot and external disk drive with
some CD's

1 x CDTV with CDTV keyboard, CDTV Mouse and external disk drive but
requires new CIA chip comes with some CD's
1 x CD32 with games can be used with an SVGA monitor.

1 x A500 with 1Mb Kickstart 1.3 / 2.0 with flick switch, average condition.
1 x A500 with 1Mb Kiskstart 1.3, as new in original packaging very light
use.
1 x A500Plus with 1Mb Kiskstart 2.0 good condition.
1 x A500 512k with Kickstart 1.3 good condtion.

1 x A590 20Mb HD for A500's with 2Mb Ram built in, good condition but
requires PSU, PSU for CD32 works as it is the same. This is installed with
Kickstart 1.3 and 2.0

1 x GVPA530 30Mb HD with 68EC030 accelerator with 4Mb of 32-bit Ram fitted,
also has 286 PC-Board built in, has all cables and is in very good
condition, is installed with kickstart 2.0

1 x A520 modulator.

1 x Philips CM8833-II monitor in good condition fully working.
1 x Philips CM8833-II monitor problem with tube otherwise good condition.

ATARI

1 x Atari 520STFM with some games and mouse.

ARCHIMEDES

1 x Archimedes A310 with 1Mb Ram and 20Mb internal HD, comes with Archimdes
RGB monitor.
1 x Archimedes A310 with 4Mb Ram with 1 x 40Mb external HD and 1 x 20Mb
internal HD, comes with Archimdes RGB monitor

Offers accepted on any or all of the above hardware. Be sensible though please....

James.

5227. Jazz drives

Newsgroup: comp.sys.atari.st
Date: 1998-03-14 00:00:00 UTC
From: dwmoar <dwmoar@teleport.com>
Message-ID: <350AC515.6C520A08@teleport.com>
Source record: 105571

Was up on IO Megas home page today and saw the following

Jazï¿½ 2GB raises the performance standard for
removable storage speed and capacity.

Newest Member of Jaz Family Handles Even Your
Most Demanding Applications

Double the storage space...Up to 40%
faster...Backward compatible...Ultra-fast
performance...Still a handy 4-inch square.

The newest addition to Iomega Corporation's
award-winning Jaz family, the Jaz 2GB
drive and Jaz 2GB disks provide you with an
incredible, high-performance storage
solution ï¿½ and even more space for your PC or
Mac stuff. With this expansion of the
Jaz product line, Iomega continues to set the
industry standard for removable storage
products that offer you maximum performance,
speed and capacityï¿½all at a
competitive price.

Jaz 2GB Drives and Disksï¿½The Super-Fast,
Extremely Vast Personal Storage Driveï¿½

The new Jaz 2GB removable drive includes a
complete software suite, along with twice
the capacity and up to 40% faster performance
than the original Jaz drive. In addition,
Jaz 2GB drives are compatible with Jaz 1GB
disks, which protects the investment of the
million Jaz disks currently on the market.

has anyone got or seen one of these in action. Will it be possible to
connect it to the Atari and will something like HD Driver support it.
Just a thought.

HARDWARE (no manuals or software)

1.1040STf 1MB ram. TOS 1.4 This machine has an audio output jack (RCA female) so you
can plug in to your external amplifier. Listen to the robot voice or your games loud!! No need for a
pre-amp. Will go with its famous BEETLE mouse!. $65

5. SC 1224 color monitor. It needs detachable video cable $16 (I can give you one that needs
a connector at the other end (free).

6 . 5. SC 1224 color monitor. with non detachable video cable and power cable. works great. $25

SOFTWARE:

1. TRUE PAINT V 1.02 $15 Excellent drawing program; all resolutions and colors. Works in ALL
ataris. From B/W. to true color. Manual available.

2. ICD hard disk utilities Version: 6.2.3 2 disks no manual $10. I will send a list of the files upon request.

3. PHOTO SHOW 1.0 by It's all relative: Create multimedia presentations audio video; Also watch
kodak photo Cd's in PCD format. This prg. will go with PCD sampler vol CD-ROM $15 (Falcon).
Needs Multitos.

All OBO. Questions welcomed. If interested send ZIP code to ask UPS for charges.. For software I can
send it for $3.00 US. (If you are in the US; I am willing to send abroad also). Phil.

Also, you are welcome to check http://128.187.42.173/electro2.htm during this weekend. It has a couple of things about atari hardware and some comments. Regards, Fpinto.

The Zip code (important for the U.S.) was omitted from the package.
Some nice postal bloke over here took the time to identify my package
properly and it made it.

>
>I will not recommend dealing with Woller, and if you do then *insist*
>on using credit card or COD!

That is always the safest way to go with any of the dealers (except
for what I sell ofcourse:). Maybe this is a turn around point. Mail
order in the U.S. alone is a gamble anyway. You see a feather duster
on late night TV for $13.95 and order it on your visa. 10 weeks later
it arrives, but is available at Mervyns for $9.95 now without the
shipping cost:(. God forbid you order a oldie CD from a TV add. It
will be a classic ROCK CD before it arrives, and then you'll get 10
more to follow that you don't want.
>

>when the CD labeled 'N.AES 1.2' actually contained 1.1.7... And large

>parts of the CD is unreadable :-(I've sent a mail to Konstantin
>Woller about this, but so far no replies (surprise!).

The readme files says 1.1.5, and another doc says 1.1.6. I didn't get the CD version as I didn't want all the MiNT stuff. Maybe that is the difference between CD and floppy version? It looks like the readme files talk of a soon to be released update to the version that was included, but I can't really get the feel for what it says.
So far, it feels a little smoother than 1.X. The new windowing features are nice, but I have a lot of experimenting to do. I just purchased MagiC Mac 2.2 from ASH and window features under Thing look,feel and perform the same between both O/S's.
My Falcon could die with this AES and MiNT, and I would'nt regret ever using it.

Mike

Hi Bengy,

My order for an Afterburner and Nemesis (a long while ago) took quite some time too. These are both hi demand items, and i'm sure David sells all he can get. I think I was told that Titan may collect orders until a specific number is attained before manufacturing another batch, (or ordering as the case may be). So a lot of your wait may be just Titan waiting for the unit to be assembled by some poor sole trying to make a buck. It would be nice if Motorola manfactured the Afterburner and Nemesis, but I doubt that is the case.
Not to be negitive, but add about 15 days for Canadas customs to release the package as well. I haven't had any problems with private mails between the U.S. and Canada, but items from C' Direct and HOMA seem to get held up quite a while in customs for some reason. Maybe I was just having a bit of bad luck too.
I have a spare Nemesis. If you are in a hell fire hurry and have paid for yours, I would trust Titan to credit me for this one I could ship to you, or wait for the one you ordered to arrive. This is only if you really need the device. I know it's nice to get what you pay for right now, but other than going to an Atari Show and getting it first had, it is the best thing us Westerners have for an Atari hardware resource.

But Tim - was the 'product' not a roaring success - in my view these fine products failed to attract a very large market share solely due to the lack of 'marketing' - most people never even heard of 'Atari' other than for the older games machines that were well promoted in their time.

When the 'Trammels' got involved in their money laundering operation (at least that's how it seemed) they made absolutely no attempt to 'market' the product - which - upgraded a bit for the times - could be successfully marketed today.

Or am I reading it wrong ???

*** Expose Digitiser ?150***

Hi all,
I have got an Expose digitiser that works with the Atari Falcon.
It is very easy to fit and has worked with every piece of visual equipment
that I have plugged into it.
In fact the only reason why I am selling this beauty is because I no longer
have a Falcon.
If you are using your Falcon for graphics then you should be aware of the
Titan-Black scorpion range of Hardware and Software. This product
complements the brand new range of ground breaking hardware and software
which is already available and soon to be released for the Falcon.
These include;
Apex Media
Apex Alpha
Nemesis
Falcam and
Tripod.

Of course not. The Jaguar is a dead parrot. However it appear that Atari, the name and the ideal, will get yet another chance. Its possible that the Lynx may get a make over or that a cip or two from the Jaguar may get used in something but don't get your hopes up. I'm hoping for an updated Yars Revenge. :)

Thanks to all who have posted follow-ups or replied by e-mail. Thus
far, I have to report that ESS-Code still refuses to decode the files
in question. Regarding .exe extensions, changing them to lzh doesn't
seem to be the answer - I get:"This isn't an lzh file or is a damaged
lzh file!"

Hello,

if you are interested in experimenting with Highspeed Packet Radio
(9600bd) and want to save money instead of buying a $$$ 9k6 TNC, make
your own cheap&simple modem, developed by Chris - OE5DXL
At this moment there are drivers available for Atari (L2STX), PC DOS
(L2PCX) , PC Windows and LINUX.

(for atari ST the driver L2STX also can be used for 1200bd baycom alike
modems, PC users can use Baycom driver for 1k2 modems)

More info and files/links you can find on my webpage at:
http://www.qsl.net/pe1nib/index.html

Well first they bought Tiger Electronics not Atari? Why would they buy
both unless they had something planned, would be too much a waste of
money. Game.com is not moving on shelves too well. Perhaps they want to
do something in the way of video games but need a largely remembered
name like Atari. Suing for patent and copyright infingement could get
you good money depending on who or what is involvled. If it is simply
Jon Doe's Video Game Inc infinged on the patent of a design of
something totally meaningless by todays standard, you wouldnt get much,
but if it was Nintendo, Sony or Sega you could fetch more (Atari did
once already on Sega) especially if it had to do with something in the
Playstation console itself that couldnt be changed they could claim
damages millions and maybe make quite a bit of money.

Yep I never managed to get ICE working. I could make a ppp-connection
to my ISP but that was all.
Even off line I got some big troubles with News. Mail works pretty
well indeed. Furthermore Oasis isn't quite happy with the system
configuration I normally use on my TT and Hades (N.AES/MiNT/NVDI 4.11 r7).

>But I have tried all the readers you
>mention & Oasis2 is still for me :-/ the best. But do'nt use ICE, I use
>STinG ppp for connection and the superb NEWSwatch & POPwatch by gary priest
>to transfer mail/news to Oasis2, All the splendor of Oasis without the pain

Until recently I was using *Oasis 1.35*. I prefered this above *Newsie*.
Now I've discovered *Okami* my preference goes to this program.
IMHO *Okami* is for the moment , in conjunction with the superb _NEWSwatch_ and
POPwatch, the best News/Mail reader.
But watch out for the mailreaders _Mymail_, _Infitra_ and _aMail_.
These have all a very nice interface and looks very promishing.

The only way they could make any money with Jaguar anymore would be to get the Jag/Jag CD combo out at well under $100. That way they could attract some 3rd party developers to the CD, but IMO it is too late in the current generation to make enough that way, especially now that the Saturn will be officially canned at the end of the month. Another problem is power, the Jaguar is supposedly more powerful than Saturn (the Jag CD supposedly allows optimum access to this power) but is still is not at the level of Playstation in 3D. It probably could turn out convincing 2D platformers and 2D fighters though. I think a Project X liscense would be a better bet for the Atari name.

I was just thinking, NOW might be a good time to contact Hasbro and request they release the sources of all TOS versions and of other TOS software produced by Atari.

FreeTOS sounds like a good idea to persue and it would allow any capable authors to upgrade TOS 2.06/3.06 with better AES, serial routines and other essential patches, in a collective group like what is happening with FreeMiNT.

Hi Ross,
I had similiar problems with my Mega STE, and I gave up with it in
the end and use my STFM with no problems, I'll rephrase that, no serious
problems. I seem to remember in an earlier posting that some Mega STE's
have a serial port defect which is responsible for this file corruption,
and can be cured by fitting an upgrade chip. Maybe someone a little more
knowledgeable on the subject could help you.

In my case the corruption also occurred on the hard drive and
caused me untold hassle so I just use the Mega STE off line now and it
behaves impeccably.

Hope you get things sorted out.
Cheers

I went back to a NeoDesk 4/MagiC configuration with my TT. NeoDesk has proven to be more stable, icon editing is a LOT easier, screen redraws - esp. star-screened images in Calamus, are much, much faster than with MagicDesk/MagiC combination. The only thing I "miss" with MagicDesk is the ability to eject my SyQuest and Zip carts from the desk top :) - which beats having to drag the icon to the tash can like the Mac at work.

This is with a TT/Nova configuration.

Steve,

I will give it a try as I have access to a Zip Plus at work. I
currently have both a SyQuest EZ135 and a SCSI ZIP connected to my TT.
In theory the ZIP Plus should work with a TT or ST (with the appropriate
ACSI to SCSI converter).

Hi.

Anyone out there using the Band-in-a-Box software for the Atari? If so, HELP.

I'm having trouble saving a usable midifile from version 5 - I know it saves a type 1 file and I need a type 0 but I can change that with MidiMover. The problem is with a the Canvas.DK kit, in that while BiB plays ok through my system, when I try to save the song as a SMF onto disk, on inserting the disk into my file player I lose all the patch info and it insists on playing all tracks bar the drums on the bloody piano.

And while it make me sound as if I've got eighteen fingers, it's not quite the effect I want. All ideas welcome - with through the ng or email me direct. Ta.

SIPPs
> and not SIMMs. Either way, what do I need and where can I get it?

Your 1 meg STe has four 256K SIMMs installed. They are secured in place
with a small plastic locking tab on each side. Carefully release the
locking tabs and you'll be able to tilt and remove the SIMMs. Replace them
with four 1meg SIMMs and you'll have a 4mb STe.

Oh, yes.... don't forget to wear a grounding strap when handling the SIMMs.

AHA!!! That's part of my problem! The distribution on ftp.toad.com DOESN"T
have this insignia dirrectory, or the fsadrive.com, or the host.sys, or the
mouse.com. NO WONDER i couldn't get the E: drive to work. I can run the system
OK, using DR-DOS, and managed to make a working bootable c and d drive.

It works ok, but there are a coupla bugs, which host.sys and
fsadrive.com would probably cure! If there is some way you could get these
files to me, i would be very grateful indeed! Is there some way you could
zip them up and e-mail them to me, at:
bdc2@po.cwru.edu
Barring that, if you can get them anywhere, and let me know where,
I would get them. I have been going CRAZY trying to figure out why they
don't work right.

PS, I have tried to e-mail you several times, and they come back as
undeliverable.

Source record: 105443

Hi there!

Today I read in TOS, an ancient german ATARI magazine (issue 9/91)
about ODIN, an all ST(E) graphics adapter for many VGA resolutions
without opening the computer or even soldering.
It was a project of the TOS magazine and the swiss Marvin AG.
They promised to report more about it in issue 10/91, but
unfortunately I don't have this one.
I think a little software belongs to this adapter...

Can anybody remeber anything about ODIN? Does it exist? Would anybody
sell it for ...eh... a little amount of money?

Many thanks in advance,
Carsten

Hi!

Be careful! The mono detect pin would not be the problem (just connect it
to ground), but the TT-High Res. uses ECL voltage output instead of
TTL usually used by standard VGA graphics cards/monitors.
I even wanted to do this with my 17" monitor with 86kHz, but then I
remembered the ECL thing and did not want to crash my monitor or TT...

Hello!

ZIP plus works fine, once the ATARI detected it (only in 1 of 3
coldboots...)

Connected once properly, you can get transfer rates of over 1.5 MB/s!
Problems seem to have to do with the AutoDetect cable, don't know why
exactly.
The ATARI has to provide the Termination power!
That means you have to patch an original TT (I did so) or to connect any
other external SCSI device which provides TermPwr.
No problems concerning this when connected internally.

Witch FTP-Software do you use?
I also have problems with aFTP, the last release of, and ALL
releasase of STinG.

aFTP stucks after any upload. (Any FTP-Server)
I found only a end of any transfer by blast aFTP out of the memory.

Regards, Robert

Try Turtle for backup. It has a nice way of evading the 40 folder bug, but it
can still happen.

The Unofficial Okami version does support *NOS*. This version can be
found on the home page of *Jos den Bekker*: http://www.xs4all.nl/~josdb/okami.html
or on the Belgian ftp-site:
193.190.205.13 archive/atari/incoming/internet/okami133.zip

AFAIK the offical Okami version (v 0.30) doesn't support *NOS* so
make sure you have the right version.

In my experience, the only export module that I ever saw work
properly was for .IMG files, and even that only worked if the
original imported graphic was an .IMG

Good luck!

HI!
It is exiting news about hasbro purchasing atari. Here is a question for thought though..Does anybody think they will revive the ST<TT<Falcon stuff, or do you think it is strickly The GAME market? If they did decide to sopport the Atari computer plateforms , they should advirtise it as THE MIDI MUSIC machine(even tho you can do a Lot more on them)Myself, I prefer my Atari's for Midi over Mac or PC.The Timing is right there.What are your Comments?

My two cents:).

When I find one of these rogue files and it cannot be deleted, Kobold reports that it is still open until the machine is rebooted. Then, Kobold can delete the file. I thought this had something to do with 1), MiNT, 2), Thing (as thing crashes out to NDesk when trying to delete this file) 3), a problem with N_AES.
(Kobold 3.5 is way cool!:).

The file problem usually occurs if I try to delete a file before exiting NEWSie. Only once has it trashed a partition, my MiNT partition. Other than that, the only problem I have had was being able to delete a file.

I'll try to take a little more careful notes the next time I notice it.

Mike

Re: "Q on Hasbro/Atari", BACH@ATLANTIS-BBS.COM scribbled the following on 15 Mar 98 @ 17:53:41:

B> It is exiting news about hasbro purchasing atari.

But why? I keep seeing so much excitement out of people over this deal, but I don't quite understand why. Are all of the excited people game players, or do they really think this will have ANY effect on the computer line?

B> Here is a question for thought though..Does anybody think they will
B> revive the ST<TT<Falcon stuff, or do you think it is strickly The GAME
B> market?

I think there's about zero chance that they'll do anything with the computer market (other than maybe getting rid of it). At one time, there was room for competing computer types. That time is gone. Even Apple is having a hard time competing in this Windows world. Hasbro would be stupid to even try and revive the Atari computer market right now, unless they wanted to introduce a clone. But then, what would be the point of that?

It's a (possibly feeble) attempt at phonetically recreating the way
the aforementioned characters (Patsy in particular) pronounce
"sweetie". Has a sort-of throwaway quality and can be used with an
edge of malice :->

Something told me that post wasn't going to travel well...

I don't know what John is using to program Newsie, but I know from
experience that the standard c file routines in Lattice C are not
reliable. They appear to function correctly, much of the time, but
occasionally they fetch the wrong material or misplace the
filepointer. I had to change all the code on two projects to use the
gemdos file routines. They are solid in Lattice.

I think you got a point. Personaly I put my trust in one of the smaller
company like the new Milan, W&B or Medusa/Hades.

They "Hasbro" is a huge company, used to sell in big numbers. I don`t belive
they are going to make a computer that only have a userbase of a few
thousand. The game marked is a completely different story.

All I want is a fast TOS/MagiC compatible computer, and Power without the price. Who the
maker are? I don`t care!

cheers Joergen

> is talking about? Am I the only person on the planet who has no clue what
> this is about?
>

Possibly! ;)

Project X (I think it is also called Merlin) is a new game system
designed by VM Labs. Many former Atari people worked on the design,
including one or two of the engineers who designed the Jaguar and
Midsummer machines, and programmer Jeff Minter (Tempest 2000, Llamatron,
Defender 2000, and so on.) And Bill Rehbock, another former Atarian,
left his position at Sony to head up the recruitment of third party
developers for Project X.

The marketing model sounds similair to the 3DO - multiple manufacturers
sign a license to build hardware. There are supposedly several "Sony
sized" manufacturers already signed on, but the only one known at this
time is Phillips. They have said we will learn a lot more at E3.

It is the clear Atari connection to the hardware's designers that makes
many people feel like this console will be the unofficial heir to the
Atari legacy. In fact there was a rumor that Phillips was seeking to
license the Atari name from JTS for their model of the Project X
console. So while their is no concrete connection between Project X and
Hasbro's purchase, many of us hope that there will bo one eventually.

> called "Atari".

I've think you've got the right idea. Stealth PR is not a bad idea.
Besides, I think we can all safely say that Atari's public enemy #1 is
the press. Judging from the Jaguar press that was received, "Jag is not
64-bits" "Jag is 16-bit" "Jag uses two 32-bit processors in tandem"
yadda yadda yadda. Basically I think the Atari name needs to stay out of
gaming magazines since most of the writers for these magazines are
idiots.

Basically, good private PR and a big CES showing would be the prescribed
medicine.

I wouldn't get my hopes up for any more Atari Computers period. After all, Atari computers division lost all of their computer development team (that's the ST/TT and Falcon crowd), they'd either have to track down the old people (which have jobs elsewhere) or get new people (which would require training/learning time).

I think it far more likely that we'll see Atari games for the PC or other platforms, and possibly a re-release of the Lynx or something of the sort.

5287. Major hard disk problems

Newsgroup: comp.sys.atari.st
Date: 1998-03-15 00:00:00 UTC
From: greg_evans@delphi.com
Message-ID: <B1QoA9s.greg_evans@delphi.com>
Source record: 105475

My hard disk problems keep getting worse. My system had been stable for a while after some problems with my new 3.2gb hard drive. Now it is worse than ever. I just recently upgraded to HDDriver 7.12 and since then I keep getting corrupted directory entries, bad and lost clusters. I have partitioned the drive repeatedly with no success. Should I try smaller partitions? They are currently ~440 mb each. If I reduce them to 255 mb will my system be more stable?

Uwe, if you read this, what can you suggeste?

Greg

Precisely. Hasbro didn't become as big as they are by squandering their money on foolish ventures. Anybody who thinks this is going to revive the Atari computer market at all is being very naive. The best thing that could happen would be if they sold the computer division to a small company, as you suggested. Let it be someone's labor of love, because it's sure not going to be a big money maker for anyone. And it would almost surely be a money loser for Hasbro to try and do anything with.

CB> syquest when my previous driver (ICD 6.5.5 until an hour ago) would?
CB> Thanks. --

Hi Cory,

had the same problem here to get my CD-ROM detected: it's like a little baby
that you have to feed: tell it in the set-up menu there's a drive in ID nr.
somuch, then it finally will see it too :-)

I was used to the Hushi driver, which detects it all automatically...

Kinda strange that under HDDriver you can't *install* Metados from CD-tools,
while running with Hushi you can.... To be honest, it was the main reason NOT
to continue with HDD but stick with Hushi. Another thing that buggers me is
once HDD had a driver on my C: partition, I could remove it, but no longer get
a working Hushi-driver on my C:.... So now I'm booting with a Hushi driver from

Hi Jo,

dunno... I'm working with MagiC 5.01 and after I replaced the drivers for my
Matrix 1208 by NVDI-ones, it's got no problems with icons in Truecolor (icons
being max 256 colors anyway). Also the vector-icons in Freedom are no problemo.
When I was running the card with the Matrix drivers it was all garbage, but
then again, that was the driver's fault, not MagiC's!
This on my TT, can't speak for a Falcon...

It would be fun to see them try the home computer/game computer
concept again using an upgrade of one of the Atari platforms. I doubt
its going to happen. We'll probably just see software and if we do see
hardware it'll be something new.

Well I usually ignore items offered without a price , since I don't want to insult someone like the above does , and I prefer to avoid the abuse of someone who overvalues his equipment , but I'd give you $50 for the STe and the Compute books alone .

If there was a hardware problem with the Mega STE, I would expect it
to cause problems with ALL software. It doesn't. I can DL huge files
via ZMODEM and they arrive intact.

Since STING is the constant factor amongst all my internet software,
I have to assume there's a problem with STING. Maybe there's a
problem with my .CFG files, but the docs aren't specific enough to
allow me to start fiddling with them.

None of the icons appeared on Jinnee's desktop under Nova high-color. I just assumed it was a limitation of the demo (just a blank box is displayed... no colors).

Thanks for confirming the Nova problems with MagiC. This will force me to wait for the next English-language update. But it should work out well, as by that time Jinnee should be available, too. Perhaps many months away, but I can wait....

I never tried ppp-connect (i-connect?), and really don't want to at the
moment. But who knows in the future ;-)
If you have no experience with the internet, i guess you should stick to
sting at the moment. Many clients and good compatibility.
BTW, you stated you have a nemesized falcon with 16Mb and Geneva, so i
really recommend you to try mint/mint-net when you are more familiar with
the internet (and a bit of text-based unix stuff). I actually use n.aes
rather than geneva, but i've tried the r6 demo with free-mint 1.14.6, and
it works!..
Nice irc's and ftp's are avalaible for mint-net, and cab works nicely with
either geneva or n.aes.
Just my two words ;-)
Bye, bye.

This is correct but there is more to it. The memory is of fixed size, it is allocated, and it is released. It gets allocated when a new folder is visited but is only released when the process terminates.

>I ran into the problem while I was testing a hard disk backup program of mine.
>The program was cleanly opening and closing folders, I never had more than,
>say, a dozen folders opened at the same time, and still got the "Out of Internal
>Memory".

I wrote a little program many years ago which was supposed to list the entire contents of all files and directories on a partition which for our purposes here is the same as your hard disk backup program. It also fell foul of the 40 folder bug and I wanted to know why ...

As I said, the system maintains a fixed amount of memory for keeping track of folders that are open. Lets call these "slots". One slot gets allocated for each open folder. The slot is not deallocated when the folder is closed - only when the process terminates. That partially explains how quickly the bug crops up but the next part makes it much much worse ...

Each slot is owned by a process and cannot be shared with another process. The term process here means a proper tos process - ie we're talking basepages. As a matter of interest this is how I managed to trace the bug - by looking in my program's basepage and following the "parent basepage" pointer backwards to the original "1st" process. By

branching off from various (undocumented places) in process basepages I discovered they all had been allocated different slots for accessing the same particular path.

Rather a lot of mucking about and experimentation later enabled me to locate the "base" pointer for all the folder memory (iirc that wasn't too hard) and also some of the structure of the "slots" and a method for ascertaining which was the last (very hard). This in turn allowed me add code into my listing program which tested to see if the slots were nearly exhausted. If they were then I Malloc'd twice the current space, copied the current slots into the bottom half and overwrote the "root" pointer with the Malloc'd one. When the code detected over half the slots had been released then I copied it back, restored the last pointer and Free'd the memory. Naturally the above operations were recursive to whatever level was required by the listing program. It worked flawlessly.

So, in less technical terms this is what happens ...

System boots and this is a process. It scans C:\, C:\AUTO thus the system process takes 2 slots. The system never terminates so these are never released.

System process runs programs out of the auto folder. Each program is a process. If it stays resident any folders it accessed cannot be released so those slots are lost. For example, if an auto folder program scans C:\FRED\JIM\ and C:\BOB then stays resident it will take 4 more slots. Even looking in C:\ for a data file takes a slot iirc.

System process then brings up the aes which is another process. This scans C:\ for accessories taking another slot. If you have your accessories buried down in a folder then even more slots get taken (probably doubled because of the utility to do this will most likely look in there as well). The aes shell never terminates so these slots are lost.

The aes loads each accessory, each of which is a separate process that never terminates. Thus if any of these scan the contents of folders then all those slots get allocated and can never be released.

Then the desktop starts up. This is another process. The windows and the paths it opens take up slots and the desktop does not terminate. It's only a matter of time before the desktop swallows them all up triggering the "out of memory" alert which in this case does not refer to memory obtainable by Malloc.

You could go all day and be ok if you (or the programs you run) are only opening and closing the same folders and you don't exhaust the memory.

When the 40 folder bug strikes you'll be ok as long as you only access folders which have already been stored in slots. Any attempt to access a fresh folder (by you or a program you run/are running/is running in

the background ie accessory) "activates" the risk of hard disk corruption. I forget exactly what form the corruption takes but is most likely to involve the overwriting of an already allocated slot, or overwriting past the end of the slots into (iirc) the FAT or directory cache memory area. The corruption occurs when the (now garbage) contents of one of these cached areas gets written back onto the media, or more precisely, when the valid contents of a cached area gets written back to the wrong place on the media.

Thus, as soon as the bug appears the most preferable action to avoid corruption is to hit the reset button before the possibly corrupted cache gets written out to the media. Unfortunately the program which is running may not make enough error checks to discover there is a problem until too late.

>AFAIK, the problem was improved, but not suppressed, in earlier versions of TOS.

It was certain, imo, that they never fixed it. Simply averted it by having more slots and preventing the media corruption.

>Maybe someone has a reliable info on that?

Sadly, having fixed it on my tos 1.2 machine there was no way to produce a patch. Firstly, because it required each program to supply the extra slots although with such a serious bug I think people would have taken the time to implement the fix. Secondly, all of the locations to be accessed were undocumented and could only be determined manually.

Here endeth another essay! <G>

You might try adapting your file functions slightly. Assuming you've used the stdio FILE functions then something like this for example but obviously something similar can be used for the Tos file functions ...

```
bool
xfopen(fpp,fname,mode)
FILE **fpp;
char fname[];
char mode[];
{
if (*fpp != NULL) {
/* corrupted pointer or an attempt to open
* the file more than once.
*/
form_alert(1,"[3][fopen() cockup][oops]");
return false;
}
*fpp = fopen(fname,mode);
return *fpp ? true : false;
}

bool
xfclose(fpp)
FILE **fpp;
```

```
{
if (*fpp == NULL) {
/* already closed or source code bug which
* zeroed the pointer.
*/
form_alert(1,"[3][fclose() cockup][oops]");
return false;
}
fclose(*fpp);
*fpp = NULL;
return true;
}
```

Hmm, I have a very vague recollection of something similar to this
ocurring in one of my programs once which was due to Fseek() -
possibly passing it a negative value. Can't be more sure than that I'm
sad to say. :-(

5317. Converting Disk Images

Newsgroup: comp.sys.atari.st
Date: 1998-03-15 00:00:00 UTC
From: Tim Curtis <sexsymbol@execpc.com>
Message-ID: <6egfi5$lns@newsops.execpc.com>
Source record: 105533

Here's one I can't figure out -

When using an ST emulator such as PaCifiST there are a lot of disk images available on the web. I believe there is a utility that comes with the program that lets you make disk images of Atari disks for use with the emulator, but is there a way that you can copy the disk images to a disk that can be used in an ST?

Is it even legal to do any of this?

Tim

5318. Tiger Road

Newsgroup: comp.sys.atari.st

Was the game Tiger Road ever released on the ST? I remember this game fondly from my arcade days and I can't seem to find it on any platform. I believe it was released for the Amiga, but I don't know about the Atari.

Thanks,

Tim

This is the best explanation I've ever seen about any TOS bug, Keep up the good work! Saving this article now!

I tried Geneva 006 (demo) and it was *much* better than MagiC and
N.AES. So there are room for improvements :-) There were still some
minor problems, but I think those are related to apps and not the AES.

>frustrating!

There is *Oasis 1.35*, *Oasis 2* and *Okami v1.33*

As for _Oasis 1.35_ I should say it works but contains lots of bugs.
I've used it for years. Supports SLIP and PPP.

Oasis 2.?: I never succeeded to use this but there are reports that it
works reasonable well. Supports SLIP and PPP (this part doesn't seems
to work for most of us)

Okami v1.33: Is an offliner. To retrieve news/mail you can make use
of the superb *NEWswatch* and *POPwatch* of Gary Priest. Both utilities
works very well with STing/STik or MiNT/Mintnet/gluestik.

Hope this help
Martin

I haven't play much with it (no time) but I could send a message but
somehow the message contained only the header and the signature.
Furthermore retrieving mails seems not to work quite well.
It download the mails but I don't get an EOF (of something like that).
So at the end of the downlaod the only thing I can do is kill the
process.

My configuration:
Hades 060, N.AES 1.1.0, FreeMiNT 1.14.6, Mintnet, gluestik 0.03b2,
NVDI 4.11 r7

Me too have a 2.1 GB IDE drive in a Hades 060 and I'm using HDDriver
7.10. The largest partition size is about 370 Mb. I do have from time
to time lost clusters but these are all coming from *Newsie*.
Somehow the _log file_ get corrupted. Since the day I threw away Newsie
the lost cluster problem is gone.

>you have no memory left! :-((

He, I reported this problem in a previous thread. On my Hades
I have this very annoying problem too. Viewing a large animated gif
with Cab it takes about 1 min before the 32 mb are all gone.

I've reported this to *Medusa Computersystem* but according to
Christoph Ashwanden the problem hasn't anything to do with *Nova VDI*.
Changing the loading order of the auto folder prg's should fix the
problem. I've try this but nothing helps.

IMHO, it can't be a problem of *CAB 2.5* as this problem
doesn't occur on my TT equiped with a *Crazy Dots II* graphic card
with NVDI 4.11 r7 as driver.

BTW: with the screensaver Twilight I have also the same problem when I
run for instance the *Nordsee 2000* module. But here takes it far more
time (at least 30 min) before teh Hades finally runs out of memory and
crashes.

Oeps almost forgot. On both machines I usualy run N.AES/freeMiNT
1.1.0/Thing 1.20. But the problem occurs also when I use *plainTOS* or
Geneva/Neodesk

Huh! I'd be tempted to think you have a bad archive (or bad
extraction) seeing that it was so willing to work for me.

What screen mode are you using? If it's a bit rare this could be
confusing Infitra in its early stages. I used TT Medium res.

It's a nice prog. Just a pity there is so much not there ATM which
makes it very difficult to compare with others.

Geneva, Neodesk, and MiNT work very well. Be sure to load a GEM.CNF
in Geneva with or without MiNT, if you do not do this some programs can
not find there RSC files.

I don't have any problems with 256 colors or above on my Cyrel, Sunrise
graphics card. But the author of CAB put in a special command to disable
transparency in GIFs. Animated GIFs work just fine.

There seems to be some trouble in using graphics cards with on board
hardware for some functions like panning and scrolling. It is these
options that are difficult to support in Atari VDI. Thus most programers
complain of bugs in the hardware instead of writing in the correct support.

5337. Re: Re^2: help with softPC

Newsgroup: comp.sys.atari.st
Date: 1998-03-16 00:00:00 UTC
From: bdc2@po.CWRU.Edu
Message-ID: <6ek0l6$io3$1@pale-rider.INS.CWRU.Edu>
Source record: 105302

In a previous article, bdc2@po.CWRU.Edu (Boris D. Cahan) says:

Well, i have some good news! I have just contacted someone at Insignia,
who is sending me a letter to the effect that they have no objections to
our posting a fixed complete version of softpc on the internet, as long as
they are not expected to supply any technical support.
Additionally, he is trying to research the latest semi-official
version of softPC for the atari, and if he can find it will forward it to
me. Apparently, the person who headed the project is still working at
Insignia.

Yes, it works well, and it's fast too. You only have to fill in your
username, password, mail address and newsserver(s) and it should work..
Maybe there's a problem with NOVA compatibility? It runs fine on a
TT/CrazyDots in 256 colors.

A good thing is that it handles the ISO 8859 standard - one of the few
things I really miss in Newsie.

Erm, I joined the net *three* years ago (January 1995) with my Atari.
Admittedly with NOS and its original offline utils so it was a little
crude and there was no web access, but I was there. And that was a
result of reading a 10-page feature article in ST Format (December
1994), so a fair few others had already led the way. My guess is that
there were a few intrepid Atarians (to whom I take off my hat and
gratefully thank, along with all those who've developed software for
us since) in right at the beginning of the period when the net really
started to gain popularity.

It was hardly impossible to connect two years ago. My memory isn't
always wonderful but didn't we already have the early versions of the
WWW kit (ie STiK/CAB) by that time, as well as Oasis 1.x?

Oh, yes: mine's an STE/SM124, and no, the chamber isn't dark...

Over three years ago here..maybe 4, with a one meg FM...

>Admittedly with NOS and its original offline utils so it was a little
>crude and there was no web access, but I was there. And that was a

I had web access.. through a shell account...and CAB was released
about 3yrs ago wernt it?

>It was hardly impossible to connect two years ago. My memory isn't
>always wonderful but didn't we already have the early versions of the
>WWW kit (ie STiK/CAB) by that time, as well as Oasis 1.x?

We definatly had StiK..and Steve Adams the original author was on line
and helping the earlier users to configure and get set up.. I was
lucky enough to speak to him and he set me up and I NEVER had problems
with CAB or IRC from the very early days :)

Find it difficult scanning straight and keeping the document in place
when using a hand scanner? Then you need, Scanner and Mouse Pad with
'keep scanner straight' thingimajig.

The scanner pad (doubles up as mouse mat) is a large (more than easily

accomodates A4 size paper) pad which had a clear plastic sheet
attached under which yu place your document. Place the straight 'rule'
on top to hold down the document and to guide the scanner in a
straight line.

Want one? Well, I only have one - so contact me ASAP to reserve it.
offers in UKP invited...

Hi Lisa

To aid you in your quest for the illusive rodent with the extended
tail, some third party mice for the Ameaba have a switch underneath to
cater for de la Atari ST's. So might be worth trying Amiga newsgroups
as well.

I hope I have been of some help. If you are in the UK, let me know and
I will try and locate one for you.

Cheers! for now

Anyone interested in buying the following mags from me?

ST Review Magazines
With Disks (without - 33)
5, 7, 7, 21, 26, 27, 28, 29, 30, 30, 31, 32, 34, 35

ST User
Ranging from Volume 1 issue 1, to the last but one issue October 94.
Around 72 mags in total, including all cover disks where applicable.

ST World
All issues (even the ones from before it was called ST World)

I am contemplating selling my full sets of ST Applications, ST Revieww

and ST Formats - dunno yet - but make me a good offer and they will
probably be yours. ;)

Collection from Essex, London or manchester - otherwise a hefty
postage charge.

Not true, I used my Atari on the net in late 1994 and IIRC the software
was available since 1991-2.

For basic inexpensive text, I would recommend STorm. It is a little flaky
occassionally, but works fine 98% of the time. Free too.

I don't know if I'd classify the ST as a "cheap" design. After all, some prominent computer experts, including Dr. Jerry Pournelle, liked the ST more than the Amiga. However, it may be true that it was put to market too early. Early models didn't include the BliTTER, for example...

I suspect that what happened with the ST is that since Amiga was slipped out from under Atari by Commodore, they wanted to have a product to compete, and wanted to get to the market at or before the Amiga made it so that they would have a fighting chance.

One problem I had "decoding" files was that when I sent from an IBM
platform it didn't have Atari type carriage returns. I dumped it
into EDITPLUS and made sure it had both C/R & L/F.
This seems to clear up a lot of the problems I had previously.

It's already started in PC's, where the advice "buy as much machine as you can, to avoid obsolescence as long as you can" has been replaced by "buy as cheap as you can since the most expensive system will be obsolete next week anyway." Accordingly, the $1000 and under PC's have taken off by some estimates to equal up to %70 of sales. The only problem with seeing this extend to game consoles is that their $150 to $200 cost doesn't carry the sticker shock of PCs' considerably higher price tags, making a cheaper "oldie" console (a Super Nintendo, for instance) not that attractive to gamers demanding the latest.

>There is *Oasis 1.35*, *Oasis 2* and *Okami v1.33*

All three of these are supported by NEWSwatch for the actual on-line stuff.
Thus they can all be used over a STiK/STinG connection.

>As for _Oasis 1.35_ I should say it works but contains lots of bugs.
>I've used it for years. Supports SLIP and PPP.

This is still used by an awful lot of people.

>_Oasis 2.?_: I never succeeded to use this but there are reports that it
>works reasonable well. Supports SLIP and PPP (this part doesn't seems
>to work for most of us)

I use Oasis2 all the time. It's got a lot of bugs, but I've yet to find a
replacement that I like as much. Ignore the online TCP/IP stack that comes
with it (called ICE). It's very unreliable. Use NEWSwatch for the NEWS side,
and POPwatch for the EMAIL side. There is no need to use ICE at all.

>_Okami v1.33_: Is an offliner. To retrieve news/mail you can make use
>of the superb *NEWswatch* and *POPwatch* of Gary Priest. Both utilities
>works very well with STing/STik or MiNT/Mintnet/gluestik.

I've tried this. It's not a bad offliner. A little complicated to set up
(but aren't they all). I'd seriously try this or Oasis2.

Surprisingly enough, POPwatch and NEWSwatch can be found on my web site (URL
in the sig). :-))

I'd recommend NVDI. There are specific HP660C and 850C drivers (I don't know how the 672C printer compares with those two)

>Also i try to make some modifications into the driver, read code
>sequences out of the same win driver, it works, but correct?

That sounds like a lot of hard work, I tried to do the same thing by setting the printer into hex dump mode, which doesn't seem to be supported any more?

Yes there are problems with MagiC in modes over 256 colours. You will get the
same problems with regular TOS and all other OS replacements what I know of.

I'm also very interrested in getting this latest version becuase of this and
some other stuff, but I still havn't got it. :-\

Now I use a Nova with 5.11 and it works, it's just that the colour icons are
wrong apart from that there are no serious problems.

Did you enable the drive's SCSI ID in the HDDRUTIL tool? Basically there
are no problems at all with this drive and HDDRIVER.

Woppsss I forgot oen thing. Yesterday I found a very serious bug in Nova VDI.
I find it quite strange that noone else has reported of it. The bug has to do
with offscreen bitmaps and make CAB unusable.

If you load a page in CAB with an animated GIF, you can in horror see how
CAB grows and grows and grows ..... slowely eating up all your memory until
you have no memory left! :-((

If you run Big-DOS, MagiC or TOS 3.0 or newer 440 MByte per partition is
OK, smaller partitions won't change anything.

Your problem sounds like your drives not being properly terminated or
your cables having bad quality.

Hi,

There are hundreds of programs for making music and listening
to music which you can download at
http://www.hitsquad.com/smm/atari/

There is mainly ST software but there's also some for the
Falcon.

The site has software for midi, MOD, audio, recording,
multi-track, MPEG, soft synths, drum machines, guitar tuners,
samplers, patch editors/librarians, mp3 players, sequencers,
algorhythmic composition, and heaps more.

cheers,
jason.

That simply isn't true. The Atari ST was a cheap design. It was designed too quickly with no real innovation (try to think about the Sinclair QL, which was almost the same design and was produced 2 years before, or about the Amiga which was first introduced as a prototype a whole year before the ST).

The Tramiel management was very chaotic. They failed in marketing the computers. They also failed in designing them (come on, the Mega STs were more or less multi-megabyte memory STs in a new box, no magic here). They had this poor policy of making announcements about new designs years before actually producing them (or even not producing them).

Also, the Lynx was not created by them. It was bought from Epyx.

Granted, without the Tramiels, Atari's story would have been very different : we don't know who would have bought it back from Warner. But the Tramiels leading Atari was a total failure.

I never dreamed of JTS stocks nor playing poker with the Trimels, for that I'm to bad at poker, but Hasbro does sound/feel like a more solid buy, but I'll leave them to the investers. Personally I'd love to "invest" in a thing with a Atari logo on it, doesnt care if it's a portablegame, Tv-game, computer, "web surf box" or what ever, just for the support of the name!

The theories of what may turn up with the "name" on it is about the Jag and Lynx, some dream about another Falcon. But honestly aren't everyone talking about obsolete technology, sure it's loved by the enthusiasts, but the wide market wants Playstation and N64 or a Pentium 2 as a computer. What could be of interest is some "new stuff" but with the "name". I think we can skip the computer theorys and face the dreams of a console or handheld thats where the big bucks are. Or we will see Atari Classics as handhelds seld for $19 at your local fuel station... Only time will tell who are right (unless someone with inside information starts to post here..).

Another theory could be that they doesn't have any plans right now and only bought out Atari since it might be good to have someday.

|partitioned the drive repeatedly with no success. Should I try smaller
|partitions? They are currently ~440 mb each. If I reduce them to 255 mb
|will my system be more stable?

I have a 2.1 Gb IDE drive in a DirecT60 (Hades) and am also using HDDriver 7.12. The largest partition size is just under 498 Mb. I was not aware of any problems in day to day use but on three occasions Diamond Edge reported lost clusters and advised repair. After one repair Papyrus reported a particular file to be corrupted when I tried to open it. It may have been corrupted before the repair - I had not used it for a while.

In a followup to the original posting, Mike Grove suggested not using "enable generic SCSI devices" but I presume this will have no effect with an IDE drive.

Reverting to the hang-up when downloading files for offline reading, it
seems to occur more often than might be expected from a random spread of
file sizes. I notice that if I select a newsgroup with no outstanding
entries, a block size of three bytes flashes up, although I have not so
far had a hangup on this. Does a file transfer end with a 3-byte
handshake of some description, i.e. the actual file size has no direct
bearing on the problem, which is something like a missed handshake?

Try STING for a TCP/IP connection, but there is no NFS drive sharing available yet.

You can try ghostlink if one of your other machines is a PC, but in any case serial connections are slow. Ghostlink will mount your PC partitions onto your Atari desktop. You'll find it on ftp.lip6.fr/pub/atari

I haven't experienced what you describe. This must be due to the way Nova
and MagiC interact. I've found no memory problems whatsoever with CAB 2.5
and Nova VDI 2.61 (with or without Geneva). I've viewed some pretty big
animated GIFs, too.

Has anyone actually got the Infitra demo to work? No matter what I do I can't get it to run. I've changed the paths in infitra.cfg correctly and it still won't work (even running it with no cfg file resident). The program appears to initialize and then locks up, with 'Infitra' appearing in the top-left corner. It's like it's 'almost' there but not quite.

According to Iomega's pages, the normal Zip drive's maximum transfer rate
is 1.4MB/s. On my TT with HDDriver/Kobold that maximum seems to be
reached (this based on timing the transfer of a 10MB scan). I almost
bought a Zip Plus but thought, perhaps incorrectly, that its extra speed
couldn't be used. But I'm not sure what the TT's maximum transfer rate is.

>it.

At times NEWSie has created havoc with my offline partition. Why I don't know, but the pattern seems to be after a 'net session in which multiple clients were used under multitasking. But I can't be anymore specific than that <g>. On two occasions the corruption was so bad that my TT crashed while accessing the partition from the desktop (I had to zero it, as Correct reported too many serious errors). During these sessions, the only other client that wrote to the partition was CAB, and it closed its disk-based cache correctly, so I can only point to NEWSie. Other times I don't even know the partition is corrupted until Kobold is summoned and reports problems (GEMDOS mode is more tolerant of the corruption). Whatever is happening, although rare, is very nasty.

From: agt3@york.ac.uk
Message-ID: <6ej605jej3@pump1.york.ac.uk>
Source record: 105413

Currently I am using ST-Modem to dial up the university here to get my connection, but the maximum speed is 9600 and I have a 14400 modem. Also ST-Modem seems to be unreliable on connection.

Are there any better, compact, ST modem programs out there. I've scanned the web and can't really find anything. STiK etc would be fine, but it is a bit big for my needs (I only have a 1040STF), and the connection cannot support web etc, since I have to log on to a UNIX machine. Text connection would be fine, just something a bit more user friendly and reliable on dial up then ST-Modem.

If anyone knows a way of doing ftp over the connection too that would be very handy...

Has anyone any advice/ideas.

Thanks
Aaron Turner

> >
> >Can any hardware geeks out there help me? I'm sure something like this
> >must have been built in the past...

There's once again an even more simple solution:

With a new host adapter at the ACSI port (LINK2) or a real SCSI port at TT
or Falcon you can build up a SCSI network with multi initiator function.

Simply connect PC (must have a SCSI card...) and the ATARI by a SCSI cable
(not to long, verify correct SCSI bus termination) and set the ATARIs SCSI
ID to 6 (or any other, but not 7) and use HDDRIVER.
Now you can access any SCSI drive formatted to DOS format (possible with
PC or ATARI->HDDRIVER) from both machines! Transfer rates of about 2MB/sec
with an TT or 1.5MB/sec with ST or Falcon are possible, no matter in which
machine the hard disk is installed.

The PC should run Win95, with 3.11 it crashes when the ATARI boots up...

Try it!

Carsten

My ratings are from a ZIP Plus connected to a TT, measuring done with
SCSITOOL's sector test option.
But even an normal ST can do so fast; don't know about a normal ZIP drive.

That's strange. I will test it with TOS as well and see what happpens. I don't not belive that it's a problem with MagiC. Also, are you _realy_ sure that you don't have any problems? As I said it takes a while before you run out of memory (several minutes depending on the size of the GIF and ofcourse how much memory you have) so it's not something you notice if you doen't have a continues update of your free ram. I have also read that someone else in here had the same problem.

Okay, I'm a little late (sorry!) but we did have a monthly winner at the DarkForce! BBS this month. Its:

Shannon Slone (Angle)

Of David, KY....

Congratulations, Shannon on winning a 3 volume/6 month subscription to Atari Computing!

You too could be a winner-just call The DarkForce! BBS once a month to qualify for the prize! Good luck... ;-)

5406. Help with doing an Atari Exhibition!

Newsgroup: comp.sys.atari.st

Okay, on short notice, I've been given the opportunity to "exhibit" some of my Atari hardware and software at a local meet. Well, its a "hobbyfest" with lots of different themes like game sessions including Magic: The Gathering, Star Wars, as well as Sci-Fi exhibits and lots of computing stuff...

I've rented a 10 foot x 5 foot area, complete with outlets. My younger brother is helping me, and we are going to show the following:

Lynx (with about 20 some games)
Jaguar (with the CD unit and around 30 games)
Atari 1040 ST with SC1224 monitor, SH204 hard drive (I'm using this for the retro-effect, "look what we had in 1985/6")
Falcon (DeskTopper case, Nemesis, 17" monitor, lots of those great demos like Lost Blubb, Joint Venture, Dream Dimension, etc,...)

Its at the Jenny Wiley State Resort Park Lodge, and there are over 40 exhibits arlready booked for this 10am till 7pm single day event. I've got quite a few flyers from Toad, Chro-Magic, Systems For Tomorrow, and the Computer Dungeon, that I'll have for the interested public...Its this Saturday, the 21st...

Now, here is my question! Can any of you who have experience with these shows give me some helpful hints and pointers? I've never done a show like this, and would appreciate any and all help. Problems to watch out for - would be helpful, too! Thanks in advance...(and wish me luck!) <grin>
